

WHAT IS A WEBPAGE?

Physical Book vs Digital Page

Notebook Page

It is made of paper. You draw and write with a pencil or pen. You can touch and feel the pages!

Webpage

It lives on the screen. You can see colours, pictures, and words. You can change it anytime!

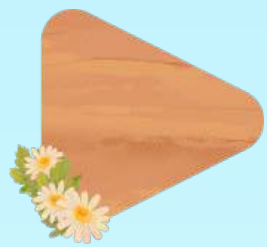

Meet Dev and Nia!

Dev and Nia make a colourful digital page. 🎨

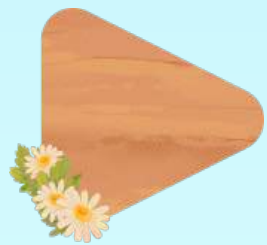

Want to join their adventure? Let's go!

What is a Webpage?

A webpage is like a digital drawing sheet! It has colours, pictures, and words – all on your screen.

You can change it anytime, and it lives on the computer screen. Just like your drawing book – but digital! 🎨

The Magic Browser Bus!

A browser is like a magic bus! 🚌
It travels the internet and brings
webpages right to your screen.
Just type an address and – zoom! –
your page arrives!

The Address Bar

Every house has a postal address code so the mailman can find it. Just like that the URL Address Bar is at the very top of your browser screen, it is a long white typing box where you can type

“www.google.com”

And it's like giving the magic bus the exact digital address of a webpage!

The Main Canvas

This is the main canvas where drawings
and words appear.
It is different from the address bar – this is
your open playground!

