

LED TRAFFIC LIGHT ROBOTICS

TODAY'S FUN PLAN

Get ready for an exciting robotics adventure! Here is what we will do together today. Every step is fun, easy, and made just for you!

Meet Chintu!

➔ Hear Chintu the Auto's traffic jam story and learn why signals matter.

Find Our Parts!

➔ Open the box and discover colorful LEDs, the magic board, and wires.

Build It!

➔ Put together your very own working traffic light step by step.

Play & Celebrate!

➔ Play the traffic light game and celebrate becoming a safety hero!

MEET CHINTU IN THE TRAFFIC JAM!

Chintu the Auto was stuck in the busy market! 🚗

Bikes, carts, and people everywhere!

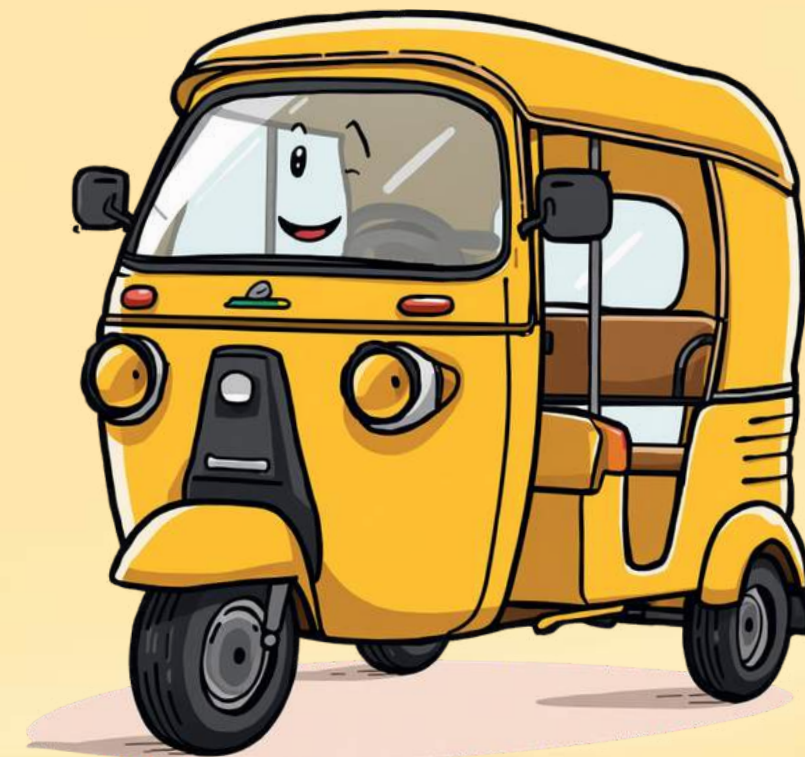

"Stop!" said the Red light – Stop and wait.

"Be Ready!" said the Yellow – Get ready!

"Go!" said the Green – Go safely!

But wait... the traffic light was broken! 😞

Can YOU help fix it? Let's build one today!

TRAFFIC LIGHT COLORS & RULES

Every traffic light has three special colors! Each color gives us an important message. Let's learn what they mean so we can stay safe on the road!

● Red = Stop and wait safely.

● Yellow = Be Ready ! Get ready now.

● Green = Go safely and smile!

LET'S FIND OUR PARTS!

Open your hardware box and spread out all the parts! Each piece has a special job in building your very own traffic light. Can you spot all the colors?

Red, Yellow & Green
LEDs – the colorful
lights!

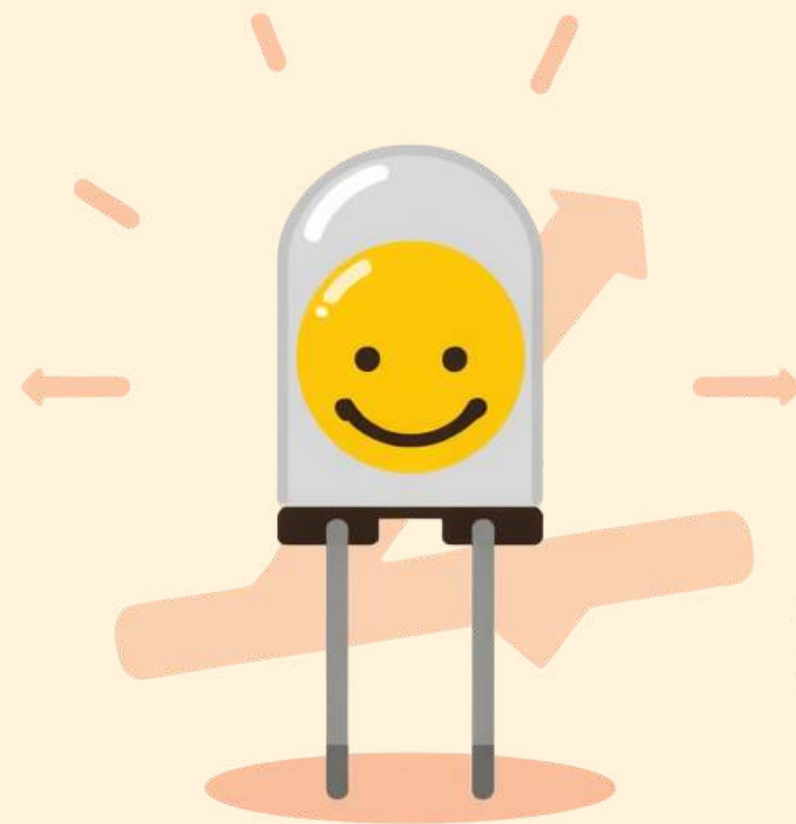

Magic Board
(Breadboard) – the
playground for parts!

