

RENEWABLE ENERGY: SOLAR OVEN FUN!

FEELING THE HEAT FROM THE SUN!

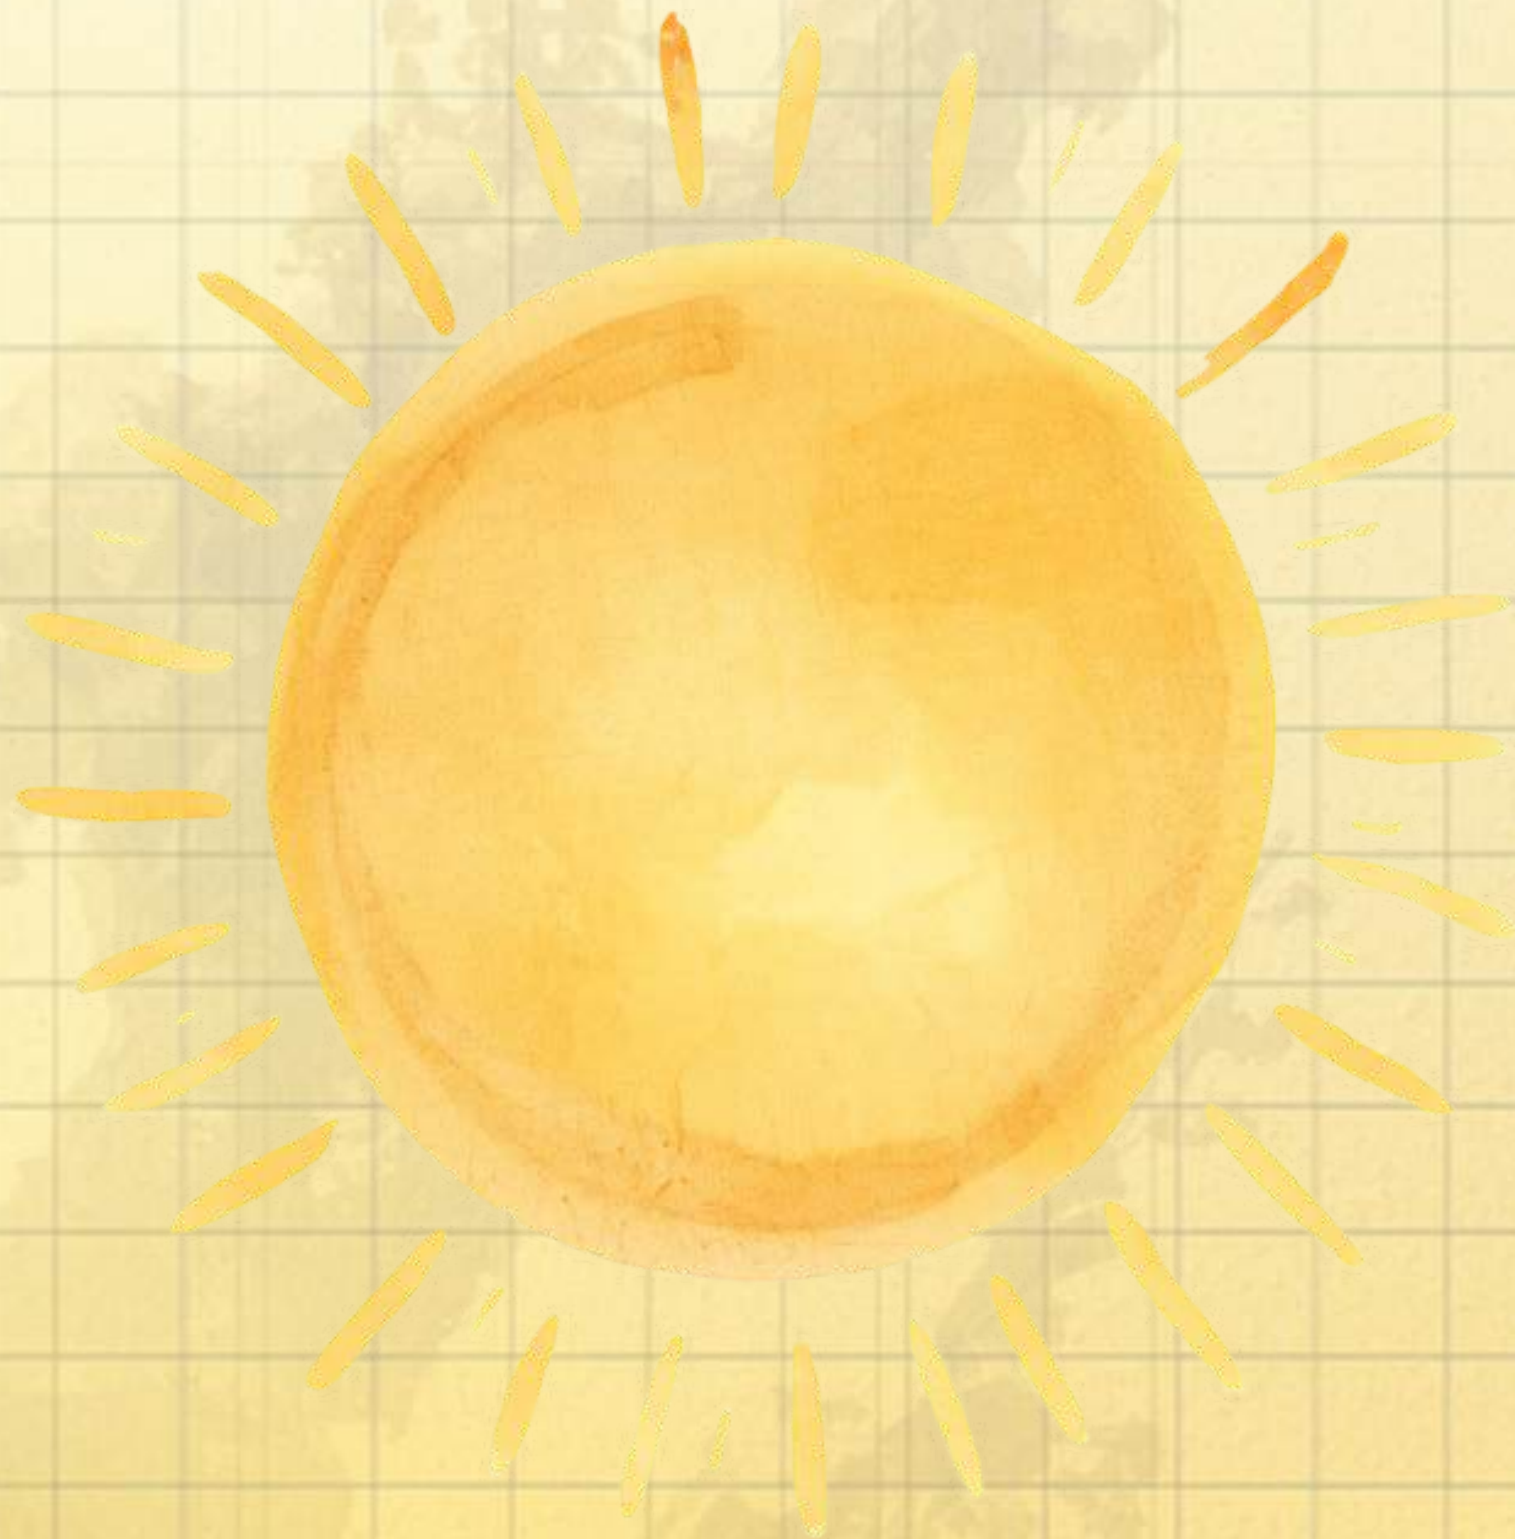

Have you ever stepped inside a car on a hot day? Or walked barefoot on a sunny terrace?

Why is it SO hot inside? ☀️

The sun's energy gets trapped — just like in a solar oven!

Turn to your neighbour and share: where have YOU felt the sun's heat the most?

WHAT IS RENEWABLE ENERGY?

Renewable energy means power from nature that never runs out — like the sun!

Think about your phone battery — it runs out and needs charging. But the sun? It shines every single day without needing a recharge!

The sun is a **FREE** and **FOREVER** source of energy. We can use its light and heat to do amazing things — like cook food in a solar oven!

MEET THE SOLAR OVEN'S 3 PARTS!

01

 **Aluminium Foil Flap**
"The Mirror Friend"
Bounces sunbeams
inside the oven to make
it super warm!

02

 **Plastic Wrap Cover**
"The Magic Trapdoor"
Lets sunlight in but
keeps all the lovely heat
trapped inside!

03

 **Black Paper Lining**
"The Heat Sponge"
Soaks up all the sun's
energy to warm our food
— just like magic!

LET'S BUILD OUR SOLAR OVEN!

