

TRAINING A SIMPLE CLASSIFIER

GOLU IS CONFUSED!

A truck dumped yellow mangoes and green guavas all together! Golu the Robot keeps putting guavas in the mango box. What a mess!

Golu puts guavas in the mango box by mistake!

Let's become AI Trainers and teach Golu to sort!

WHAT IS A CLASSIFIER?

A Classifier is a smart helper that sorts things!

It looks at clues and puts each item into the right bucket. Just like sorting your toys into boxes!

Smart sorting = looking at clues and choosing the right bucket!

IDENTIFYING THE CLUES!

Features are clues that help Golu sort fruits! He looks at colour and shape to decide which fruit is which.

🥭 Mango: Yellow colour, kidney shape.

🥑 Guava: Green colour, round shape.

🔍 Look for clues — colour and shape are features!

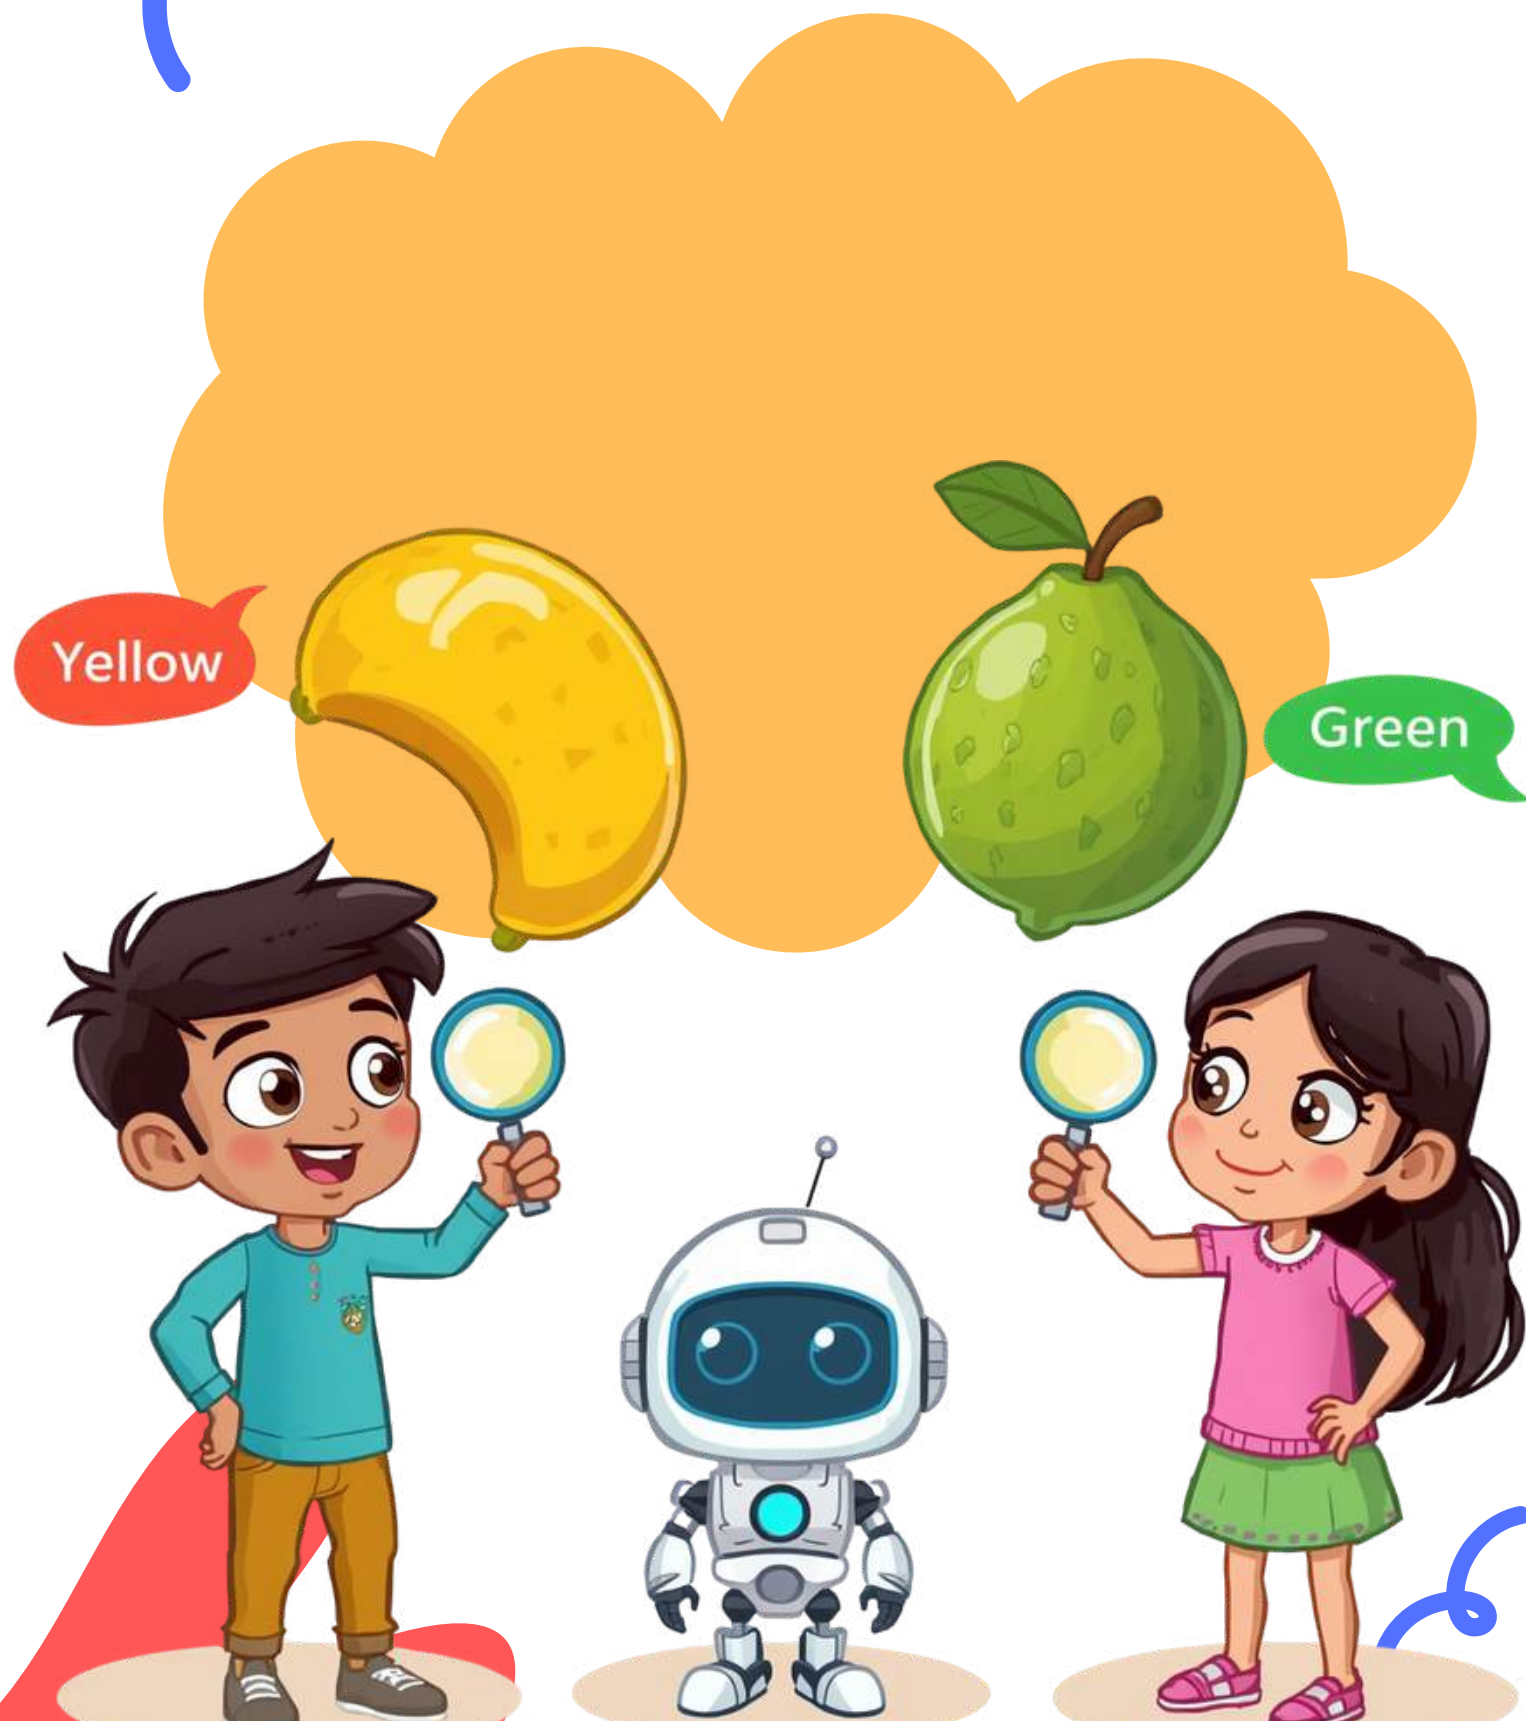

WHY ARE FEATURES IMPORTANT?

Computers look at features to group objects!
Features like colour and shape help Golu the Robot decide which fruit goes where.

● Yellow colour means it's a Mango!

● Green colour means it's a Guava!

