# CODING / HTML

## MY FAVOURITE FOOD PAGE

## DID YOU KNOW? COMPUTERS USE LISTS TOO!

### Diwali Shopping List (No Order Needed!)

- Diyas
- Rangoli Colours
- Mithai

These can be in ANY order!

### Top 5 Favourite Dishes (Order Matters!)

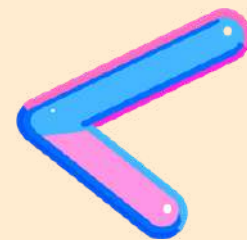

1. Chole Bhature
2. Dosa
3. Gulab Jamun
4. Here, #1 is the BEST!

**Planrs Academy**

# WHAT IS HTML?

## **HTML = HyperText Markup Language**

HTML uses "tags" — special words inside angle brackets like `<`, `>`, and `< / >` that tell computers what to show!

## **Tags are Special Words in Angle Brackets < >**

Think of HTML like Dadi's biryani recipe card!  
Each instruction (tag) tells the kitchen (browser) exactly what to do!

Planrs Academy

# WHAT IS A LIST?

## **Your Tiffin Box**

Chapati, sabzi, curd, pickle

## **South Indian Menu**

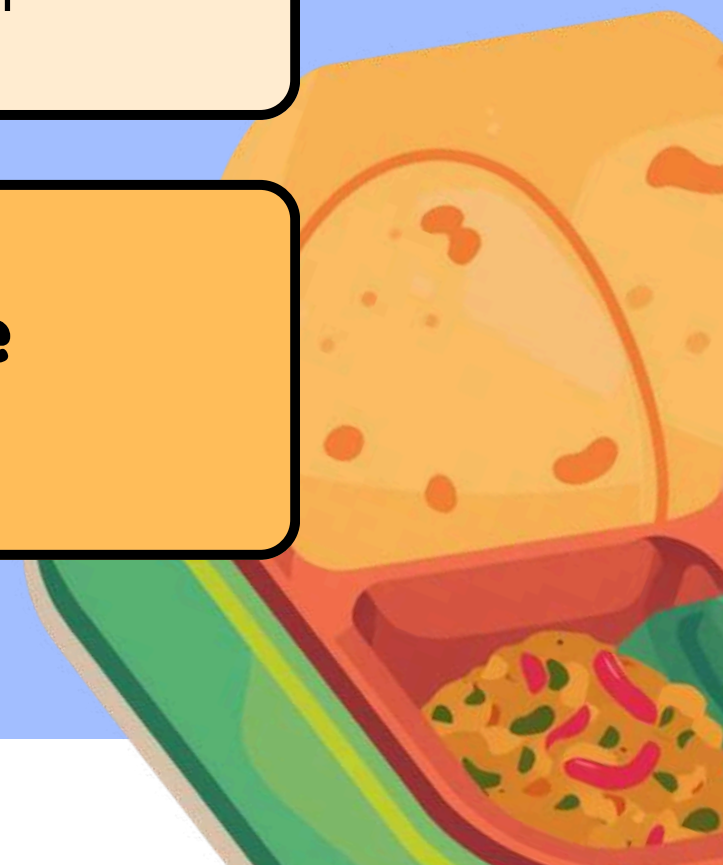

Idli, dosa, vada, sambar

## **Diwali Shopping**

Diyas, rangoli, mithai

## **School Timetable**

Maths, Tamil, EVS, PE

# UNORDERED LIST –

## What is an Unordered List?

A list where ORDER does not matter — items get bullets!  
Use `<ul>` to start, `</ul>` to end, and `<li>` for each yummy item.

## Code Example – Try It!

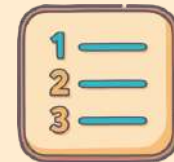

Plans Academy

# ORDERED LIST –

## When ORDER MATTERS – Numbers Appear!

Use to start, to end, and for each item. Numbers are added automatically! Use when ranking matters — like "My Top 3 Foods!"

