

1. THE AI "MIND-READER" MYTH

A common misconception is that AI is a "mind-reader" that automatically knows what you want. In reality, **AI is a master assistant** that relies entirely on clear instructions from *you*! Think of AI as a talented actor, and you as the movie director. Without detailed instructions, the actor won't know how to perform the scene.

The Tea Recipe Analogy

Imagine asking a chef to "Make tea." You might receive plain, black tea—not what you wanted! But if you give an **engineered prompt**: "Make Masala tea with extra ginger, less sugar, and serve it in a clay cup," you get the exact flavor you envisioned. Details transform average results into perfect ones!

2. THE 3-PILLAR PROMPTING FRAMEWORK

Every effective prompt relies on three fundamental structural components:

1. Context

Who you are, where you are, or the situation background.

e.g., "I am a Grade 6 student in Chennai..."

2. Task

The specific action or deliverable you want from the AI.

e.g., "...write a poem about the Monsoon..."

3. Format

The structural presentation or style layout requested.

e.g., "...in 4 stanzas using bullet points."

3. PERSONA POWER & ITERATIVE REFINEMENT

Persona Power: Telling AI to adopt a role completely shifts its tone and perspective.

- "Act like a Cricket Commentator and describe my morning school assembly."
- "Act like a Grandparent and tell me a story about old Bangalore."
- "Act like a Science Teacher and explain photosynthesis to a 5-year-old."

Iterative Refinement: Prompting is a step-by-step process. You start basic and refine your prompt iteratively:

Iteration	Prompt Text	Quality Evaluation
Version 1	"Tell me about tigers"	Vague & basic. AI guesses what information you need.
Version 2	"Write a paragraph about tigers' habitat for my school project"	Better! Contains Task + Context.
Version 3	"As a wildlife scientist, write a detailed paragraph about the habitat and diet of tigers in India for my Grade 6 science project."	PRO Level! Uses Persona + Context + Task + Format.

STUDENT WORKSHEET & EXERCISES

Hands-On Prompt Engineering Practice

PART 1: CONCEPT VERIFICATION & FILL IN THE BLANKS

Complete the sentences using key concepts from the lesson:

- 1. AI is not a mind-reader; it is a master assistant that acts like an actor, while you are the _____ .
- 2. The three pillars of a perfect prompt are Context, Task, and _____ .
- 3. Assigning a _____ (e.g., "Act like a Science Teacher") changes the tone and voice of the AI output.
- 4. Gradually improving a prompt across multiple versions is called _____ refinement.
- 5. In the tea recipe analogy, adding details like ginger, sugar level, and cup type creates an _____ prompt.

PART 2: DECONSTRUCT THE PROMPT (IDENTIFY PILLARS)

Read the following Pro Prompt and identify its core components:

"As a history curator, write 5 bullet points summarizing the life of Rani Lakshmibai for a 5th-grade presentation."

a) Persona:

b) Context:

c) Task:

d) Format:

PART 3: PROMPT MAKEOVER CHALLENGE

Transform the weak, vague prompts below into **Pro Prompts** by applying the 3-Pillar Framework and Persona Power.

Scenario A: Indian Culture Day Stall

Weak Prompt: "Plan a stall for Kerala."

Write your Pro Prompt (Include Context, Task, Format, and Persona):

Scenario B: Science Explanation

Weak Prompt: "Explain solar energy."

Write your Pro Prompt (Include Persona, Context, Task, and Format):

PART 4: ITERATIVE REFINEMENT CHAIN

Practice writing 3 iterative versions for the weak prompt: "Help me with Diwali."

Version 1 (Basic Task): Help me with Diwali.

Version 2 (Task + Context):

Version 3 (PRO: Persona + Context + Task + Format):

FINAL ASSESSMENT QUESTIONS

Comprehensive Practice Questions for Students (No Answers Included)

INDEPENDENT STUDENT PRACTICE QUESTIONS

Answer the following questions thoroughly based on the concepts learned in this lesson.

Question 1: Conceptual Reasoning

Why is AI compared to an "actor" and the prompt-writer to a "director"? What happens when a director gives vague directions to an actor?

Question 2: Framework Application

Explain why including **Context** (e.g., your grade level, location, or audience) changes the response generated by an AI compared to asking a prompt with only a Task.

Question 3: Persona Analysis

How does setting a **Persona** change the tone and language of an AI output? Give two distinct examples of how explaining "Monsoon Season" would differ between a *Cricket Commentator persona* and a *Geology Teacher persona*.

Question 4: Iterative Refinement Process

Describe the steps of **Iterative Refinement**. Why should a user test and modify a prompt multiple times rather than settling for the first AI answer?

Question 5: Real-World Prompt Design

Design a complete Pro Prompt requesting AI to generate a 3-day itinerary for an educational trip to historical landmarks in Delhi. Ensure your prompt explicitly incorporates all 4 elements: Persona, Context, Task, and Format.