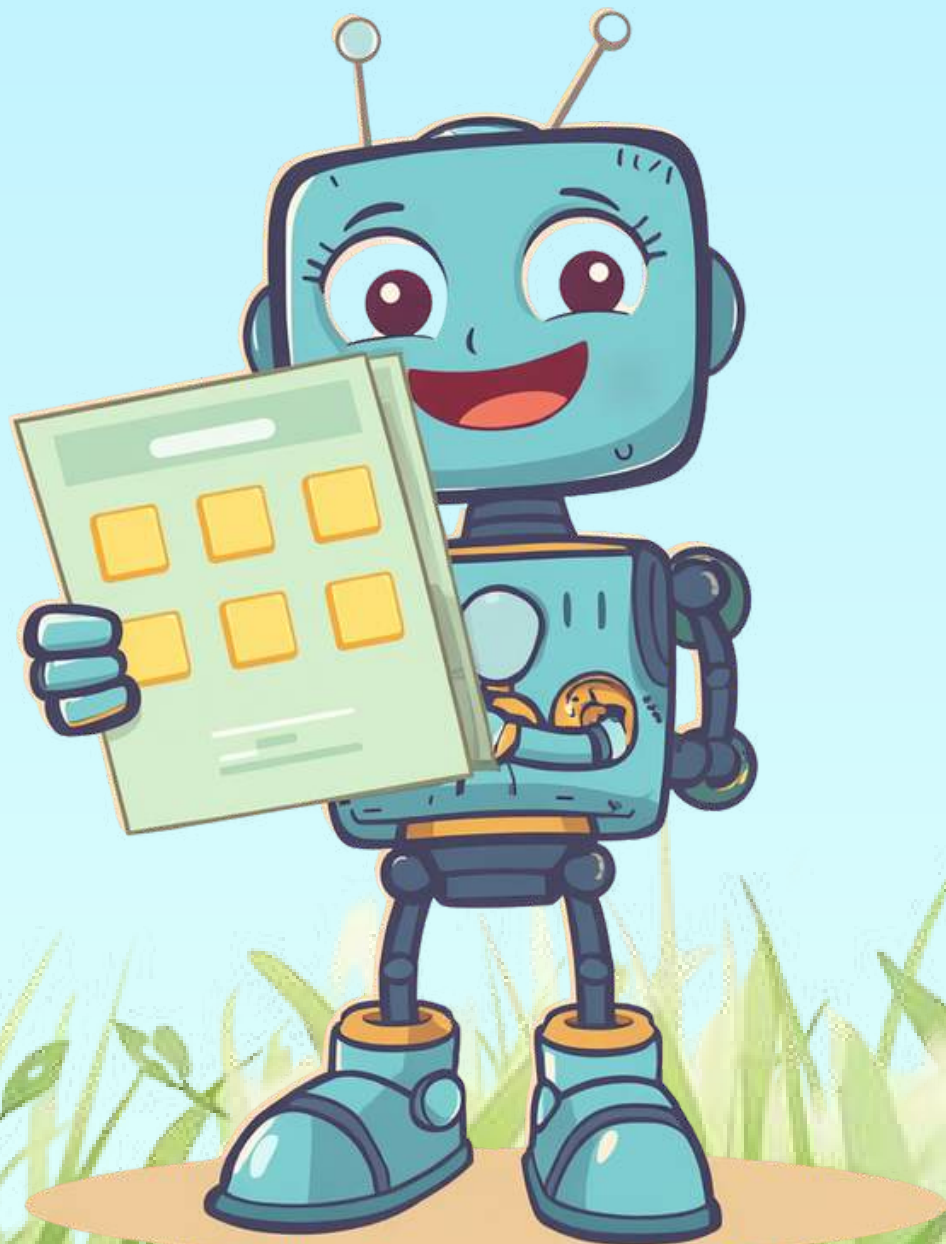

How Computers Read HTML

🤖 Secret Instructions!

A robot builder reads a special sheet called HTML.
It says: "Draw a title here! Put a picture there!"

✨ The Page Appears!

The computer follows the instructions and
draws the webpage on your screen!
HTML = Secret Drawing Instructions!

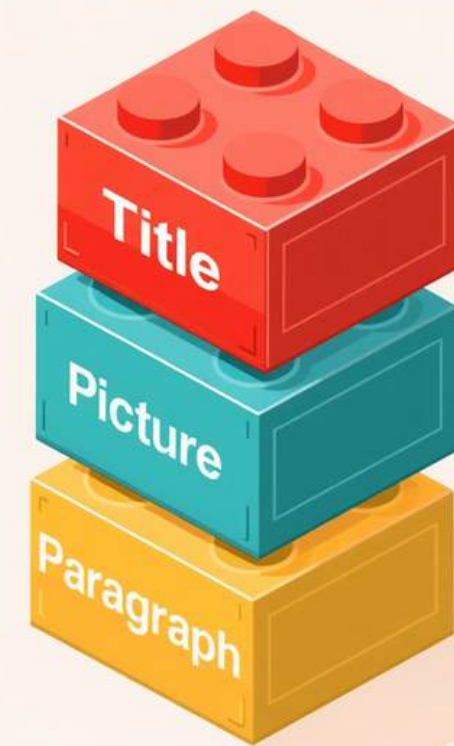

What are Tags?

Tags are special markers that tell the computer what to draw!

- Title Block – Makes big headings
- Picture Block – Shows images
- Paragraph Block – Adds words

Just like Lego blocks, you snap tags together to build a webpage!

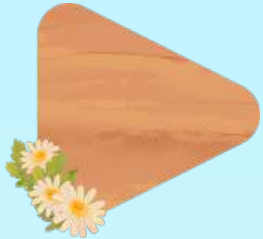

Try It Yourself!

SANDBOX LAYOUT GAME

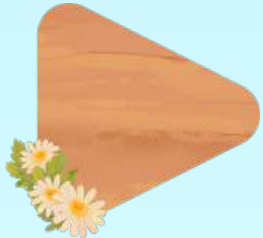

- 🧩 Drag blocks to make your own page!
- 🎨 Pick a Big Title Banner, an Image Block, and a Paragraph Box.
- ✨ Have fun playing with your digital drawing!

What We Learned!

🎨 Webpage = a digital drawing sheet!

🚌 Browser = a magic bus that brings pages to you!

🏠 URL = your home address on the internet!

🤖 HTML = secret instructions computers read to draw pages!

Celebration Time!

🏆 You earned a Curious Explorer badge!
Take home: Count website addresses you
see every day!
