

Volcano Eruption!

An Adventure with Jwalamukhi - Our Fire Mountain
PLANRS Academy Master Course

The Mystery Mountain Story

Meet the Mountain That
Breathes Fire!

Imagine a mountain that can breathe fire and
smoke! This special mountain is called a
Jwalamukhi – our Fire Mountain friend!

What is a Volcano?

(Jwalamukhi) - Our Fire Mountain!

Key Word 02

Volcano
A mountain with a special opening at the top!

Key Word 01

Magma
Hot melted rock hiding deep inside the Earth!

The Parts of a Volcano

Vent

The opening where hot lava escapes – like a chimney!

Crater

The bowl-shaped top of the volcano – like a giant cup!

Magma & Lava

Magma is melted rock inside;
Lava is when it comes out!

Let's explore what's inside our
Fire Mountain!

Every volcano has special parts that work
together. Let's learn about the three main parts
that make volcanoes so amazing!

Magma

Hot melted rock that stays underground inside Earth

Lava

Hot melted rock that comes outside the volcano

Magma vs. Lava

What's the Difference? Let's Find Out!

Think of it like juice! Magma is like juice inside a bottle – it stays underground. Lava is like juice poured out – it flows outside the volcano!

The Three States of Volcanoes

The Sleeping Giant Story

Volcanoes can be Active, Sleeping (Dormant), or Extinct. Active means awake and erupting, Dormant means sleeping, and Extinct means gone forever!

Active Volcano

Awake and erupting or can erupt very soon - like a mountain that's wide awake!

Dormant Volcano

The Sleeping Giant - resting now but may wake up one day to erupt again!

Extinct Volcano

Gone forever - no longer erupts, like a sleeping giant who will never wake up again.

Volcano States Explained

Understanding the Three Types of Volcanoes

Volcanoes can be in different states, just like how we can be awake, sleeping, or have moved away forever. Let's learn about each type!

Deccan Traps

Ancient lava flows created big hills in Maharashtra

Barren Island

South Asia's only active volcano today!

Barren Island

Located in Andaman & Nicobar Islands

India's Volcanoes

Discovering Fire Mountains in Our Country!

India has amazing volcanic history! Let's explore where volcanoes are found in our country and learn about the fire mountains that shaped our land.

Visit to Barren Island

South Asia's Only Active Volcano!

Located in the Andaman & Nicobar Islands, this amazing Fire Mountain "Volcano" is waiting for us! Let's take a virtual trip to see this incredible volcano!

The Deccan Traps

Ancient Lava That Shaped India's Land

Did You Know?

Millions of years ago, lava flowed here to make big hills called the Deccan Traps.

Fun Fact

These hills show how volcanoes shaped India's land long ago!

Volcano Basics

A volcano is a mountain with melted rock (magma) inside!

Magma vs Lava

Magma is inside the Earth,
Lava flows outside!

Volcano Parts & States

Vent, Crater, Magma/Lava •
Active, Dormant, Extinct •
Barren Island is India's active
volcano!

Recap: What We Learned

Let's Remember Our Volcano Adventure!

You are now a Volcano Expert! Here are the amazing things we
discovered about Jwalamukhi – our Fire Mountains!

Congratulations, Volcano Explorers!

You earned your Explorer Badge! Keep exploring nature!
