Grade 1 Session 1

Volcano Eruption!

An Adventure with Jwalamukhi — Our Fire Mountain

The Mystery Mountain Story

Meet the Mountain That Breathes Fire!

Imagine a mountain that can breathe fire and smoke! This special mountain is called a **Jwalamukhi** — our Fire Mountain friend!

What is a Volcano?

A mountain with a special opening at the top! Deep inside the Earth, it is very, very hot. So hot that even rocks melt!

Key Word: Magma

Hot melted rock hiding deep inside the Earth!

The Parts of a Volcano

Every volcano has special parts that work together. Let's explore what's inside our Fire Mountain!

Vent

The opening where hot lava escapes like a chimney!

Crater

The bowl-shaped top of the volcano like a giant cup!

Magma & Lava

Magma is melted rock inside; Lava is when it comes out!

The Chimney Rule:

Just like smoke leaves a kitchen through a chimney, the fire leaves a volcano through the Vent!

Magma vs. Lava

What's the Difference? Let's Find Out!

Think of it like juice! 🥤

Magma: Like juice inside a bottle — it stays underground.

Lava: Like juice poured out — it flows outside the volcano!

When magma comes out of the vent and becomes lava, it is very bright orange and red. It flows slowly down the mountain like **hot honey!**

The Three States of Volcanoes

The Sleeping Giant Story:

Volcanoes can be in different states, just like how we can be awake, sleeping, or have moved away!

State	Meaning
 Active	Awake and erupting (or will soon)!
 Dormant	A "Sleeping Giant" resting for now, but may wake up.
 Extinct	Gone forever — it will never wake up again.

Most volcanoes are sleeping giants, but scientists watch them very closely!

India's Volcanoes

Did you know India has its own Fire Mountains? Let's trace our home's history!

1. Barren Island

Located in the Andaman & Nicobar Islands, this is South Asia's only active volcano today!

2. The Deccan Traps

Millions of years ago, lava flowed in Maharashtra to make big hills. These show how volcanoes shaped India's land long ago!

Fun Fact: The soil in Maharashtra is often black because of ancient lava!

Recap: What We Learned

🎉 You are now a Volcano Expert! 🎉

🔥 A volcano is a mountain with magma inside.

🔥 **Vent** = Chimney, **Crater** = Cup.

🔥 **Magma** (Inside) vs. **Lava** (Outside).

🔥 **Active** (Awake), **Dormant** (Sleeping), **Extinct** (Gone).

🔥 Barren Island is India's active volcano!

VOLCANO EXPLORER BADGE

"Congratulations, Explorers! Keep exploring nature!"
