

Share fairly, cut equally –
that's the magic of
fractions!

FRACTION

PIZZA PARTY!

Fraction Pizza Party!

THE BIRTHDAY STORY

Today is Riya's Birthday!

She has ONE big round pizza. Her TWO best friends — Aarav and Meera — want an EQUAL piece each.

How Should Riya Cut the Pizza?

Think about it! Three friends want to share fairly. How can Riya make sure everyone gets the same amount?

Fraction Pizza Party!

WHAT IS A FRACTION?

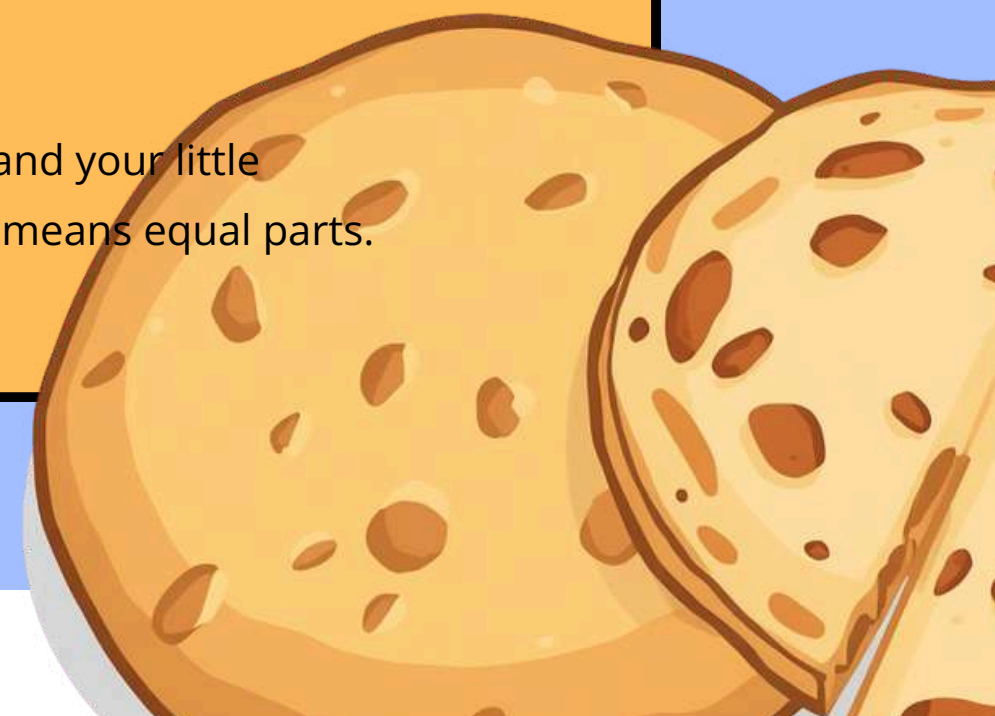

A Fraction is an Equal Part of a Whole Thing!

A fraction is what you get when you share something fairly — every piece is exactly the same size! When we divide something into equal parts, each part is a fraction.

Think of Amma Cutting a Roti for Sharing!

Imagine Amma cutting a round roti into equal pieces for you and your little sister. Each piece is the same — that's a fraction! Fair sharing means equal parts.

Fraction Pizza Party!

EQUAL VS. UNEQUAL PIECES

Equal Pieces = A Real Fraction!

This roti is cut cleanly in half — both pieces are exactly the same size! This is how a good fraction chef cuts!

Unequal Pieces = NOT a Fraction!

This roti is torn unevenly — the pieces are different sizes! Someone will get less. This is NOT a fraction!

Fraction Pizza Party!