● Kidney shape vs. round shape helps too!

FEEDING THE BRAIN!

Golu learns by looking at many examples! Drag yellow mangoes into the Mango Training Bin and green guavas into the Guava Training Bin. More examples = smarter Golu! ⚠️ Only one example can trick Golu!

Drag 5 yellow mangoes into the Mango Training Bin! 🥭

Drag 5 green guavas into the Guava Training Bin! 🥑

⚠️ Warning: Only one example can trick Golu! Give many examples!

More examples help Golu learn better and sort faster! 🤖⭐

HOW TRAINING HELPS!

Training gives Golu smart sorting eyes!
The more examples Golu sees, the
better he gets at sorting mangoes and
guavas correctly.

Before Training: Golu sorts randomly and
makes many mistakes!

After Training: Golu sorts smarter with
fewer mistakes!

NOW, YOU WILL TRAIN GOLU!

Guided Sandbox Practice

Get ready to be an AI Trainer! Sort the items into the correct training bins so Golu can learn to tell them apart.

Items: 6 yellow Laddoos (round) and 6 triangular Samosas.

Class A Bin: Drag Laddoos here!

Class B Bin: Drag Samosas here!

DRAG & TRAIN GOLU!

Step-by-Step Training

Drag 4 Laddoos into Class A bin.
Drag 4 Samosas into Class B bin.
More examples = smarter Golu!

**Watch Golu's brain
start to spin and glow!**

TRAIN MY AI!

Click the 'Train My AI' button and watch Golu's brain light up! Golu looks at all your examples — the yellow mangoes and green guavas — and learns the clues. His brain whirls and glows as he gets smarter!

Now 4 test fruits roll down the conveyor belt. Can Golu sort them correctly? 🤖 ✨

WATCHING AI SORT!

Golu sorts the test items carefully. He checks each fruit and puts it in the right bin. Watch what happens!

✓ Checkmarks on correctly sorted items
— Golu got it right!

? Sometimes Golu asks for more
examples to be sure!

WHAT DID WE LEARN?

Today we became AI Trainers! We taught Golu the Robot how to sort things by looking at clues. Let's remember what we discovered!

 Classifier = a smart sorter that puts things in the right group!

 Features = clues like colour and shape that help sort!

 Training = giving many examples so Golu learns better!