01

♥ Line the Box

Stick black paper inside your box — this is the Heat Sponge that soaks up sunshine!

02

✨ Seal the Top

Stretch plastic wrap over the opening — our Magic Trapdoor traps all the warmth inside!

03

🪞 Add the Flap

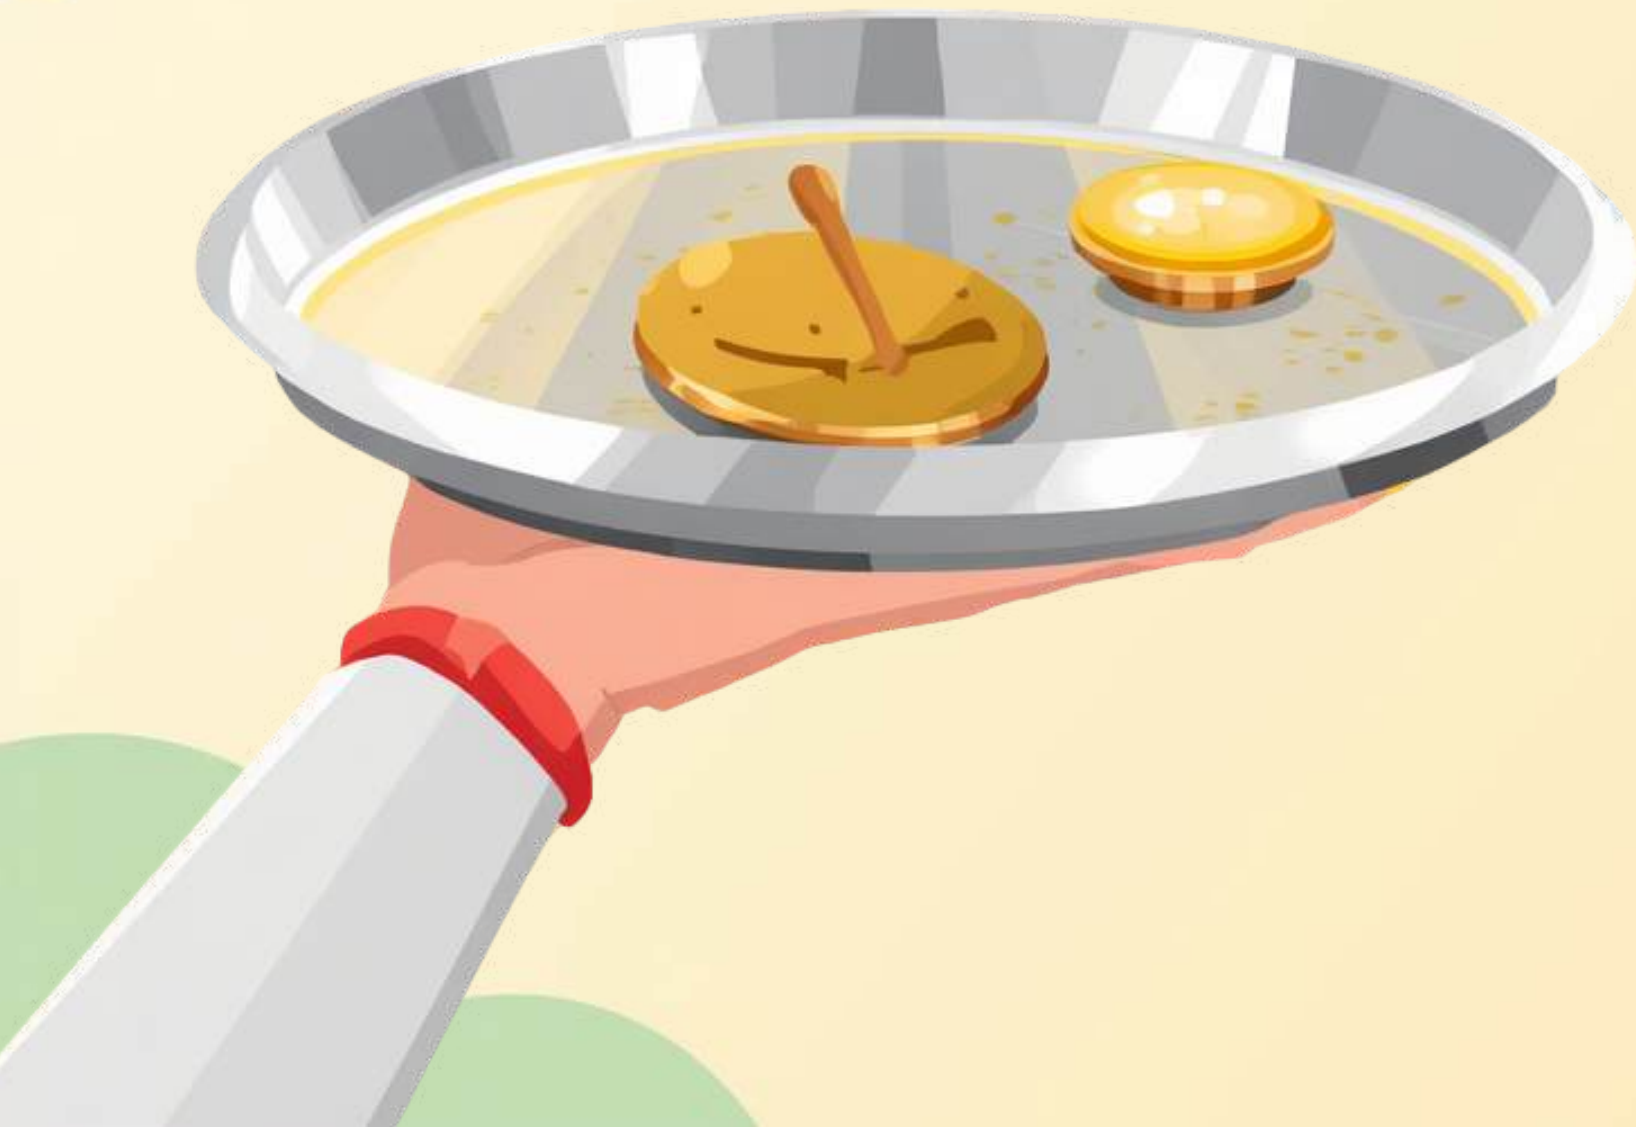

Angle the foil flap to catch sunlight and bounce it into the box — hello, Mirror Friend!

BOUNCING SUNLIGHT WITH A STEEL THALI!

"The thali bounces the sunlight just like the Mirror Friend in our solar oven!"

When sunlight hits a shiny surface like a steel thali, it bounces off — just like a ball bouncing off a wall. This is called reflection!

In our solar oven, the aluminium foil flap works the same way — it bounces and directs sunbeams inside the box to heat our food. Cool, right?

