

Grade 2 Coding — Scratch: Backgrounds & Scenes

Let's Begin!

What Are Backgrounds?

Backgrounds are pictures that show where your story or game happens. Every Scratch project has a stage, and the background fills that stage with colour and life!

Did You Know?

In Scratch, backgrounds are called "Backdrops." You can choose from the library, upload a photo, or even draw your own!

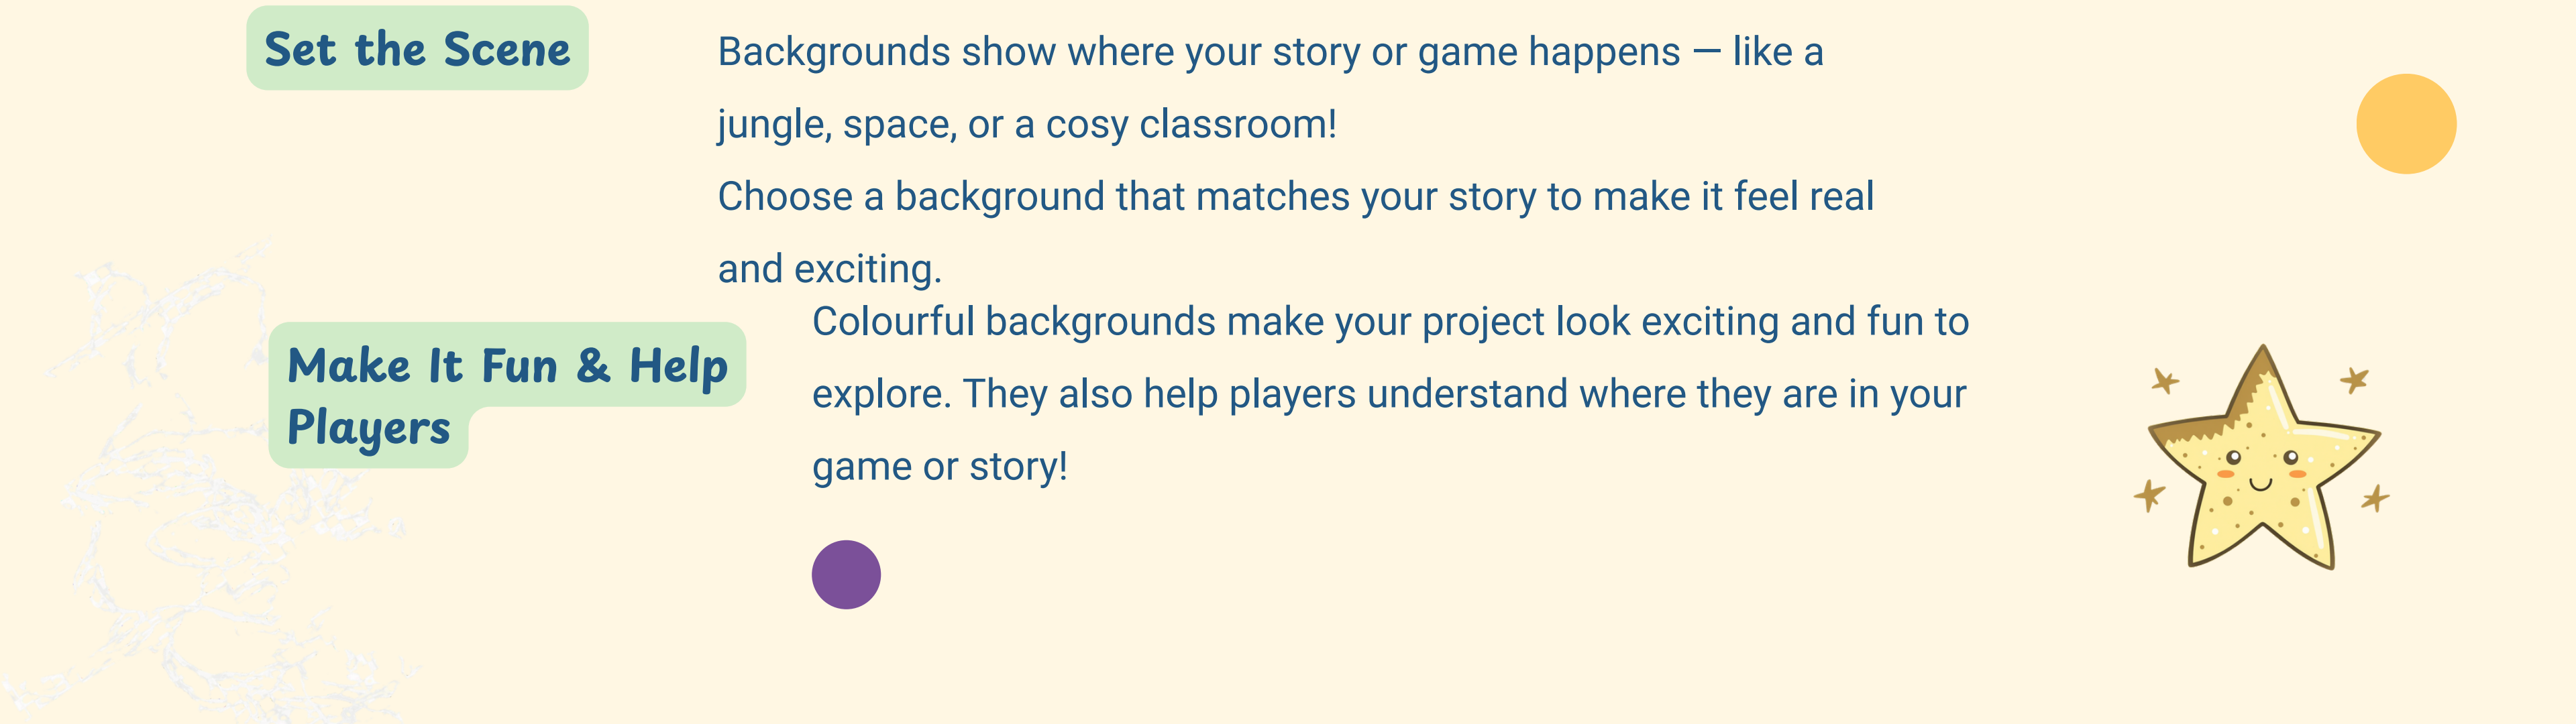

Why Use Backgrounds?

Set the Scene

Backgrounds show where your story or game happens — like a jungle, space, or a cosy classroom!