## My Top 3 Favourite Foods Example

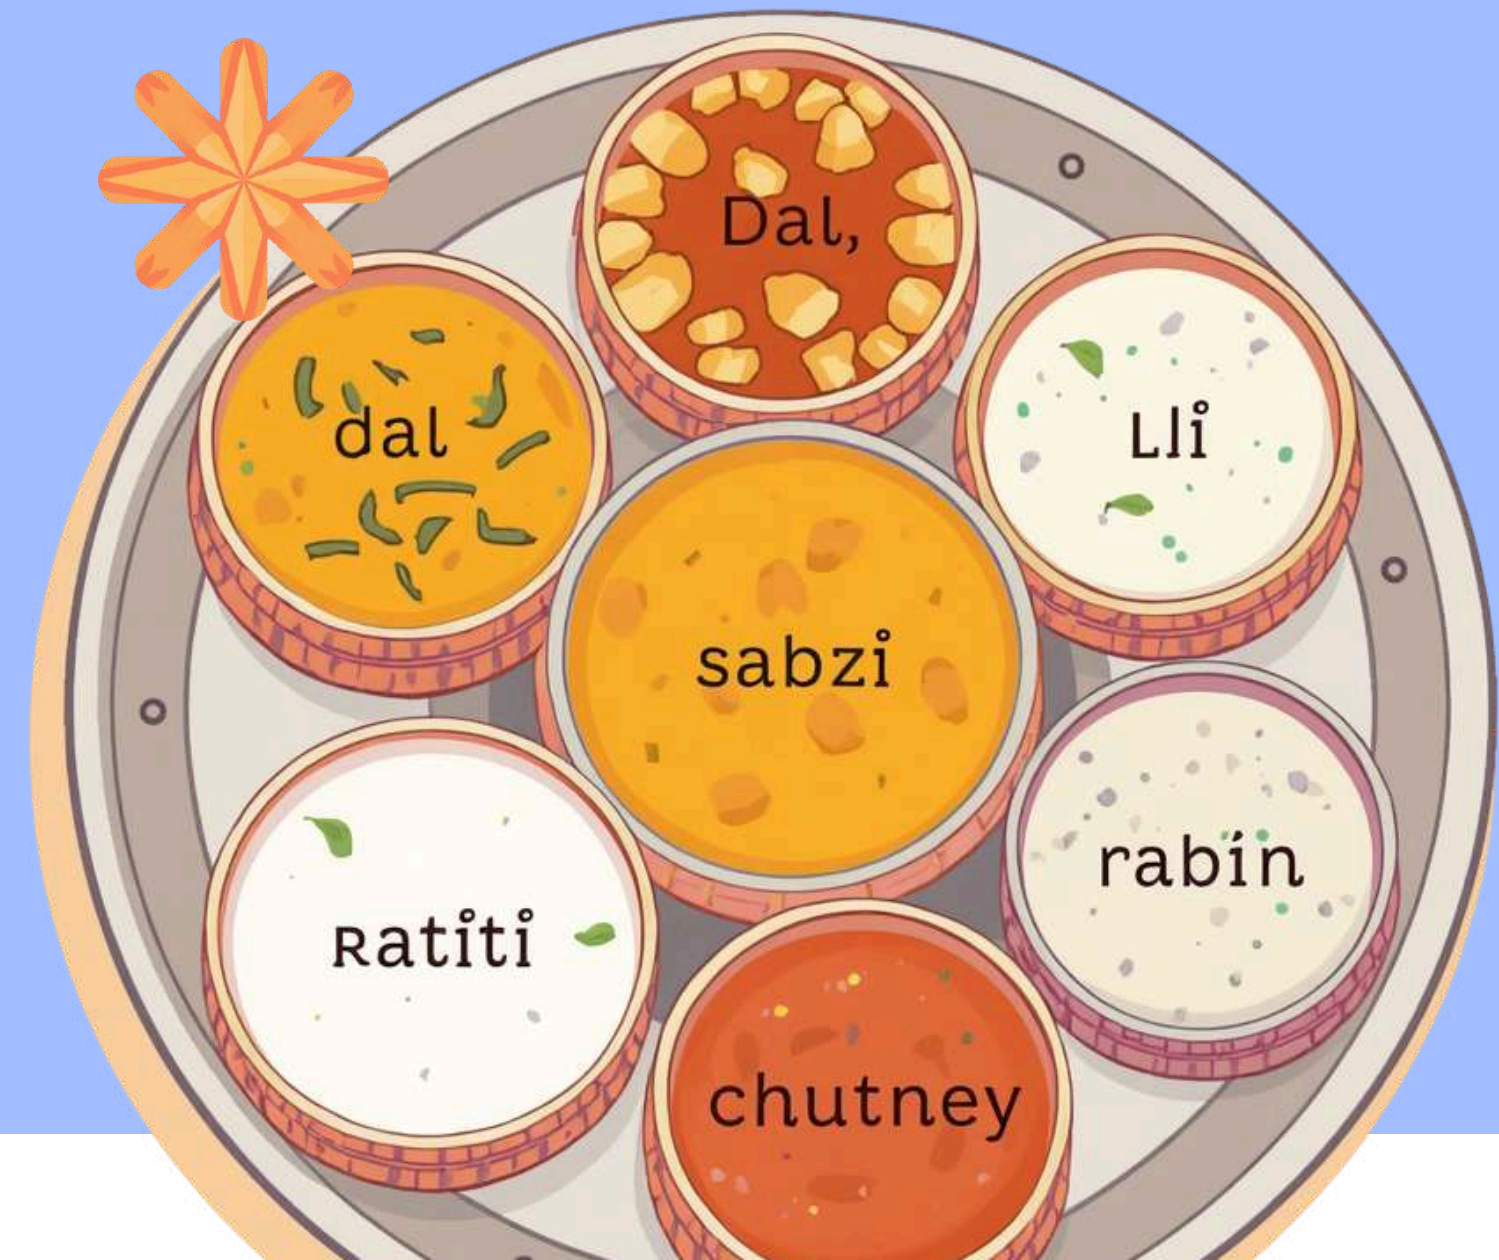

Planrs Academy

# THE TAG – LIST ITEM

**Every item in a list needs ... tags**

**One katori = One tag!**

LI = List Item. Every food on your plate needs its own tag, just like every dish on your thali has its own katori!

**Planrs Academy**

# LET'S BUILD TOGETHER!

**Full Code Example – My Food Page**

**Code along with your teacher!** 

Follow along and type this code to create your very own food webpage!

Planrs Academy

# YOUR TURN! ACTIVITY TIME

**1. Open your code editor**

**1. Create  
myfood.html**

**1. Add your name  
in**

**1. Make with 4  
foods you love**

**1. Make with  
your Top 3  
dishes**

**Planrs Academy**

# SPOT THE BUG!

**Hint: Check the closing tags!**

**Missing after Idli & wrong**

Can you find the mistakes in this code? Look carefully at the tags!

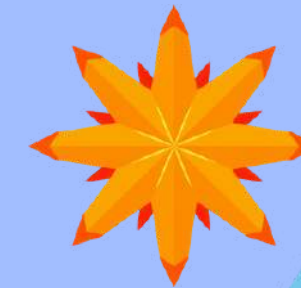

# WHAT YOUR PAGE WILL LOOK LIKE!

**Your Code Becomes a Real Page!**

**Browser Shows Your Food Lists  
Beautifully**

See how your HTML code transforms into a real  
