

My Grand Year–End Game: Catching the Falling Ladoos!

Course Overview & Learning Goals

- Understand variables as score counters
- Use If-Then logic for game reactions
- Combine motion, events, sensing & variables
- Experience fun coding & playing your game!

Build your own arcade game to catch yummy ladoos!

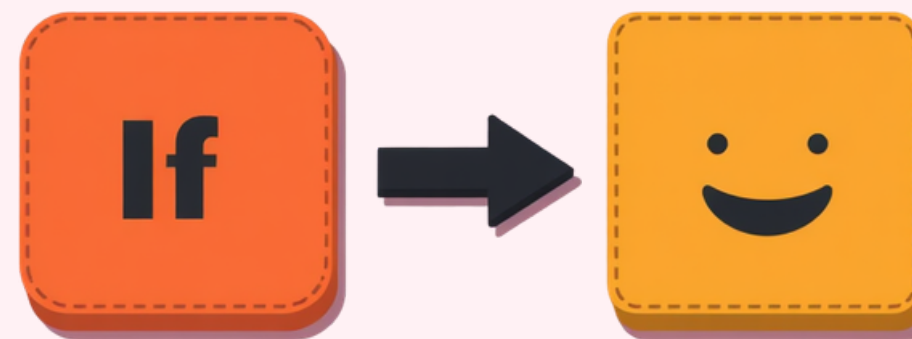

Concept 1: Variables – The Score Box!

