

Percentages - Let's Learn!

Priya's Laddoo Adventure Begins Here!

DADI'S SPECIAL TREAT

Dadi has **prepared 100 laddoos** in a big box from the mithai shop, and Priya is excited to taste them!

Priya's Laddoo Curiosity

EXPLORING LADDOOS AND PERCENTAGES

Priya wonders how many **laddoos she has eaten** out of the 100.
Can you help her figure it out?

100

TOTAL SQUARES

The total number of squares in the grid is **100**. This represents the concept of **percentages**, as percentages are calculated based on a total of 100. Each square can indicate a proportional part of the whole, making it easier to visualize how percentages work in practical scenarios.

50%

AMOUNT EATEN

When Priya has 100 toffees and eats 50, she has consumed **50%** of the total. This means that half of the toffees are gone. Understanding this concept helps us learn how to **compare quantities** in everyday situations, such as sharing snacks or measuring portions.

100%

WHOLE

When we say **100%**, we mean that we have the entire item or quantity. For example, a full chapati and a full glass of lassi both represent **100%**, indicating completeness. Understanding this concept helps us grasp how percentages relate to whole items in our daily lives, especially in food.

50%

HALF

When we say **50%**, it represents half of a whole. For example, if you split a chapati into two equal parts, one part is 50% of the chapati. Similarly, in cricket, if a team scores 150 runs out of 300, they have achieved 50% of their target.

Mini Check-In: Quick Questions

LET'S CHECK OUR UNDERSTANDING OF PERCENTAGES!

- What % is a full water bottle?
- What % is a half chapati?
- Remember, 100% means the whole thing!
- Half means **50%** of something!
- Great job answering these questions!

25%

ONE QUARTER

Understanding percentages can be fun! **25%** represents one quarter of a whole. For example, if you have a **barfi** cut into four equal pieces and take one, you've taken **25%** of it. This concept helps us learn how to share and divide things fairly, like in cricket sessions.

75%

THREE QUARTERS

When we say **75%**, it means that out of a total of **100 parts**, three-quarters are filled. For example, if you have four parathas and have eaten three, then you have consumed **75%** of the food. This concept helps us understand proportions easily using familiar items.

0%

NOTHING LEFT

0% means nothing left. In the context of our examples, this illustrates that when there's nothing remaining, such as an empty dal bowl, it represents zero percent. Understanding this helps students grasp the concept of absence, which is crucial for comprehending percentages effectively.

Shade the Grids!

SHOW PERCENTAGES BY SHADING THE GRIDS

- Grid A: Shade for 50%
- Grid B: Shade for 25%
- Grid C: Shade for 100%
- Grid D: Shade for 0%

Raju's Pocket Money Challenge

UNDERSTANDING SPENDING PERCENTAGES

Raju has **100 rupees** pocket money and spends **25 rupees** on chai and samosa. What percentage did he spend of his total?

100%

FULL

This illustration represents a **full water bottle**, indicating that it is completely filled. In percentage terms, it showcases that the bottle is at **100% capacity**. Understanding this concept helps students grasp the idea of completeness, which is crucial for learning about percentages in various contexts.

50%

FIFTY PERCENT

In this image, the **half-shaded circle** visually represents 50%. This means that out of a whole, half has been accounted for.

Understanding 50% is essential for recognizing equal divisions and is a crucial concept in learning about percentages, especially in day-to-day situations like sharing food.

Wrap-Up and Key Learnings

FUN CHANT

"Hundred means whole — that's **100%**! Half of that — **fifty percent**! One quarter piece — **twenty-five**! Zero means empty — nothing's alive!"

KEY POINTS

- Percent means "out of 100"
- 100% = whole/complete
- 50% = half
- 25% = one quarter
- 0% = nothing/empty

Thank You for Learning!