Power module and
colorful wires – the
energy givers!

MEET THE LED LEGS!

Every LED has two legs – a long one and a short one! Each leg has a special job. When energy flows the right way through the legs, the LED lights up and glows bright!

Long leg = Happy leg (+)
It lets energy flow IN to the LED!

Short leg = Sad leg (-)
It lets energy flow OUT of the LED!

LEDs glow when energy flows the right way through both legs!

MAGIC BOARD: THE PLAYGROUND!

The Magic Board is like a parking lot for parts! **P**

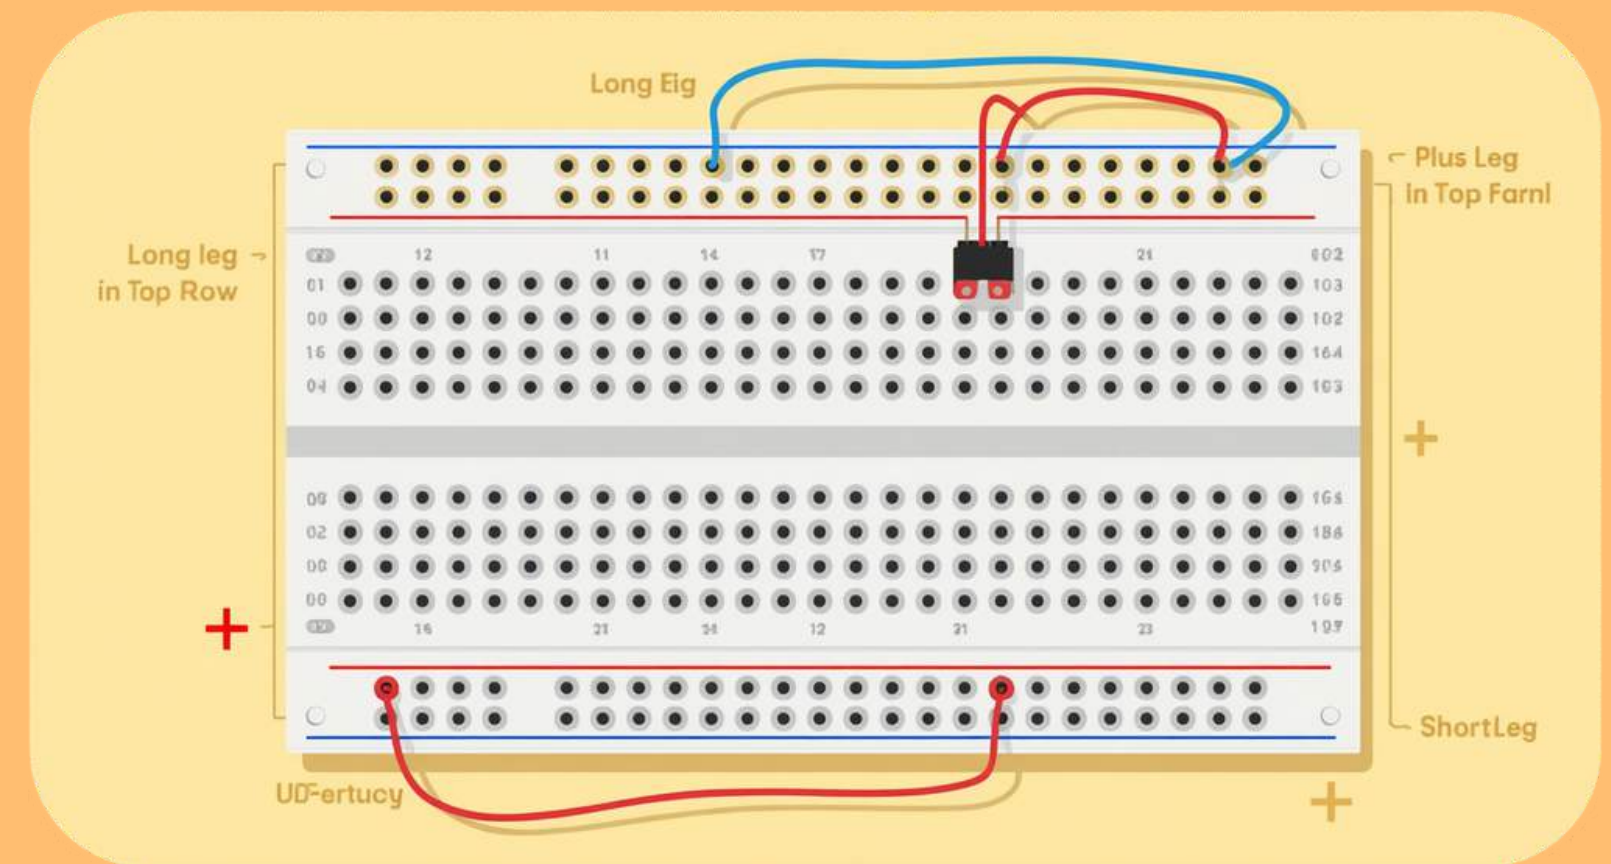

Plus leg (+) goes in the TOP rows.

Minus leg (-) goes in the BOTTOM rows.

Parts click in and out easily – no glue, no mess!

Try it yourself: push your LED legs into the holes.

Can you feel it click? That means it's connected! ⚡

STEP 1 – POWER UP THE MAGIC BOARD!

Mount the power base on your Magic Board (breadboard)!
The power module gives energy to all your LEDs – just like
how electricity lights up a bulb at home.

⚡ Short Tip: "Power gives energy path to LEDs!"

Ask your teacher to help connect the power module safely
before moving to the next step.

STEP 2 – CONNECT RED LED

Put Red LED on the Magic Board!

- Long leg (Plus leg) goes in Row 5
- Short leg (Minus leg) goes in Row 6
- Remember: Long leg = Plus leg!

Tip: Look for the longer leg – it always goes in first!
The red LED will glow when connected correctly.

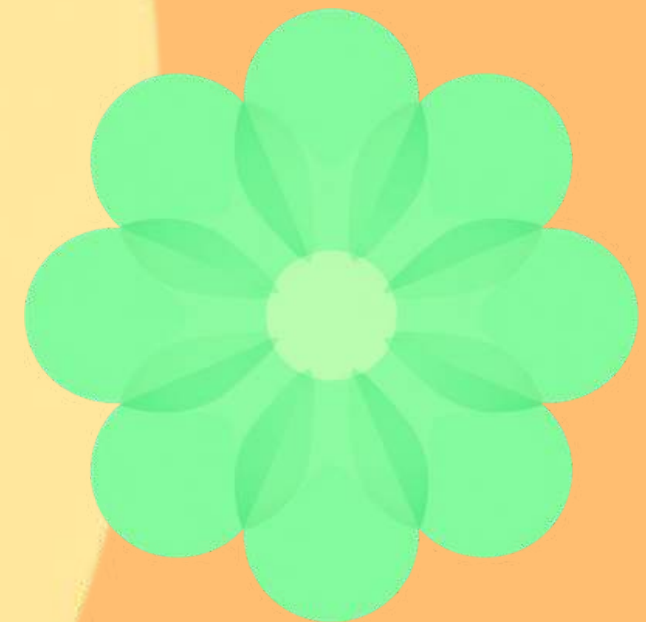

STEP 3 – ADD YELLOW & GREEN LEDs!

Add Yellow and Green LEDs side by side in parallel rows on your magic board!

- Yellow LED: Long leg in row 7, short leg in row 8.
- Green LED: Long leg in row 9, short leg in row 10.

