Graduation Showcase: Gadgets, Design Thinking & Innovation

You are already a designer!

Spot the Gadget!

A gadget is a tool that solves a problem for people.

Look around and spot 3 gadgets you use every day! Think about your cycle pump, water bottle, or lunchbox. What makes these gadgets useful to you?

Meet Our Indian Innovators: Mansukhbhai & Remya

Real heroes who turned simple ideas into amazing gadgets!

Mansukhbhai Prajapati invented the Mitticool—a clay fridge that keeps food cool without electricity! Remya Jose, as a teenager, created a pedal-powered washing machine to help her family. They used local materials & clever ideas to solve everyday problems!

Functional Design and Grassroots Innovation

Design made to serve a special purpose.

- The Idli Stand: saves space by stacking plates
- The Cycle Pump: helps keep your bike ready to ride

Using what you have to make life easier!

4

The Design Loop: THINK → MAKE → SHARE

Every designer uses this loop!

Learn the three steps to become an innovator:

- 1.THINK about a problem
- 2.MAKE a solution (prototype)
- 3.SHARE your idea with others

5

An illustration of a young boy with dark hair and large eyes, looking thoughtful with his hand on his chin. He is holding a clear plastic water bottle that has a small leak at the top, with blue droplets falling out. The background is a solid purple color. Above the boy's head, there is a glowing yellow lightbulb with orange rays and a small purple cloud with a smiling face.

THINK: Find the Problem

What is bothering you or someone you know?

Example: Ravi noticed his water bottle always leaked in his school bag, making his books wet!

Prompt: What problem will YOU solve?

MAKE: Build Your Prototype

It doesn't have to be perfect—just your first model!

Use simple materials like cardboard, tape, and recycled things to create your gadget. Cut, fold, stick, and shape your ideas into something real. This is called a prototype—your very first model!

SHARE: Tell Your Story

Show your gadget to friends and family. Tell them how it helps!

Sharing your ideas helps you improve them! When others see your gadget, they might have great suggestions. Plus, your invention could inspire someone else to create something amazing too!

Your Turn: Create Your Problem Statement

You are already designers solving real problems!

Write down your problem:

- What is the bother?
- Who does it affect?
- Why will your gadget help?

Example: Ravi's bottle leaks water in his bag, making his books wet. A better lid will keep everything dry!

3-2-1 Exit Review

10

Let's remember what we learned today!

3 gadgets you learned about today

2 steps of the Design Loop you remember

1 feeling word about being an innovator

Take-Home Challenge

Keep exploring, creating, and inventing!

- Challenge: Find one problem at home or school. Use the Design Loop to think, make, and share your gadget!
- Reminder: Bring your idea to the next class or show your family!

Thank You & Keep Innovating!

Thank you for being amazing designers today! Keep exploring and creating!
You are all inventors now!