webpage that anyone can read in their browser!

# LEARNING RECAP

**= Unordered List**

Bullets — order doesn't matter!

**= List Item**

Every item needs this tag!

**= Ordered List**

Numbers — order matters!

**Built a Food Page!**

You made a real HTML page!

Planrs Academy

# READY FOR MORE? STRETCH CHALLENGE!

**Add a THIRD list – festival foods!**

**Diwali treats: kaju katli, laddoo,  
namkeen**

Hint: Use — all festival foods are equally yummy! No  
order needed when everything is delicious! 😊

Planrs Academy

# YOU DID IT! 🎉

🏆 **List Master Badge Awarded!**

You just built your first food webpage!  
Amazing work, young coder! More HTML  
adventures coming soon!

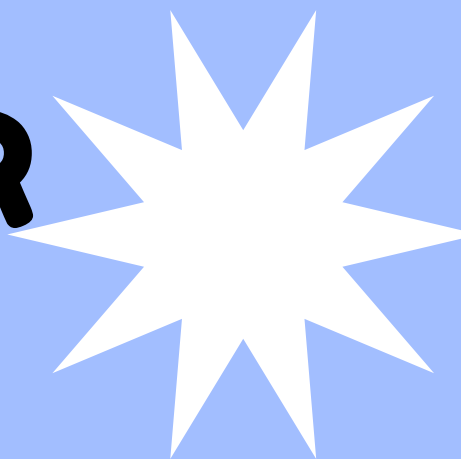

Planrs Academy

# FOR PARENTS – WHAT YOUR CHILD LEARNED TODAY

## HTML List Structure

Learned `<ul>`, `<li>` tags and the difference between ordered and unordered lists

## How to Support

Ask them to show you their food page! No coding knowledge needed — just cheer them on!

## What's Next

More HTML adventures coming soon! Keep encouraging their coding journey
