

Class 2

Algorithms in Daily Life

Playful Steps for Curious Minds!

What is an Algorithm?

An algorithm is a set of steps to solve a problem or do a task!

Think of it like a recipe for cooking your favourite dish, or the steps you follow to brush your teeth every morning. When you do things step by step in order, that is an algorithm! Algorithms help us do tasks the right way, every time.

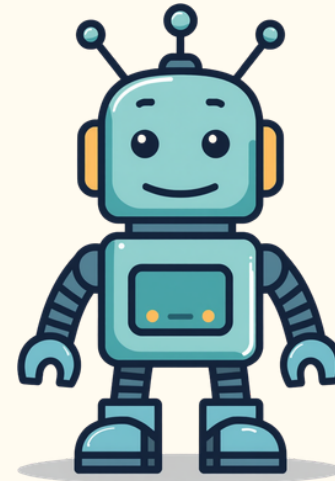

Why Are Algorithms Important?

Algorithms help us every day in many ways!

Easier & Faster

Algorithms make tasks easier and faster — like getting ready for school quickly!

Helps Computers & Robots

Computers and robots follow algorithms to know exactly what to do next.

Solves Problems

Algorithms help us figure out solutions to problems we face every day!

Did you know? When you follow your morning routine, you are already using an algorithm!

Morning Routine Algorithm

Our Morning Routine is an Algorithm!

Every morning, we follow the same steps in order!

- ☀ Wake up
- 🪥 Brush your teeth
- 👕 Get dressed
- 🍳 Eat breakfast

Following these steps every day is just like an algorithm — a set of steps done in order to complete a task!

Brushing Teeth!

Step-by-Step Guide

Follow these simple steps every morning and night for a bright, healthy smile!

- 💧 Wet your toothbrush
- 🪥 Put toothpaste on
- 😊 Brush all your teeth
- ✨ Rinse and smile!

Our brushing routine is an algorithm — same steps every time!

Making a Sandwich!

Algorithm in Cooking 🥪

Follow these yummy steps to make a delicious sandwich — that's an algorithm!

- 🍞 Take two slices of bread
- 🧈 Add butter or jam
- 🥪 Put the slices together
- 😊 Eat your yummy sandwich!

Every time you follow the same steps to make food, you are using an algorithm!

Algorithms in Games

How Games Know What Happens Next!

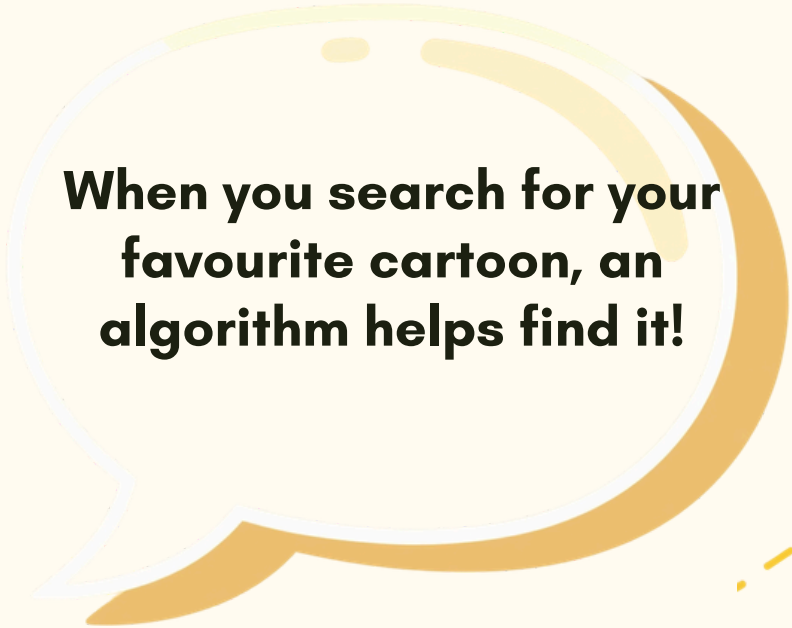

Games use algorithms to decide what happens next. Every move you make, every level you complete — the game follows steps to figure out what to do! Whether it is a board game or a computer game, algorithms are working behind the scenes to make it fun.

Computer Algorithms Help Us

How Computers Use Algorithms Every Day

Algorithms help computers do amazing things! They help find answers to your questions, show you fun videos, and play your favourite music. Every time you use a tablet or computer, algorithms are working behind the scenes!

When you search for your favourite cartoon, an algorithm helps find it!

Algorithms help computers find answers quickly

They help show videos and play your favourite music

Algorithms make apps and games work just right!

Fun Fact!

Did you know? Algorithms are not just for computers — they are all around us! Every time you follow steps to do something, you are using an algorithm. From morning routines to cooking, games to nature — algorithms are everywhere!

"Algorithms are like invisible helpers that make life easier!"

Algorithms Help Us!

Algorithms help us stay organised and happy!