Remember: Long leg = Plus leg!

"Look! They all light up one by one!"

STEP 4 – PLUG IN CONTROL WIRE!

Connect the control wire to the magic board to switch the lights!

🔌 Plug the wire into the last row on your magic board.

⚡ Watch Red, Yellow, and Green LEDs glow one by one!

"Now your traffic light works just like a real one!"

You did it – all 4 steps complete! 🎉

TIME FOR THE TRAFFIC LIGHT GAME!

Play Simon Says with traffic light colors! Listen carefully and follow the signals. Can you be the fastest traffic hero in the class?

● "Stop !" – Everyone STOP and freeze!

● "Be ready !" – Get ready to move!

● "Go !" – Go safely and quickly!

Follow instructions fast – last one out is the traffic jam! 🚦

SHOW OFF YOUR TRAFFIC LIGHT!

Great job, superstar builders! 🎉
You made a REAL working traffic light!

- ★ You learned Red = Stop !
- ★ You learned Yellow = Be Ready!
- ★ You learned Green = Go!

You are Traffic Safety Heroes!

Hold up your traffic light with pride – you built it yourself!

HOME CHALLENGE FOR YOU!

Amazing work today, superstar! 🌟
You built a real traffic light – now it's time to share your new skills with the world!
Try these fun challenges at home and become a true LED hero!

Teach your family!
Show them Red = Stop, Yellow = Be Ready, and Green = Go!

Find glowing things!
Look around your home – find lights, screens, and things that glow just like LEDs!

Draw your signal!
Draw your own traffic signal scene with Red, Yellow, and Green colors!

You are a builder! 🏆
Keep exploring, keep building, and see you next time.

STAY CONNECTED!

**THANK YOU & KEEP
EXPLORING!**
