

# SLIME LAB!

The Magic of Polymers

Let's Make Your First Slime!

# Welcome to Slime Lab!

Get Ready to Explore! Today we're going to make something super cool - squishy, stretchy slime!

We'll learn how mixing special ingredients creates something magical and gooey. Science can be messy and fun at the same time!

## What You'll Need

Before we make our magical slime, let's gather all our supplies! Ask a grown-up to help you get everything ready.

White Glue (PVA)

Borax Solution / Activator

Food Coloring (Your favorite color!)

Sparkly Glitter for extra fun!

**ALWAYS ASK FOR ADULT HELP WITH CHEMICALS!**

# How to Make Slime

Follow these simple steps to create your very own magical slime!

1 Pour your white glue into a clean bowl.

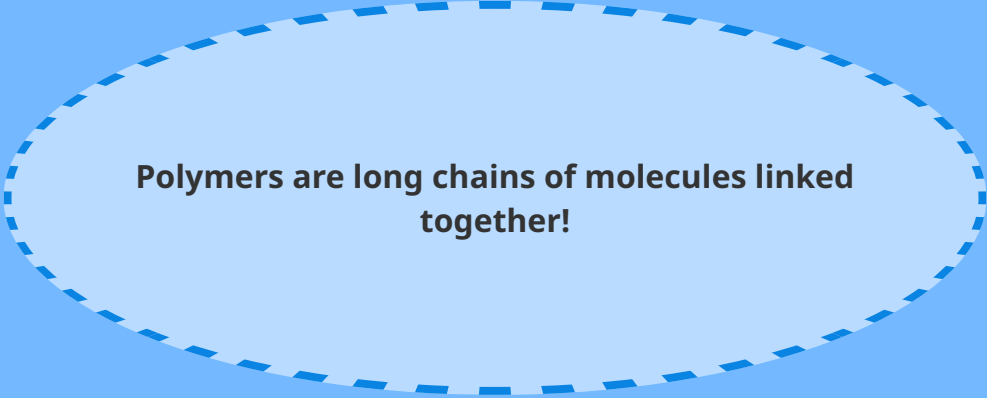

2 Add your favorite colors and mix well until it looks perfect.

3 Slowly add the magic activator and stir vigorously!

4 Once it clumps, start kneading it with your hands until it's smooth.

# The Science of Slime!

What are polymers? They are long chains of tiny molecules all linked together - like holding hands with your friends in a long line!

**Polymers are long chains of molecules linked together!**

Is slime solid or liquid? It's both—how cool! Scientists call this a non-Newtonian fluid.

***Liquid + Activator → Polymer Chain***

States of matter include **solid, liquid, and gas**. Slime is special because it flows AND bounces!

## Let's Experiment!

Time to play scientist! Discover slime secrets with these fun tests.

**Stretch It:** Pull your slime slowly, then pull it fast! Notice how it behaves differently.

**Poke It:** Poke it fast, then poke it slow. Does it feel hard or soft?

**Roll It:** Can you roll your slime into a perfect ball? Try bouncing it on the table!

## **You're a Slime Scientist!**

Congratulations! You learned about polymers and states of matter. You discovered how liquids and solids can mix to make something stretchy and fun.

Science is everywhere around you!