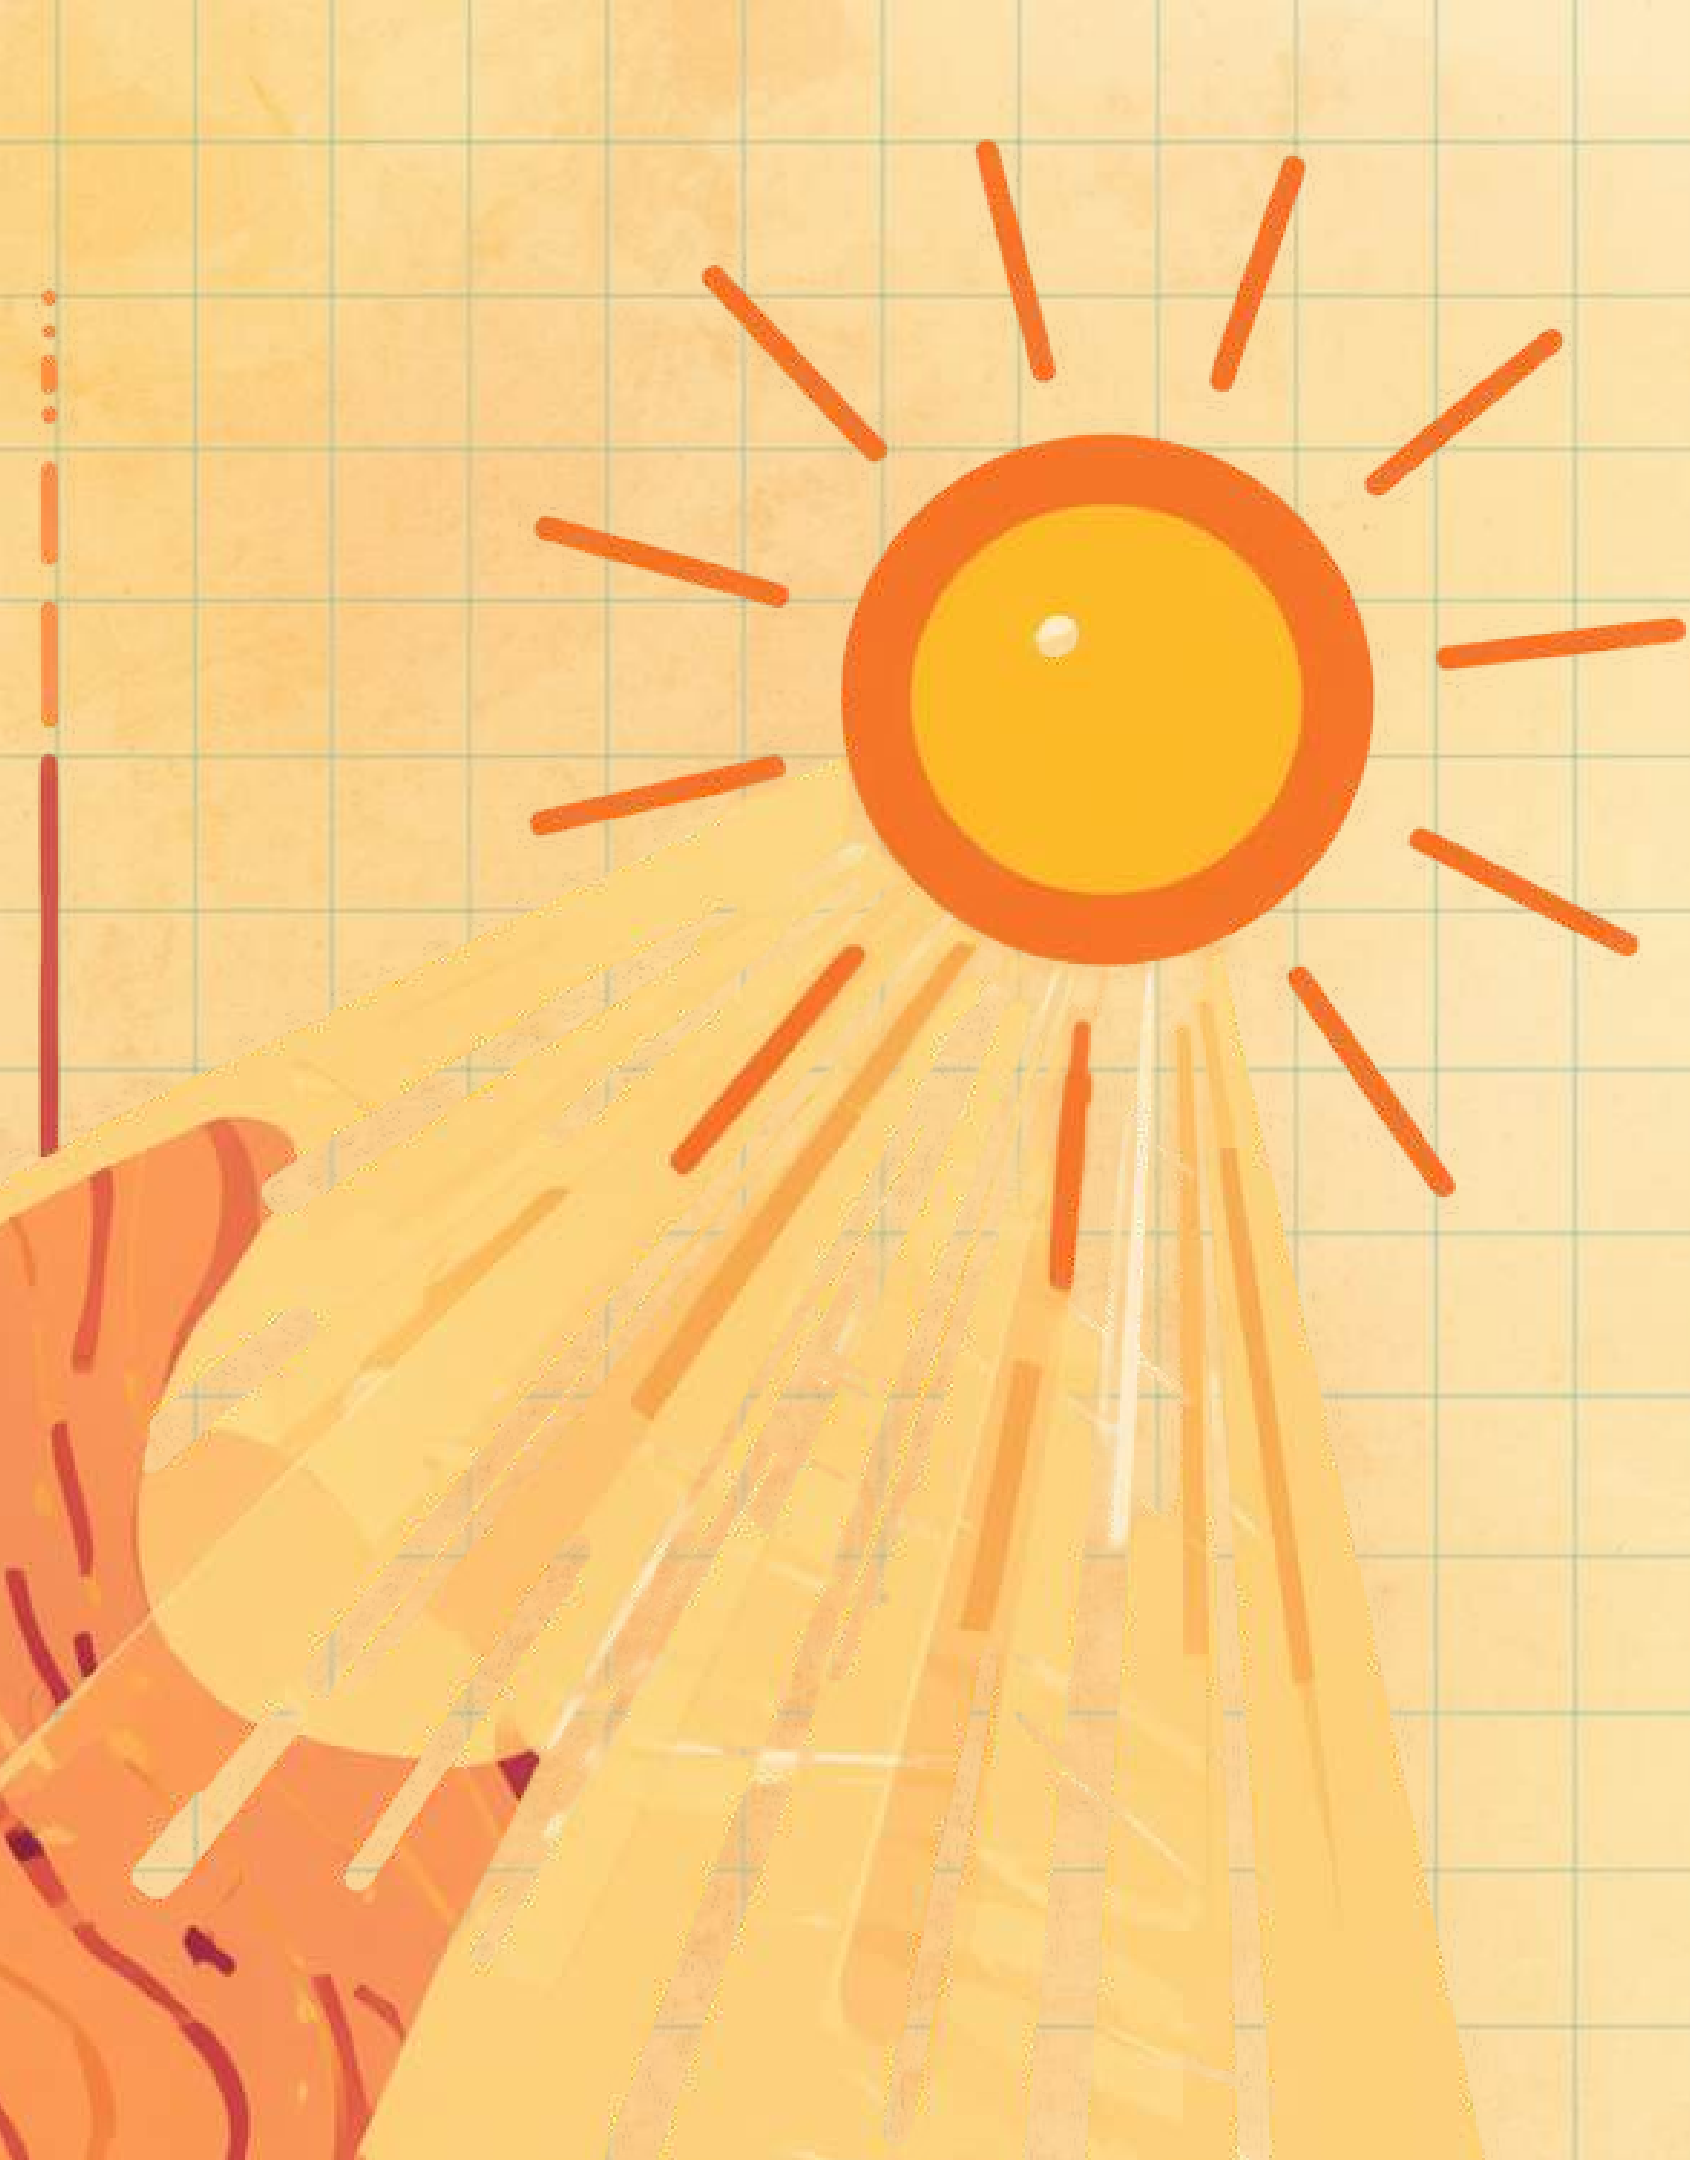

DARK COLORS SOAK UP HEAT!

Dark colors, like black, soak up heat much better than light colors.

That's why wearing a black sweater in hot April sun makes us sweaty! ☀️

In our solar oven, black paper lines the inside — it acts like a Heat Sponge, soaking up all the sun's energy to warm our food!

Try this: Touch a black surface and a white surface left in the sun. Which one feels hotter?

THE MAGIC WINDOW TRAP

The Magic Trapdoor (plastic wrap) lets sunlight in — but keeps heat from escaping!

☀️ Sunlight passes through the plastic wrap into the solar oven.

🔒 The heat gets trapped inside and cannot escape back out.

"It's like a warm blanket for the sun's rays!"

This is why our solar oven gets so warm inside — the plastic wrap does all the magic! ✨

MINI-CHEF RECIPE TIME!

What are we making today?