Choose a background that matches your story to make it feel real and exciting.

Make It Fun & Help Players

Colourful backgrounds make your project look exciting and fun to explore. They also help players understand where they are in your game or story!

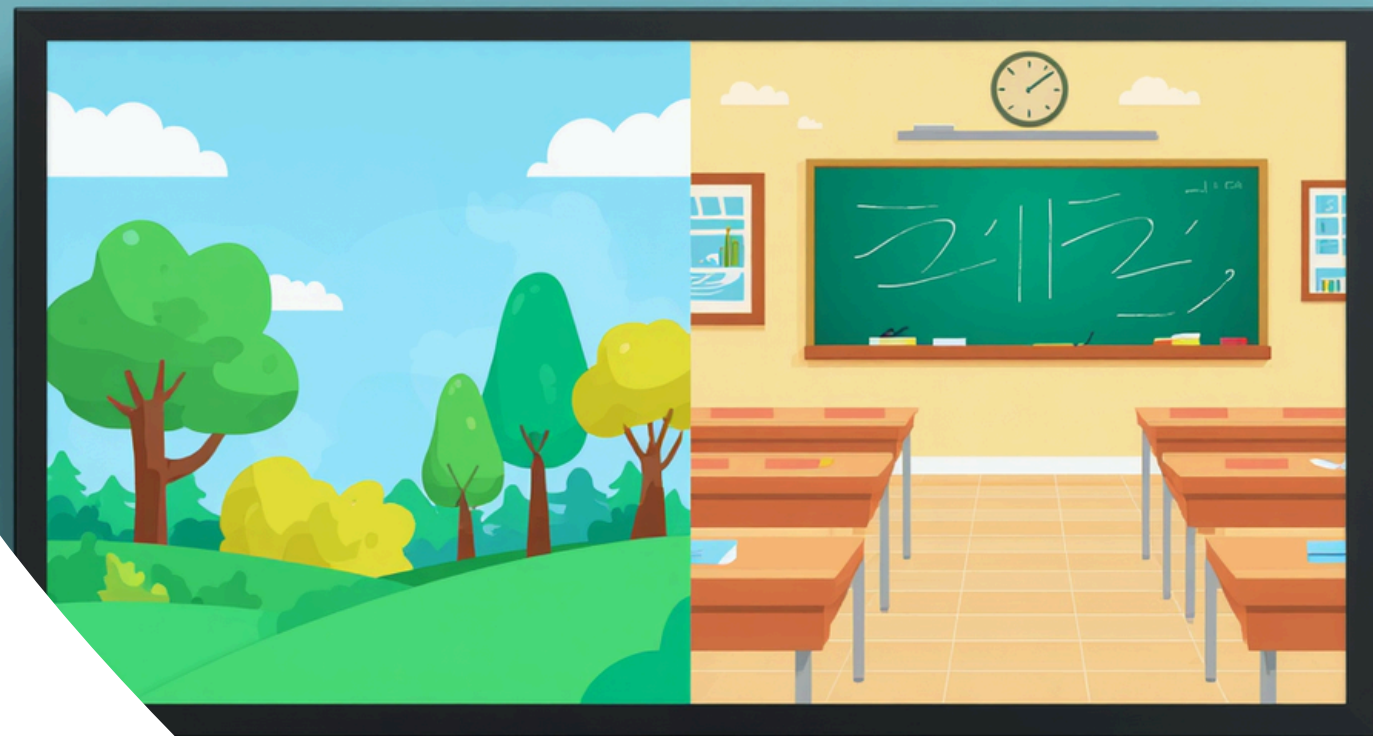

Adding Backgrounds in Scratch

- ✓ Click the "Choose a Backdrop" button
- ✓ Pick a picture from the library or upload your own
- ✓ Click to add it to your project
- ✓ See it appear behind your sprites!

