

Plants Need Sunlight – Light Experiment

Learning Objectives

What we will learn today:

Plants need sunlight
to grow

No sunlight makes
plants weak

Compare light
vs dark

Plants grow toward
light

Learn science words

Stay healthy and
strong

Think About It!

What happens if a plant does not get sunlight? Look at the two pots and share your ideas with your friends!

Plants Need Sunlight

Plants are living things and need sunlight to grow strong and healthy. Sunlight helps plants make energy, just like food!

Sunlight is Like Food!

Sunlight is food for plants just like
Lentils and Rice is food for us!
Plants use sunlight to stay healthy
and green.

Step 1 – Plant the Seeds!

Plant moong seeds in two pots with soil. Water both pots the same way. Label them Pot A and Pot B!

Experiment Step 2 – Place the Pots

Put Pot A near the window in sunlight.
Put Pot B inside a dark box or cupboard.
Watch what happens!

Experiment Step 3 – Watch and Draw

- Look carefully at both plants every day.
- Draw what you see after one week!

● Observation – Before and After ●

Compare how our plants grew in sunlight
vs. the dark after one week!

- Pot A (Sunlight): Tall, green, and strong!
- Pot B (Dark): Short, yellow, and droopy.

Indian Context Examples

Tulsi plant kept near a sunny window in the courtyard

Money plant leaning toward light near the window

Vocabulary Flashcards

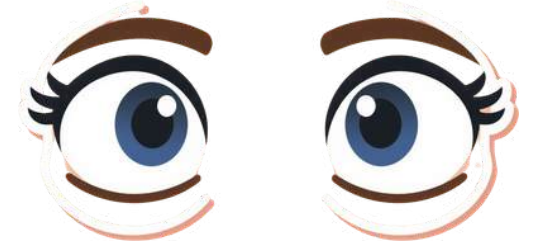

Learn these science words:

sunlight

experiment

observe

healthy

weak

● Summary – What We Learned ●

Let's remember the important things we discovered about plants and sunlight!

Plants need sunlight to grow healthy and strong.
Without sunlight, plants become weak and droopy.
Plants grow towards light to get energy.

★ Quiz – Let's Check! ★

1. What do plants need to grow?
2. What happens to plants without sunlight?
3. Which pot will grow better?

Thank You!

Try this experiment at home with your family!
See how your plants grow with sunlight!
