

GRADUATION SHOWCASE: DEMO DAY LESSON GUIDE

Mastering Storytelling, Public Speaking, Technical Demonstrations & Peer Feedback

1. Lesson Overview & Session Objectives

The Planrs Academy Graduation Showcase (Demo Day) is a 30-minute celebration designed to highlight student innovation across hardware, software, AI, and business planning while honing essential communication skills.

- **Master Storytelling:** Structure pitches using the *Problem* → *Idea* → *Solution* → *Impact* framework.
- **Public Speaking Confidence:** Apply voice modulation, eye contact, expressive gestures, and strong posture.
- **Glow & Grow Feedback:** Practice giving and receiving kind, actionable, and structured peer feedback.

2. Showcase Projects & Featured Student Demonstrations

Students exhibit hands-on projects spanning IoT systems, robotics, machine learning, and entrepreneurship:

Full-Stack IoT Dashboard

Real-time web application displaying live telemetry, remote relay toggles, and dynamic cloud sensor data streams.

Arduino Rover

Autonomous obstacle-avoiding chassis driven by HC-SR04 ultrasonic logic, L298N motor driver, and dual DC motors.

Machine Learning Model

Custom image classification / prediction pipeline trained to make real-time intelligent automated decisions.

Financial Plan Display

Visual budget board detailing unit economics, hardware cost analysis, revenue projections, and startup scaling.

3. The Storytelling Framework

Pillar	Description & Key Focus Questions
1. Problem	What specific challenge or real-world obstacle did you discover in your school, home, or community?
2. Idea	What creative thought or innovative technological concept did you develop to address this challenge?
3. Solution	How did you build, program, test, and integrate your hardware/software setup (e.g., IoT, Rover, ML model)?
4. Impact	What real-world change, financial viability, or positive community benefit does your project create?

4. Public Speaking & Delivery Techniques

- **Speak Clearly & Pace Yourself:** Articulate words slowly so the entire audience follows along smoothly. Use intentional pauses for key takeaways.
- **Eye Contact & Warmth:** Look directly at audience members and smile with confidence to keep listeners engaged.
- **Stand Tall & Expressive Gestures:** Maintain strong posture with shoulders back and use natural hand gestures.
- **Voice Modulation & Heart:** Vary your pitch and volume to express genuine enthusiasm and technical pride.

5. Constructive Peer Feedback: "Glow & Grow" Method

+ GLOW (Celebration): Start by sharing a specific element you liked, admired, or found impressive about their presentation, live project demo, or financial model.

Example: "I loved how clearly you explained how your Arduino rover detects obstacles and how confident your voice was!"

Δ GROW (Suggestion): Offer one kind, helpful, and specific suggestion on how they could improve or expand their project next time.

Example: "Next time, you could link your ML model directly to your IoT dashboard to show real-time predictions live!"

DEMO DAY SHOWCASE PRACTICE WORKSHEET

Test Your Knowledge on Storytelling, Technical Demos, Public Speaking & Financial Planning

Name: _____ Date: _____

Section A: Storytelling & Presentation Structure

QUESTION 1 (Multiple Choice)

When presenting a project during Demo Day, which sequence represents the correct order of the Planrs Academy Storytelling Framework?

1. Idea → Problem → Solution → Impact
2. Problem → Idea → Solution → Impact
3. Solution → Problem → Idea → Impact
4. Impact → Solution → Idea → Problem

QUESTION 2 (Matching Project Components)

Match each of the showcase elements below (**Full-Stack IoT Dashboard**, **Arduino Rover**, **ML Model**, **Financial Plan Display**) to the corresponding stage of the Storytelling Framework where it fits best:

- a. Demonstrating autonomous obstacle-avoidance physical movement: _____
- b. Displaying budget, hardware costs, and revenue projections on a poster: _____
- c. Showing real-time remote telemetry and cloud control buttons: _____
- d. Explaining how automated data predictions classify obstacles: _____

Section B: Showcase Project Showcase & Technical Integration

QUESTION 3 (Showcase Technical Integration Challenge)

Imagine you are presenting an integrated project that features all four student showcase items:

[Full-stack IoT dashboard + Arduino rover + ML model + financial plan on display]

- a. How would you explain to an audience member how the **ML model** and **Arduino rover** work together?
- b. Why is having the **financial plan on display** important when demonstrating a hardware and software prototype to potential investors or judges?

Section C: Public Speaking & Delivery

QUESTION 4 (Scenario Application)

Rohan is presenting his ML model and Arduino rover. He is speaking very fast, looking down at his shoes, and standing completely still without gesturing.

- a. Identify three specific public speaking techniques from the lesson that Rohan should practice to improve his pitch.
- b. Explain how maintaining eye contact and smiling impacts the audience's response during a live hardware demo.

Section D: Peer Feedback & Design Challenge

QUESTION 5 (Glow & Grow Feedback Evaluation)

Ananya gave her classmate the following feedback on their IoT Dashboard demo: *"Your project was okay, but you talked too quiet and I didn't like your web dashboard."*

- Why does Ananya's feedback fail to follow the "Glow & Grow" method?
- Rewrite Ananya's feedback using the proper "Glow" (celebration) and "Grow" (kind suggestion) format.

QUESTION 6 (Super Innovator Design Challenge)

Pick a real-world problem in your school or community and design a solution using at least two showcase technologies (IoT Dashboard, Arduino Rover, ML Model, Financial Plan):

Problem: _____

Technologies Used & Solution: _____

Expected Impact & Budget: _____