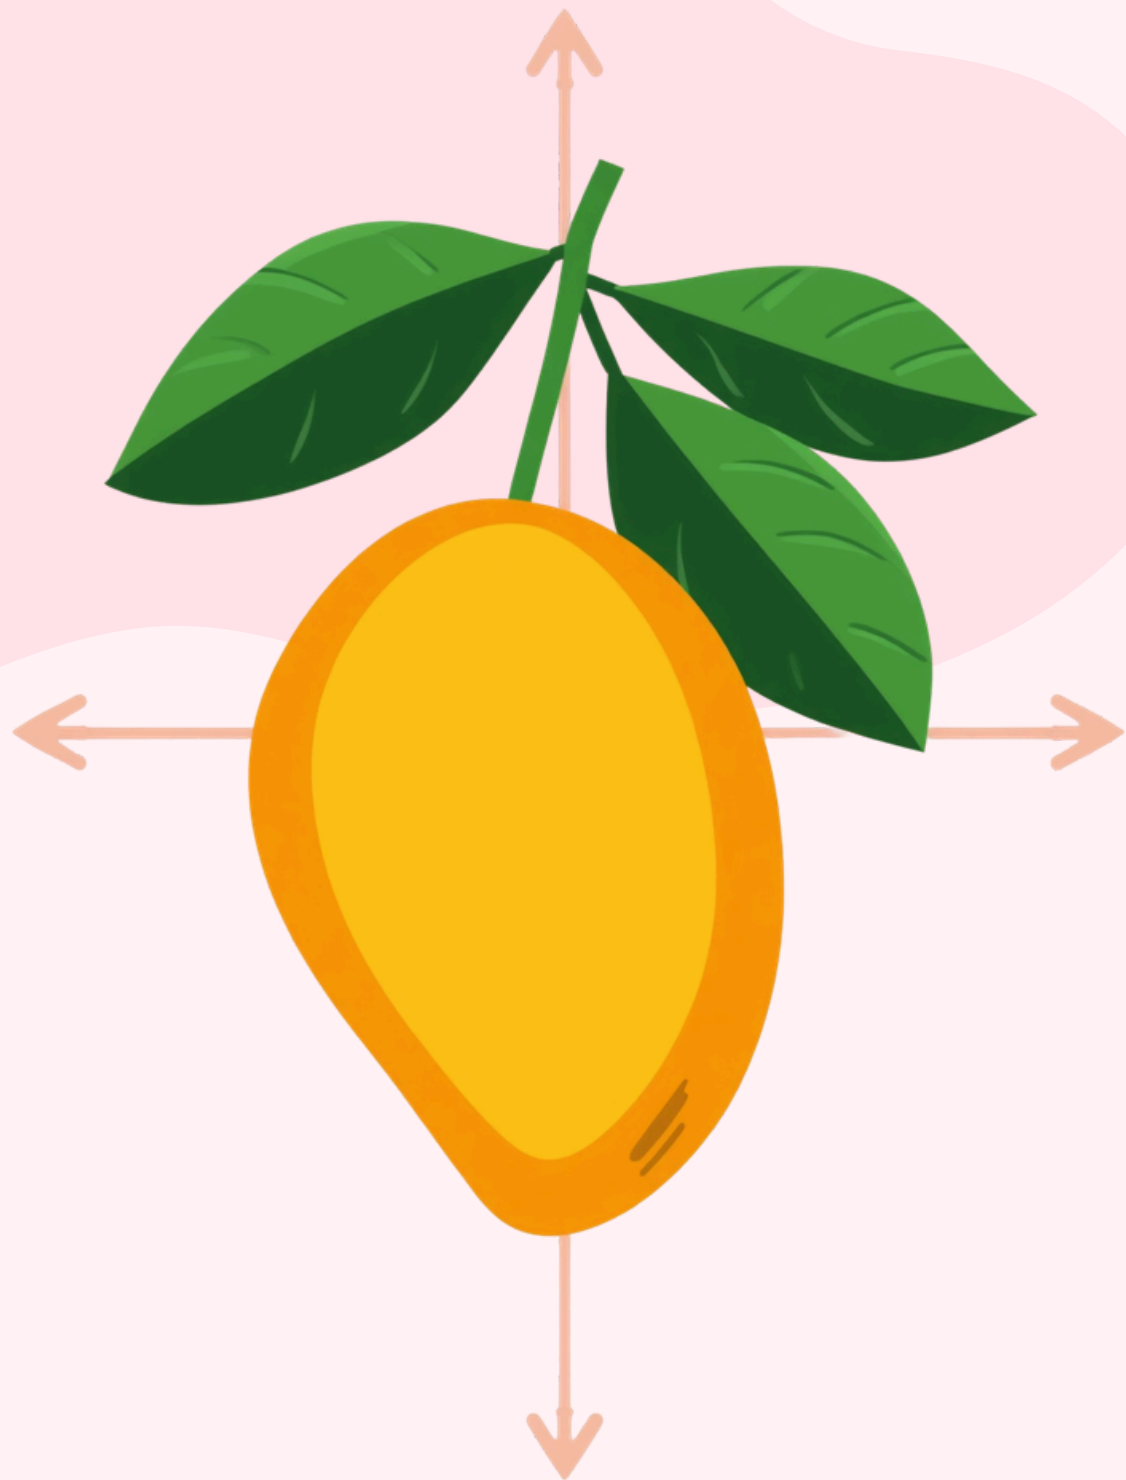

A variable is a box that holds numbers or words.

In IPL cricket, the "Runs" variable changes every time the batsman scores! Our Score box will count how many ladoos you catch!

Step 2 : If-Then Rules!

If something happens, then do this! Example: "If you finish homework by 6 PM, then you can play badminton!" Our game uses If-Then to check if Chotu catches the laddoo!

Concept 3: Fall Motion on X/Y Grid

X is side to side, Y is up and down!
Just like an Alphonso mango falling from a tree branch — it drops straight down as Y gets smaller!
Our ladoos will fall from the sky like ripe mangoes! 🥭

Today YOU will build this arcade game!

Catch the falling ladoos with Chotu!

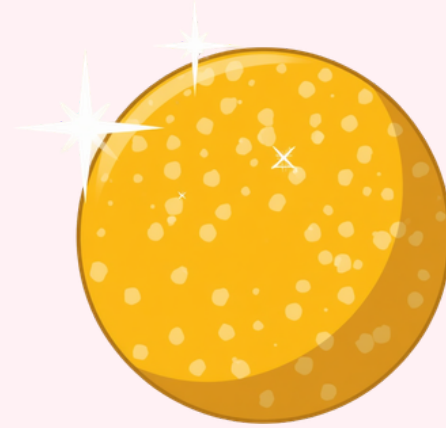

Setting Up Your Game Canvas

Open Scratch, pick a festive backdrop (kitchen, sweet shop, or village fair), then add Chotu the Monkey and a golden laddoo as your two sprites!

Step 8 : Control the Player

Use If-Then inside a Forever loop:

- If Right Arrow pressed → change X by 15
- If Left Arrow pressed → change X by -15

Checkpoint: Test smooth left-right movement!

forever = by -8

change y-by -10

if any y = 180

random x y = 180

Step 2 : Falling Sweet Logic

Forever loop: change y by -8 so laddoo falls down. If Y-position < -170, go to random X and Y = 180 to reset at top. Our laddoo falls, disappears, and comes back to play again!

Step 3 : Catching and Scoring

Create a variable called "Score". If laddoo touches catcher: change Score by 1, play pop sound, go back to top! Reset Score to 0 when green flag is clicked.

I.f Touching Catchers

change Score by 1

◀ Play Pop Sound

🔄 Go to top

Step 11: Customise & Launch Your Game!

Make your game your own! Swap the laddoo for a jalebi or a cricket ball. Speed up the falling to make it harder. Add a Game Over when score reaches 10. Then share your game with family and friends!

"Play your game and share with family!"

Success Criteria & Student Outcomes

80% create a working arcade loop independently

Explain If-Then blocks for catching logic

Understand the dynamic Score variable & share their customized games with family!

Thank You!
