

■ Make a Quiz Game in HTML!

Grade 1 Coding Lesson

Learn HTML • Build Your Own Quiz • Have Fun!

■ Subject: Coding / HTML

■ Grade: 1

■ Duration: 45 mins

■ What You Will Learn

- What HTML is and why it is cool
- How HTML tags work (like dabba / tiffin boxes!)
- How to build a page skeleton using `<html>` and `<body>`
- How to add a question using a heading tag
- How to create clickable answer buttons
- How to open your file in a browser (the magic chashma!)

■ What is HTML?

Like talking to your computer!

HTML stands for **HyperText Markup Language**. It is a special language that tells your computer how to show words and pictures on a page — like magic words!

■ Tags are like Dabbas!

Just like tiffin boxes (dabbas) hold your food, HTML **tags** hold your words and pictures inside them. Every tag has an opening and a closing!

■ The Page Skeleton

Every HTML page has the same starting bones!

Here is how every HTML page starts:

```
<html>

  <body>

    Your content goes here!

  </body>

</html>
```

Tag	What It Does	Like...
<html>	The big container for everything	The whole tiffin bag
<body>	Holds what you see on the page	The dabba inside the bag

⇒■ Try It! Build Your Page Skeleton

Can you write (or say out loud) the page skeleton? Start with `<html>`, then `<body>`, then `</body>`, and finally `</html>`.

Hint: Remember — every tag that opens must close! `<body>` closes with `</body>`

■ Add Your Quiz Question

Use a heading tag to make it big and bold!

To show your question in big letters, use the **<h1>** tag. This makes text look like a book title — large and important!

```
<html>

  <body>

    <h1>What colour is the Ashoka Chakra?</h1>

  </body>

</html>
```

⇒ ■ Try It! Add Your Question

Write your own question inside **<h1>** and **</h1>** tags.

Examples:

- What festival is the Festival of Lights?
- How many seasons does India have?
- What is India's national animal?

■ Adding Buttons for Answers

Like a KBC buzzer — click to answer!

The **<button>** tag makes a clickable button on your page — just like the buzzers on Kaun Banega Crorepati! You can also use a **<p>** tag to give players instructions.

```
<html>

  <body>

    <h1>What colour is the Ashoka Chakra?</h1>

    <p>Choose the correct answer:</p>

    <button>Blue</button>

    <button>Green</button>

  </body>

</html>
```

⇒ ■ Try It! Add Your Buttons

Make two `<button>` tags for your two answer choices!

For the Ashoka Chakra question, try: **Blue** and **Green**

For the Festival of Lights question, try: **Diwali** and **Holi**

■■ Open Your File in the Browser

Your magic chashma to see code come alive!

Step 1	Save your file with a .html ending e.g. MyQuiz.html
Step 2	Find your file on the computer
Step 3	Double-click it — it opens in your browser!

Step 4

See your quiz page — Wah! ■

■ Mini Challenge: Make YOUR Quiz!

You can do it — Wah! ■

Festival of Lights Quiz ■

Question: What festival is the Festival of Lights?

Options: <button>Diwali</button> <button>Holi</button>

■ **Correct Answer: Diwali**

Seasons of India Quiz ■

Question: How many seasons does India have?

Options: <button>Four</button> <button>Two</button>

■ **Correct Answer: Four**

■ Your Own Question — Make it up!

Think of a fun question about India, animals, or your favourite subject!

Write it inside <h1> ... </h1> tags.

Then make two <button> tags for your answer choices. Go for it! ■

■ Look What You Learned!

You are a coding dost now!

HTML is like talking to your computer!

HTML tells the browser what to show on the page — like magic words!

Tags are dabbas (tiffin boxes)!

Tags open and close to hold your content inside — neat and tidy!

Made a page skeleton!

You built your first page with `<html>` and `<body>` tags.

Added a big question!

You used `<h1>` to make your quiz question look like a book title!

Created answer buttons!

You made clickable `<button>` tags — like KBC buzzers!

Opened your file in the browser!

The browser is your magic chashma that shows your code come alive!

■ Next Steps & Keep Coding!

- Keep making fun quiz games and explore more HTML tags!
- Try changing the question — can you make a quiz about animals or colours?
- Practice every day — even 10 minutes makes you better!
- Whenever you get stuck, ask your teacher, didi, or bhaiya. Coding is more fun together!