Try It Now

What Are Scenes?

Scenes are like different pages in your story, each with its own background. Every scene shows a new place or moment in your project!

Scenes = Different Backgrounds

Just like a book has different pages, your Scratch project can have different scenes — each with a unique backdrop to tell your story step by step!

Using Scenes to Tell Stories

Start Scene

Introduce your characters and setting — let the audience know where the story begins!

Use a bright, welcoming background to set the mood for your project.

Middle & Ending Scenes

Middle scene — Show the action or problem your character faces. Ending scene — Reveal how the story finishes with a new backdrop!

Switching Backgrounds

In Scratch, you can change the background of your project using a special block. This lets you switch scenes and tell exciting stories!

Switch Backdrop Block

Use the "switch backdrop to [name]" block in your scripts. Place it wherever you want the scene to change — like when a character moves or a button is clicked!

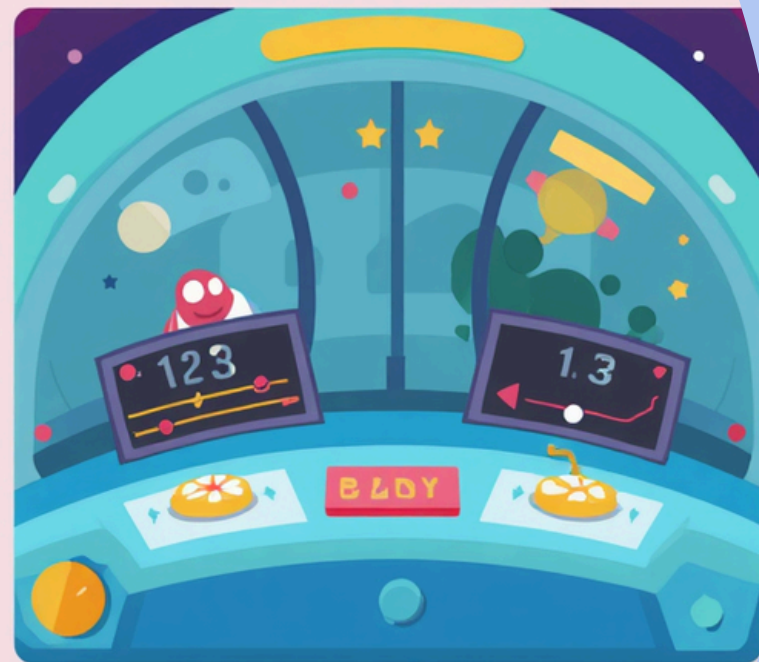

Example Project: A Day at the Park

This project uses a park background to tell a fun story. Watch how the characters come alive in a sunny park setting!

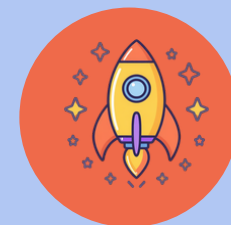

Project Spotlight

A Scratch project featuring a bright park backdrop with animated characters playing, walking, and talking — all made by a Grade 2 student!

Example Project: Space Adventure

See how scenes help us travel from one place to another! This project switches from a starry space background to the inside of a spaceship — telling an exciting story.

Scene Switching in Action

Scenes help us travel from space to inside the spaceship! Each backdrop tells a different part of the adventure using the "switch backdrop" block.

Tips for Choosing Backgrounds

- ✓ Pick bright and colourful pictures
- ✓ Choose backgrounds that match your story
- ✓ Use different backgrounds for different scenes
- ✓ Try drawing your own backdrop!

Let's Try!

Practice Time!

Create Your Own Scene

Now it's your turn! Open Scratch, add a background, and switch scenes. Use your favourite place or dream location to tell your own story!

Your Challenge

Add a background, switch to a second scene, and place a sprite in your project. Share your creation with the class!

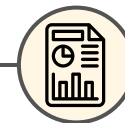

Recap: What We Learned Today!

Great Work!

Backgrounds Show Location

Backgrounds are pictures that show where your story or game happens in Scratch!

Scenes Tell Stories

Scenes are different backgrounds used to tell each part of your story — like pages in a book!

Easy to Add & Switch!

You can add and switch backgrounds easily in Scratch using the backdrop library and switch block!

Be Creative with Backgrounds & Scenes!

Every great Scratch project starts with a spark of imagination. Your backgrounds and scenes bring your stories to life in colourful, exciting ways!

"Your Imagination is the Limit!"

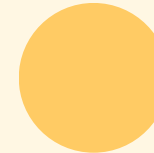

Dream up any place — a jungle, outer space, or your own backyard — and paint it into your Scratch project. The more creative you are, the more amazing your project will be!

Next Steps for Young Coders!

Add More Scenes

Try adding more scenes to your Scratch projects
Use different backdrops to make your story more exciting!

Draw & Share

Experiment with drawing your own backgrounds in Scratch. Then share your amazing Scratch project with friends and family!

Thank You!

Thank you for coding with us! Keep creating and having fun.
You did an amazing job today!
