Why Do We Need Money?

Money helps us buy things easily! When we go to a shop, we give money and get what we want. It makes trading simple and fair for everyone.

Imagine you want a toy, but you have only apples to trade! Would the shopkeeper want your apples? Maybe not! That's why money is so helpful.

The Barter System

Long ago, people exchanged things directly. This was called barter.

Example: If you had milk but wanted clothes, you traded with someone who had clothes!

No coins, no notes — just trading what you had for what you needed.

Problems with Barter

The barter system had many problems! Imagine you have bananas but want a pencil. What if the pencil seller doesn't want bananas? You would have to keep searching for someone who wants exactly what you have. This made trading very difficult and confusing for everyone!

No One Wants It!

The Invention of Money

Long ago, people got tired of the problems with barter. So they invented money! People started using special objects like shells, beads, and metal coins to buy and sell things. This made trading much easier for everyone.

India has a rich history of money! Ancient Indians used punch-marked coins made of silver. These were some of the earliest coins in the world. Money helped people trade without worrying about finding someone who wanted exactly what they had.

Money comes in different forms! We use coins that jingle in our pockets, paper notes that we can fold, and now even digital money on phones. Let's learn about each type!

Types of Money

Coins

Mobile Payments

Digital Money

Paper Notes

Money in Indian History

India has a rich history of coins! Long ago, people used punch-marked coins made of silver. Later, Mughal emperors created beautiful gold and silver coins with their names on them. Each coin tells a story of our past!

Coins and Notes Today

Today, we use coins and notes made by the government. These are called currency. In India, we have coins of 1, 2, 5, and 10 rupees. We also have paper notes of 10, 20, 50, 100, 200, 500, and 2000 rupees!

The Reserve Bank of India (RBI) is the special bank that makes all our money. RBI decides how many coins and notes to print. Every note has the RBI Governor's signature on it. Look at a note and find it!

Banks and Saving Money

Banks are special places that keep our money safe! When you save money in a bank, it stays protected. Banks help families save for important things like school, festivals, and emergencies. You can put money in and take it out when you need it. Saving money helps us buy bigger things later!

Digital Payments Begin

Now, we can send money using our phones! Instead of carrying coins and notes, we can pay for things just by tapping on a smartphone. This is called digital payment.

Imagine buying your favorite snack at a shop. Your parents can just scan a code with their phone and pay instantly! No need to search for exact change or worry about losing money.

What is UPI?

Let's Learn!

UPI means Unified Payments Interface. It is a special system that helps us send and receive money easily using our phones. No need to go to a bank or carry cash!

With UPI, you can pay for things, send money to friends and family, or even receive pocket money — all with just a few taps on a smartphone. It's like magic money transfer!

How Does UPI Work?

UPI makes sending money super easy!
Just follow these simple steps and you
can pay anyone in seconds. No need to
carry coins or notes – your phone does all
the work!

Done! So Easy!

Benefits of UPI

Why UPI is Great!

UPI makes paying for things super easy! You can send money to anyone, anytime, without carrying coins or notes. Let's see why UPI is so helpful for everyone.

Fast and instant payments.

No need to carry cash.

Safe and secure.

Use anytime, anywhere.

**Barter System –
Trading goods directly**

**Coins Invented – Metal
money begins**

**Paper Money & Banks
– Notes and savings**

**Digital Payments & UPI
– Money on phones!**

Timeline: From Barter to UPI

The Journey of Money

Money has changed a lot over time! From trading goods directly to sending money with just a tap on our phones. Let's see how this amazing journey happened!

Each step made buying and selling easier for everyone. Today, with UPI, we can send money to anyone in seconds – no coins or notes needed!

Let's Think! About Money

If you could buy anything with just one thing, what would you use? Think about it! What makes something valuable enough to trade for anything you want?

Would you choose gold? Chocolate? Your favorite toy? Share your ideas with your classmates and discuss why you picked that item!

Thank You!
