

COLORING MY DIGITAL IDENTITY!

Building My First HTML Profile Page 🎨💻

An Amazing Code Adventure for Little Explorers! ✨

From Plain to Playful! ✨

Welcome back, young code explorers! Look at this blank, empty website screen canvas. It looks so sad and quiet, doesn't it?

Today, we are going to learn how to change a blank page into a wonderful, colorful story about YOU! We will paint the screen with your favorite holiday shades, write out your name in giant letters, and show the world your favorite treats. Let's start the transformation game!

Before

A plain, boring black and white computer template page.

After

A bright, happy digital story card filled with your personal style colors!

Code Tags Are Our Dabbas!

Remember, to show words on a website, we must wrap them inside protective pairs called tags. Think of them as metal lunchbox tiffin containers!

Keeping Your Words Safe!

Just like your multi-tier steel school Dabba keeps your tasty afternoon paranthas or delicious treats safe and clean inside your bag, an HTML tag holds your words safe on the computer screen! You open the lid bracket with `<p>`, drop your text words inside, and snap the lid shut with a forward slash lock key `</p>`!

Painting Your Page Like Holi! 🎨

Let's bring some holiday celebration magic onto our screen! Our first magic styling command word is **background-color**.

Yellow Like Marigold Flowers! 🌻

We can use code to splash beautiful, bright colors all across our webpage background, exactly like throwing colorful powders on Holi! If you want your page background to turn bright yellow like marigold flowers used in festival decorations, you tell the body tag to wear a custom color outfit!

Step 1: Splash the Background!

Let's practice painting the main backdrop room of our profile page. Follow these steps:

1 Open up your workspace code playground editor panel and locate the main `<body>` tag.

2 Add the secret style paintbrush word directly inside the brackets by typing:

```
<body style="background-color: pink;">
```

3 Pick your absolute favorite shade from our safe child list: **red, blue, green, yellow, orange, pink, black, or white!**

Choose Your Sketch Pen Ink!

Now that our background wall looks beautiful, let's learn how to choose a colorful ink for our reading text words!

Red Like Yummy Mangoes!

Our second magic styling word is simply **color**. It works exactly like picking out your favorite colored sketch pen from your pencil box when highlighting titles in your school homework notebooks. Want your name to be painted red like ripe summer mangoes? Use the color command!

Your Profile Code Template

Here is your master layout script sheet to build your profile card frame step-by-step:

```
<body style="background-color: yellow;">

<h1 style="color: red;">Your Name</h1>

<p style="color: green;">My Favourite Food</p>

<p style="color: pink;">My Favourite Festival</p>

</body>
```

Pick custom combinations that show who YOU truly are! 🤝

Meet the Explorer Examples!

Let's peek inside the notebooks of two student code creators to see their finished profiles:

Profile 1: Meet Aanya!

Aanya paints her background **pink**. She styles her name title text in deep **green**. Next, she uses a **blue** sketch pen for her favorite food item box: "**Idlis**", and sets an **orange** ink for her festival text choice: "**Holi**"!

Profile 2: Meet Arjun!

Arjun splashes a sunny **yellow** background. He formats his bold title name in hot **red** ink. Then, he types out his absolute favorite yummy meal line: "**Paranthas**" using **green** code ink, and highlights his festival title: "**Diwali**" in a pretty **pink** text style!

Pop Quiz Time! 🧠

What is the secret styling command code word we write inside our tag boxes to change the color of our text words ink?

(A) background-color 🎨

Hint: No, background-color washes the massive wall behind your words, not the words themselves!

(B) color! 🖋️

Bingo! The word 'color' picks out your sketch pen ink for writing text lines! 🎉

(C) dabba 🍱

Hint: Dabba is our fun lunchbox comparison for code tags, not a style command!

Your Turn, Young Creators! 🚀

Now it's your turn to be a professional website architect! Launch your screen workspace panel and build your own identity profile page following these code rules:

🎨 Use only our safe primary color words: **red, blue, green, yellow, orange, pink, black, or white.**

🧱 Construct your page using only your three familiar tags: **<body>, <h1>, and <p>.**

✨ Proudly spell out your name, your favorite food dish, and your favorite festival celebration!

Digital Identity Builder!

Sensational job! You followed the layout steps perfectly, learned to paint screens with Holi colors, stored your information safely inside your code Dabbas, and earned your official coding master badge today! Keep on exploring and creating! 🚀