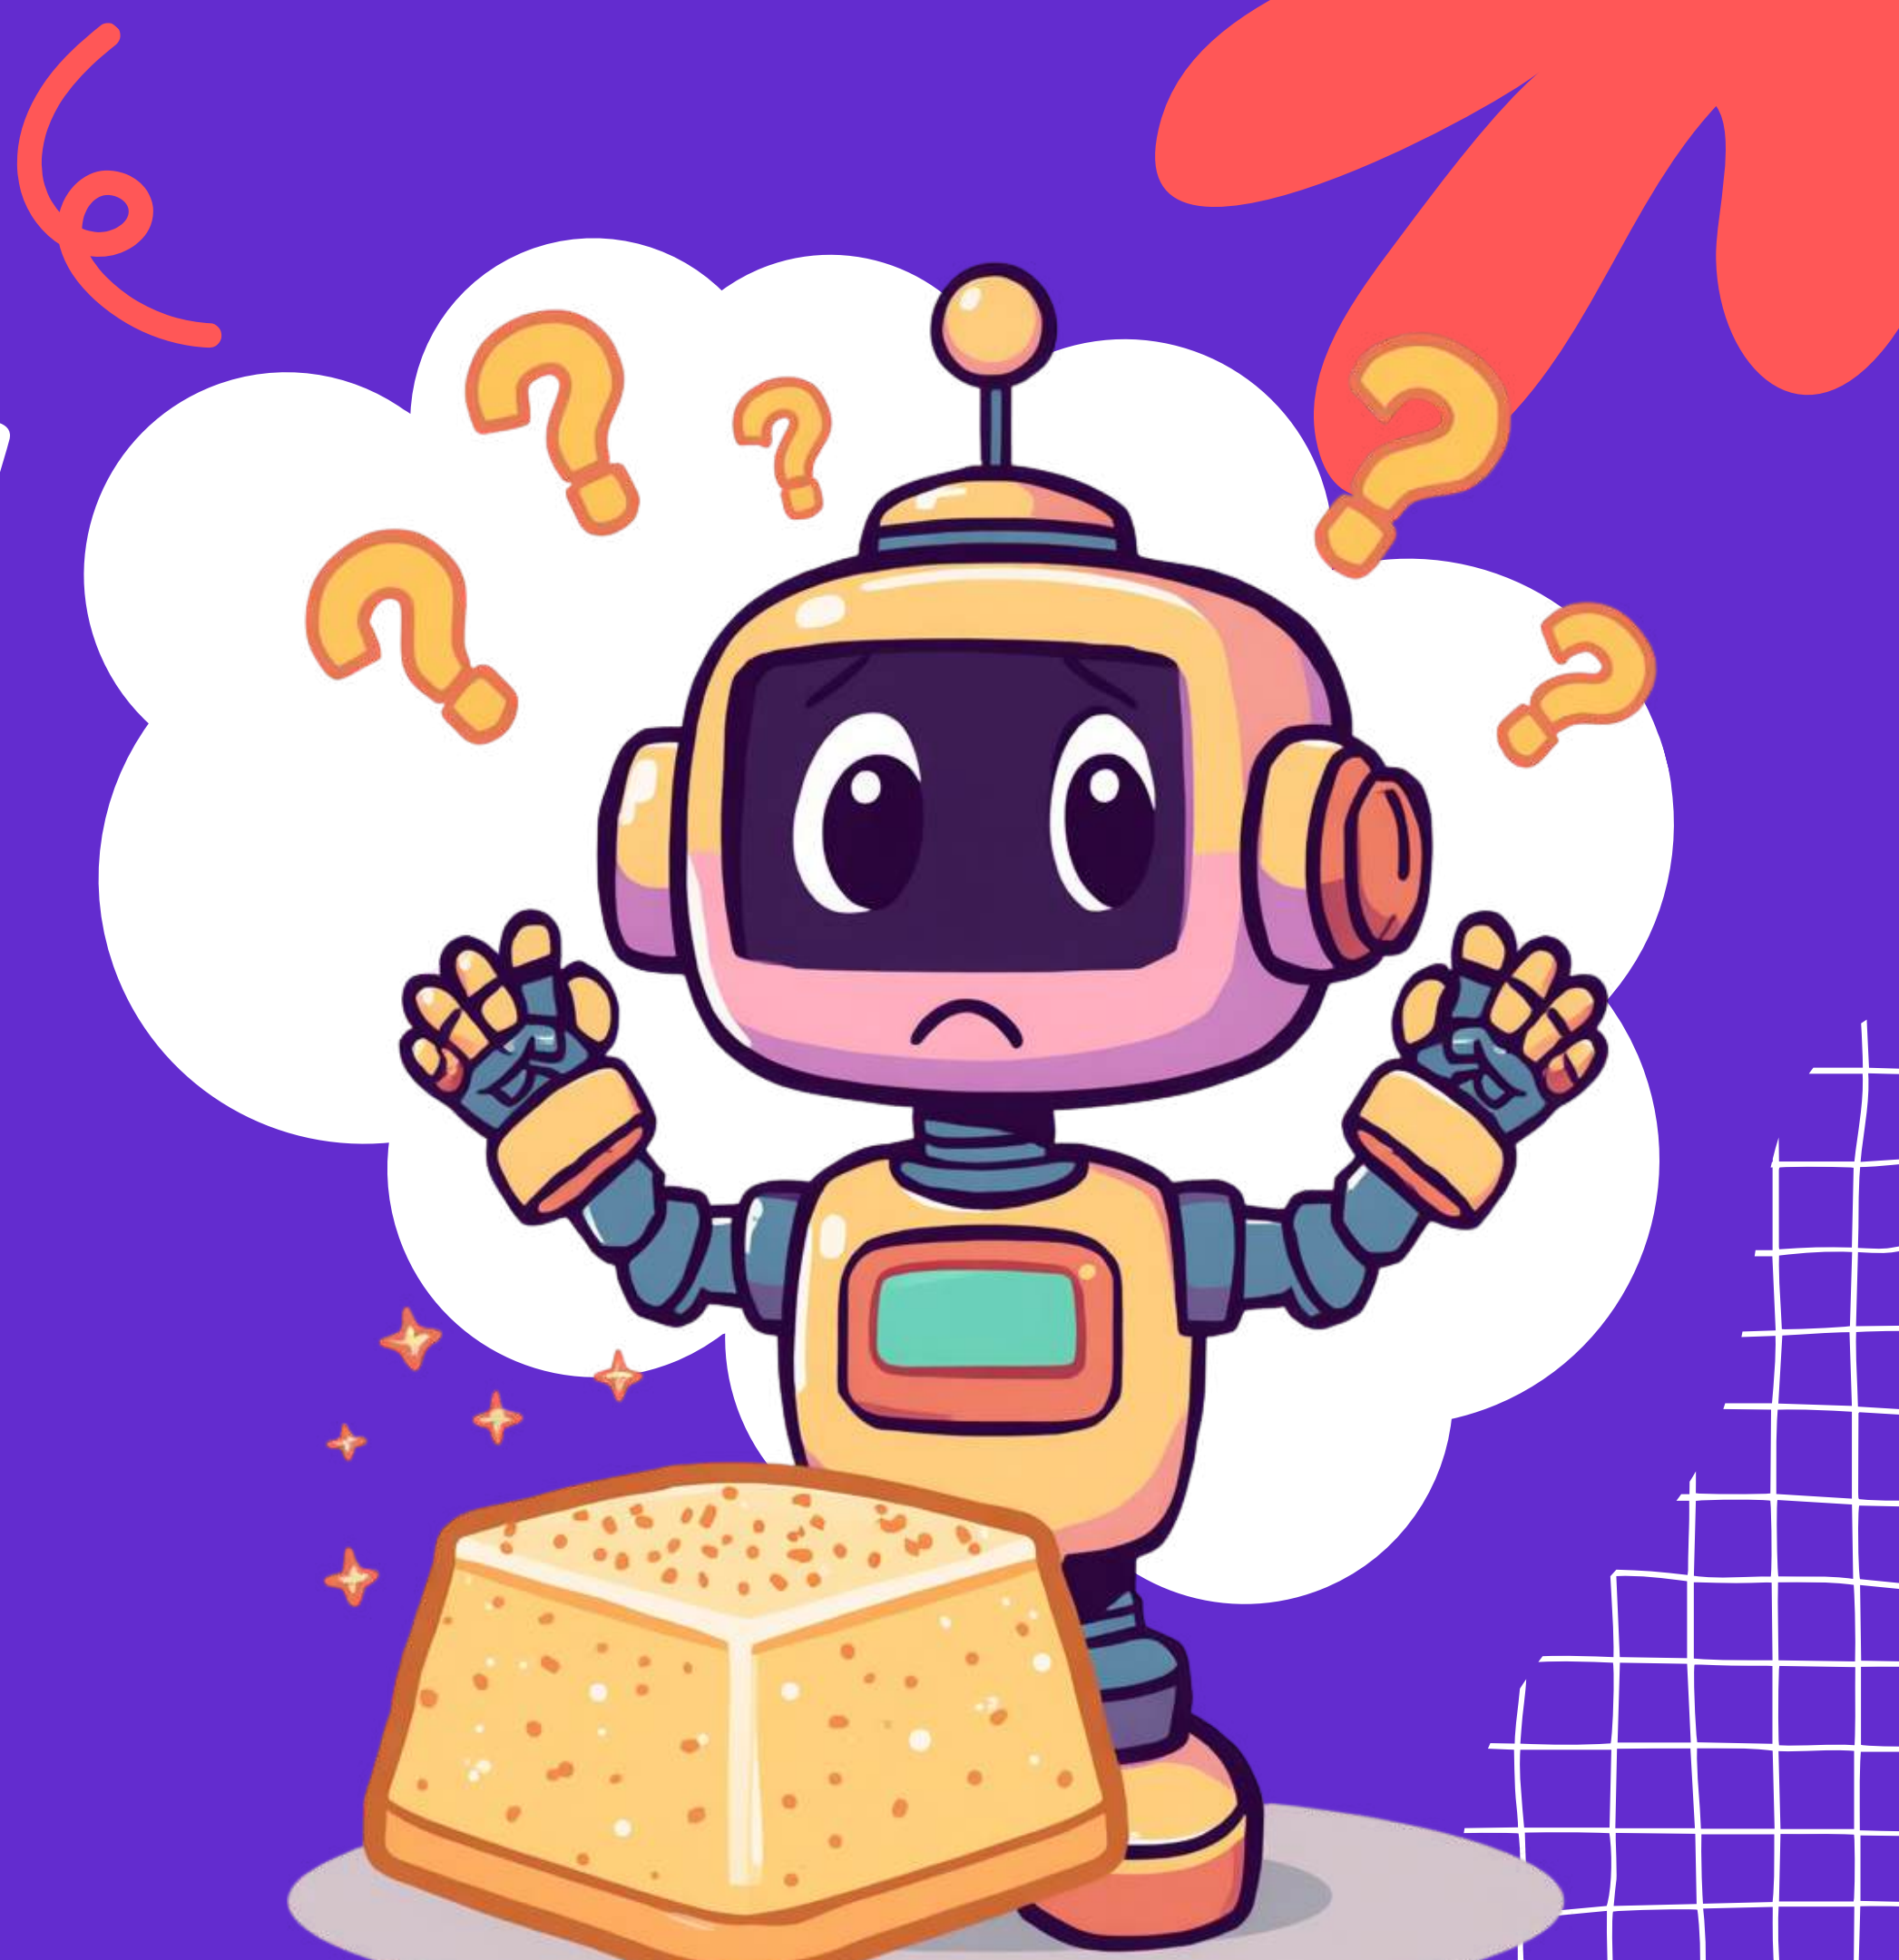

WHAT IF WE THROW SQUARE BARFI?

Think Further! 🤔

Golu only learned about round Laddoos and triangular Samosas. A square Barfi is a new shape he has never seen before! Golu gets confused without training on squares!

Can you teach Golu about Barfi? What clues would you give him?

YOU ARE A JUNIOR AI TRAINER!

You did it! You taught Golu how to sort fruits by looking at clues like colour and shape. You gave examples, trained the AI, and watched it learn. That makes YOU a real AI Trainer!

**GREAT JOB
TEACHING GOLU!**