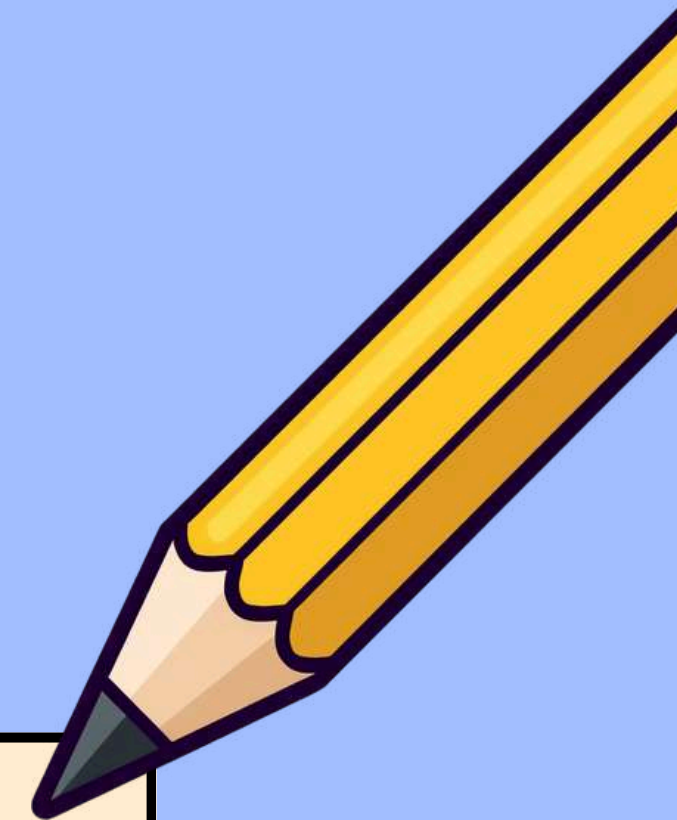

MEET ONE-HALF ($\frac{1}{2}$)

$\frac{1}{2}$

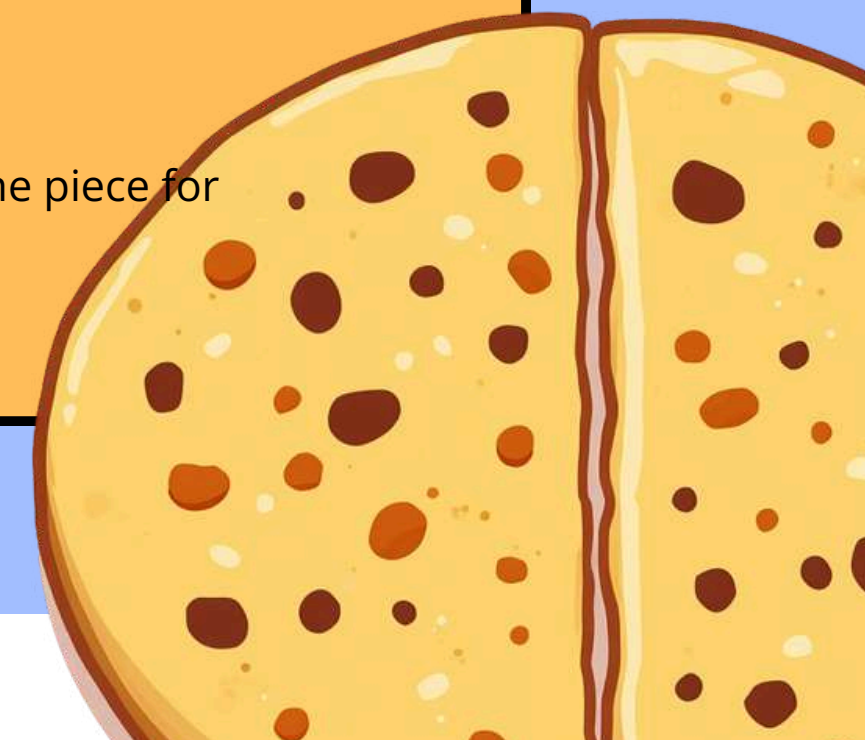

Each piece is called ONE-HALF. We write it $\frac{1}{2}$

When you cut something into 2 EQUAL pieces, each piece is called one-half. Count with me: 1... 2! Two equal pieces!

