

Sorting & Classifying with AI & Digital Tools

A fun lesson and activity sheet for young learners

1. What is Sorting?

Sorting means putting things in order or into groups. We sort toys, clothes, and books every day!

Why do we sort things?

Sorting helps us find things quickly and keep things neat.

- Find toys faster
- Keep our rooms clean
- Share things easily with friends

2. Ways We Can Sort Things

Toys	Colour, size, or type (blocks, cars, puzzles)
Clothes	Type, colour (light/dark), or season
Books	Size, topic, or author/series

3. What is Classifying?

Classifying means putting things into groups that are alike. For example, all the animals with four legs can be put into one group!

4. Sorting & Classifying with Computers and AI

Computers sort and classify to help us find information fast. For example, a computer can sort photos by date or by the faces in them.

AI (Artificial Intelligence) learns to sort and classify by looking for patterns. For example, AI can look at pictures of animals and sort them by type — cat, dog, or bird.

How AI sorting helps us every day:

- Finds information quickly online
- Helps apps recognise photos

- Makes games smarter and more fun
- Helps doctors and scientists

5. New Words to Remember

Word	What it means
Sort	To put things in order or into groups.
Classify	To put things into groups that are alike.
Pattern	Something that repeats or is similar, that helps us notice things.
AI (Artificial Intelligence)	A computer program that can learn to recognise things and make decisions.

6. Activity: Sorting Challenge

Look around your room. Pick 8-10 toys, books, or items of clothing. Sort them into groups using ONE of the ways below. Write your groups in the boxes.

Sort by COLOUR

Sort by SIZE

Sort by TYPE

Think about it: What makes each group the same? Could you sort the same items in a different way too?

7. Activity: Be the AI!

AI sorts pictures by looking for patterns. Pretend you are an AI computer. Below are some items. Write which GROUP each item belongs to (for example: Animal, Toy, Food, Clothing).

Item	Group it belongs to
Apple	
Teddy bear	
Dog	
T-shirt	
Banana	
Toy car	
Cat	
Socks	
Orange	
Building blocks	

8. Think and Share

What is one thing in your house that is NOT sorted, but should be?

If you were an AI, how would you teach a computer to tell the difference between a cat and a dog?

Name one app or device that you think uses AI to sort things.

Great work! Keep sorting, classifying, and exploring every day!