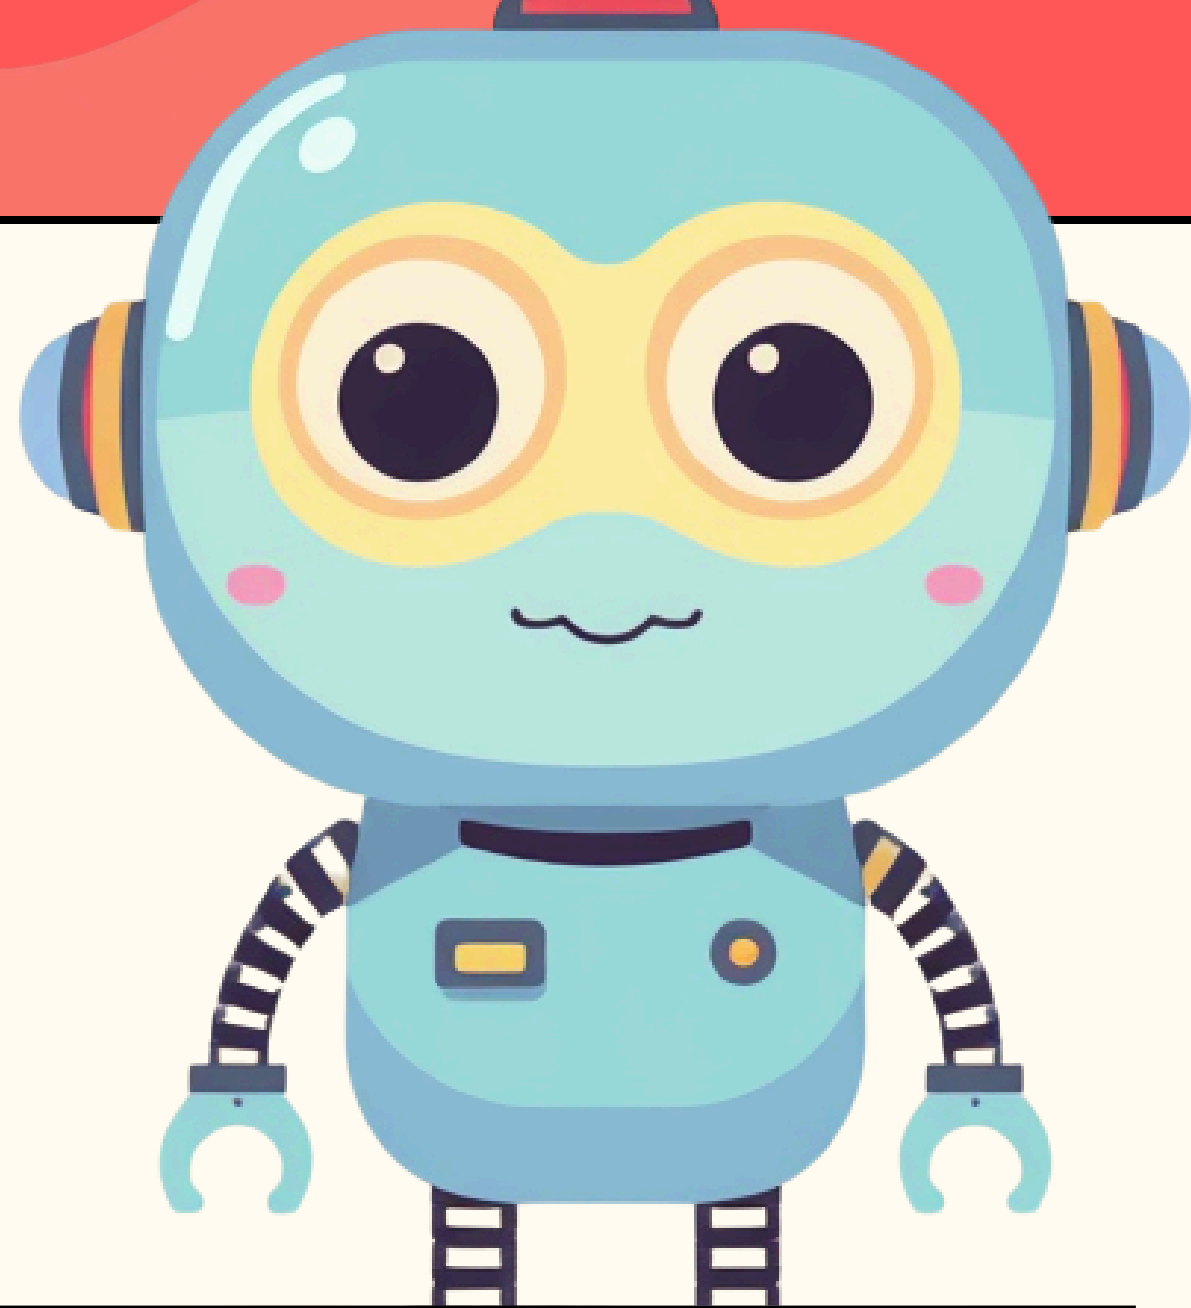

Without: Messy room 🙄

With: Tidy room 😊

Without: Confused child 🤔

With: Happy & organised! ✨

How Robots Use Algorithms

Robots Follow Steps to Get Things Done!

Robots are smart machines, but they need instructions! Every robot follows a set of steps — an algorithm — to do its job. Whether it is cleaning the floor, sorting toys, or moving objects, robots follow their algorithm carefully, step by step, every single time!

Let's Make an Algorithm!

Pack Your School Bag!

Can you think of the steps to pack your school bag? Let's make an algorithm together!

Put your books inside
Add your pencil box
Place your lunch box
Don't forget your water bottle!

Algorithm in Nature

How Nature Follows Steps, Just Like Algorithms!

Did you know nature has algorithms too? Bees collect nectar by following the same steps every time: fly to a flower, collect nectar, return to the hive, and repeat! Birds migrate by following a path. Even seeds grow by following nature's own special steps. Nature is full of algorithms!

Quiz Time!

Let's See What You Remember!

Think carefully and answer these fun questions. Raise your hand when you know the answer!

What is an Algorithm?

Can you explain what an algorithm is in your own words? Give an example!

Name One Algorithm!

Can you name one algorithm you use every day? Think about your morning routine!

Why Do Robots Need Algorithms?

Why do you think robots need algorithms to work? What would happen without them?

Algorithms in Daily Life

Thank You!

Any questions? Keep exploring
algorithms every day!