Just like Amma cuts your paratha in half!

A half means you share fairly between TWO. One piece for you, one piece for your friend — both exactly the same size!

Fraction Pizza Party!

ONE-HALF EXAMPLES

Paratha for Two

Amma cuts one paratha for you and Papa → you get $\frac{1}{2}$

Dadi's Barfi

Dadi breaks one barfi in half to share → each piece is $\frac{1}{2}$

Chapati at Lunch

Chapati torn equally for two children → each gets $\frac{1}{2}$

Lassi to Share

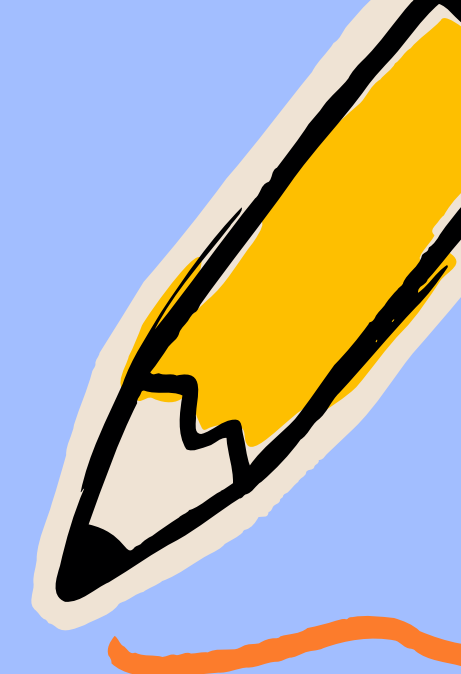

Glass of lassi poured into 2 glasses → each glass has $\frac{1}{2}$

Fraction Pizza Party!

MEET ONE-QUARTER ($\frac{1}{4}$)

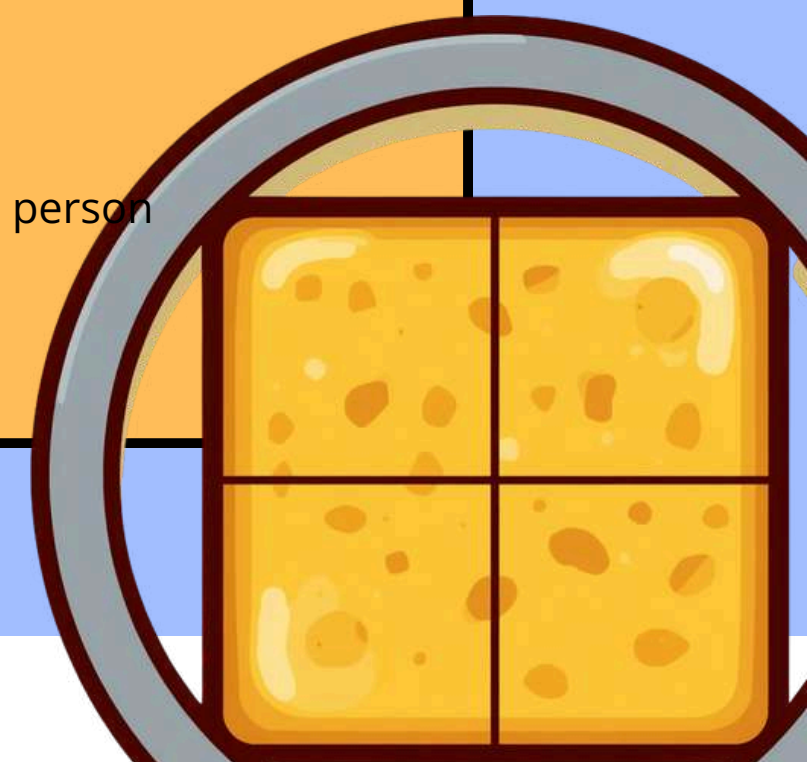

Count: 1... 2... 3... 4! Four Equal Pieces!

Each piece is called ONE-QUARTER. We write it $\frac{1}{4}$. One out of four equal pieces means everyone gets a fair share!