-  Melt cheese on bread
-  Melt chocolate chips on Marie biscuits

 Remember:

-  Only sunlight — no gas, no matches!
-  Place your solar oven in bright sunlight
-  Wait and watch the magic happen!

The sun does all the cooking for us! 

ECO-HERO CHOICES — WHAT'S SAFE?

01

✓ DO: Use your solar oven on bright, sunny days — like a clear Sunday noon when the sun is shining its strongest! The more sunshine, the more heat inside.

02

✗ DON'T: Put plastic toys or plastic bags inside the solar oven — they will melt! Only use food-safe items like bread, biscuits, or chocolate chips.

03

✗ DON'T: Use your solar oven on cloudy or rainy monsoon days — the sun is hiding behind the clouds and there won't be enough energy to heat your food!

LET'S RECAP: SOLAR OVEN PARTS & JOBS

01

Mirror Friend

Bounces and gathers
sunbeams into the oven to
build up heat inside!

02

Magic Trapdoor

Lets sunlight in but keeps
the heat from escaping —
like a warm blanket!

03

Heat Sponge

Soaks up the sun's heat to
warm our food — dark
black paper does the job!

THE ECO-CHEF PLEDGE

"I promise to use the sun's clean energy and save electricity!"
Say it loud, say it proud — you are now an Eco-Chef Hero!  

01

Appreciate Natural Power
The sun shines every day for free! I will use its energy wisely and be grateful for nature's gifts. 

02

Don't Waste Fuel
I will switch off lights and fans when not needed. Every small step helps save our planet! 

03

Help Keep Earth Happy
I will choose clean energy, reduce waste, and inspire my family to be Eco-Heroes too! 

 Safety First — Eco-Chefs Take Care!

THANK YOU FOR LEARNING WITH US!

NEVER LOOK DIRECTLY AT THE SUN!

ALWAYS EXPERIMENT WITH AN ADULT.

SOLAR OVENS ARE FUN AND SAFE WITH