Like Barfi Cut into 4 Pieces at Diwali!

Think of a square barfi cut into 4 equal pieces for your family — each person gets exactly one-quarter! $\frac{1}{4}$

Fraction Pizza Party!

ONE-QUARTER EXAMPLES

Besan Barfi at Diwali

Square barfi cut into 4 equal pieces → each piece is $\frac{1}{4}$

Watermelon for Family

Tarbuji cut into 4 equal pieces → each piece is $\frac{1}{4}$

Sandwich for Four Friends

Square sandwich cut into 4 corners → each piece is $\frac{1}{4}$

Pizza for Four Guests

Round pizza divided into 4 slices → each slice is $\frac{1}{4}$

HALF VS. QUARTER COMPARISON

Which Piece is Bigger? Let's Find Out!

ONE-HALF ($\frac{1}{2}$) means 2 equal pieces. Look how big each piece is when we only cut twice! Half of a pizza is a nice big slice!

Remember: More Pieces = Smaller Pieces!

ONE-QUARTER ($\frac{1}{4}$) means 4 equal pieces. Each piece is smaller because we share with more friends! HALF is bigger than a quarter!

Fraction Pizza Party

LET'S BE FRACTION CHEFS TOGETHER!

Demo 1: Sharing with 2 Friends!

How many friends are sharing? → 2 friends! So how many equal pieces do we need? → 2 equal pieces! That's ONE-HALF each! $\frac{1}{2}$

Demo 2: Sharing with 4 Friends!

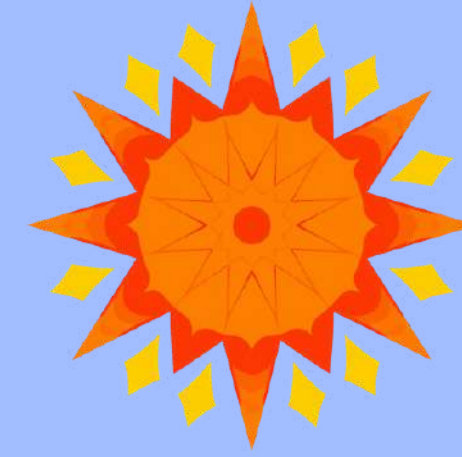

Now FOUR friends want to share this barfi! How many equal pieces do we need? → 4 equal pieces! That's ONE-QUARTER each! $\frac{1}{4}$

Fraction Pizza Party

ACTIVITY TIME - BE A FRACTION CHEF!

Task 1: CUT IT!

Draw lines to cut pizzas and rotis into halves and quarters!

Task 2: SHARE THE FOOD!

Solve fun word problems with Riya, Aarav, and their favourite foods!

Task 3: EQUAL or NOT?

Circle the shapes that show real fractions with equal pieces!

SPOT THE MISTAKE GAME!

Mistake #1: Are These Really Halves?

Look! This circle is labelled $\frac{1}{2}$ but the pieces are NOT equal! One piece is bigger than the other. That's NOT a real fraction!

Mistake #2: Is This a Quarter?

This rectangle is labelled $\frac{1}{4}$ but it only has 3 pieces! We need 4 equal pieces to make quarters. Can you fix it?

Fraction Pizza Party!

FRACTION CHANT & BADGE

Say It Together!

HALF is two! $\frac{1}{2}$! (hold up 2 fingers)
QUARTER is four! $\frac{1}{4}$! (hold up 4 fingers)
Equal pieces every time —
That's what fractions are for!

You Did It!

You are now a CERTIFIED FRACTION CHEF!
You learned to cut and share fairly with halves and quarters!

Fraction Pizza Party!

PARENT CORNER & STRETCH CHALLENGE

Today we learned about halves and quarters using pizzas and rotis! At home, practise by asking your child to help cut fruits or bread into equal pieces. Ask: "Is this a half or a quarter?"

Stretch Challenge!

Find & draw fractions at home!
