jam 🚗

Thumbs Up if you think you know!
👍

Meet Aarav from Jaipur

Hot geyser for his morning bath

Uses electricity and heats water – leaving an invisible mark.

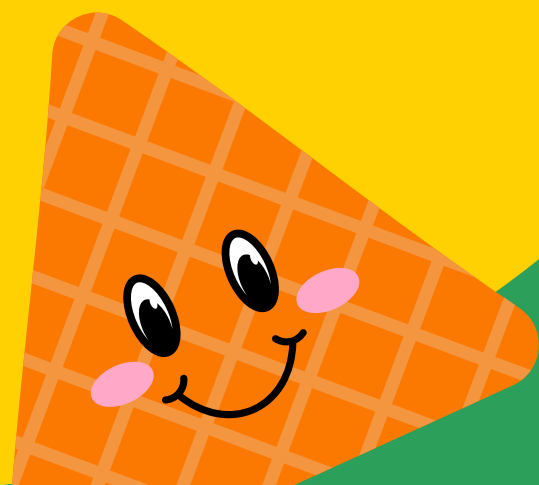

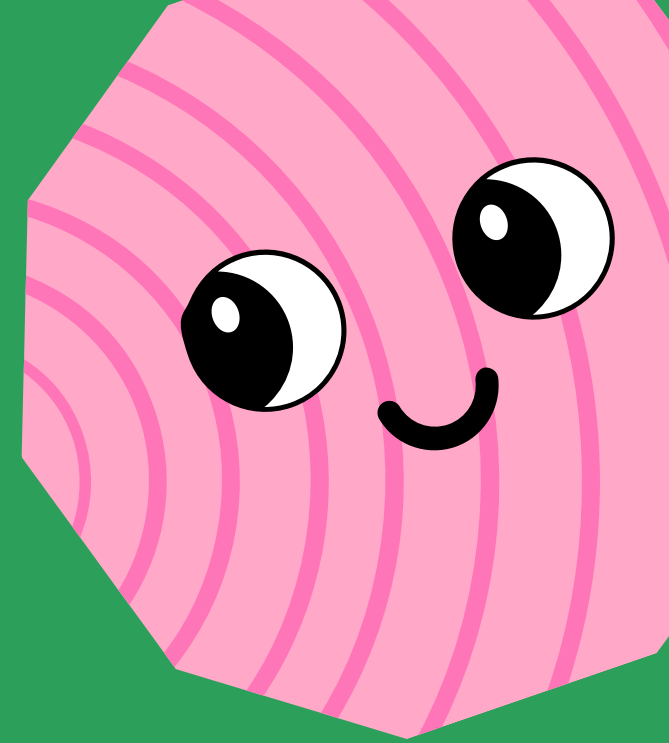

Plastic-wrapped biscuits for breakfast

Packaged food travels far and creates waste before it reaches us.

Car ride all the way to school

Aarav's day shows how small actions add up to an invisible footprint in the air.

What Is a Carbon Footprint?

Like footprints in wet sand – but invisible!

A carbon footprint is made of carbon dioxide (CO₂) released into the air. Just like footprints in sand, we leave a mark – but this one is invisible and warms our planet!

Every action leaves a mark on our Earth

Every time we use electricity, travel by car, or waste food – we add CO₂ to the air. The bigger the footprint, the more our Earth heats up.

Where Does Carbon Come From?

Direct Emissions: Vehicles

Tailpipe exhaust from petrol scooters & cars on the road.

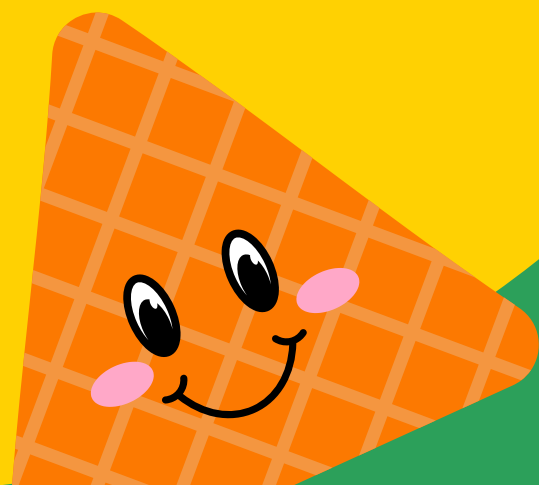

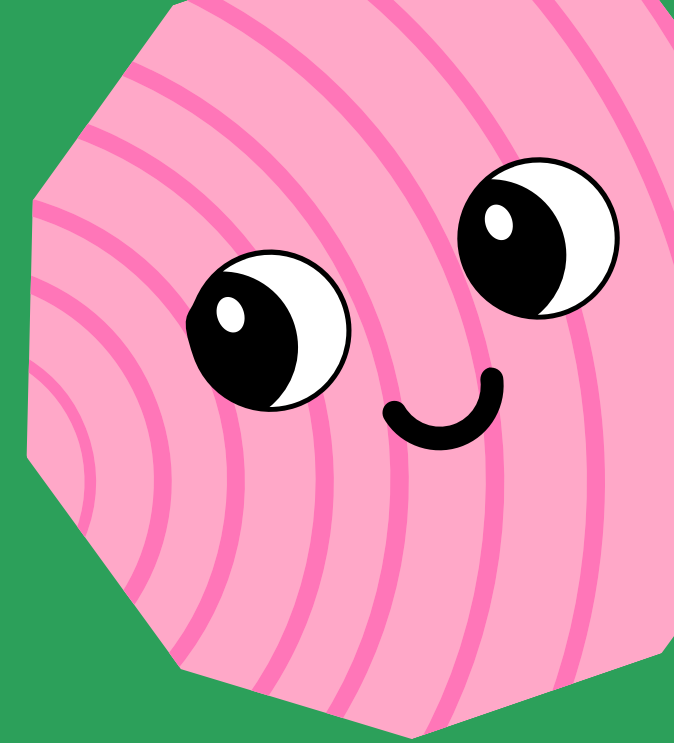

Indirect Emissions: Electricity

Coal plants like Korba & Singrauli power our homes & schools.

Food & Waste

Landfills like Ghazipur & imported snacks vs. local Nagpur oranges.

Let's Check Your Carbon Score!

Transport

Car, bus, cycle, auto – how do you travel each week?

Food

Local fruits or packaged snacks – what does your family eat?

Electricity

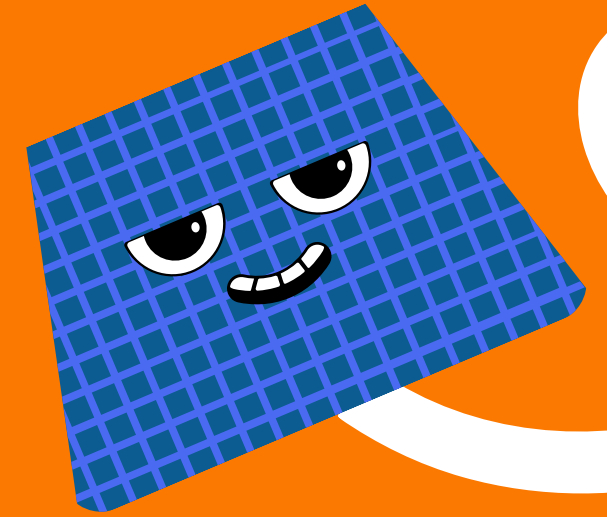

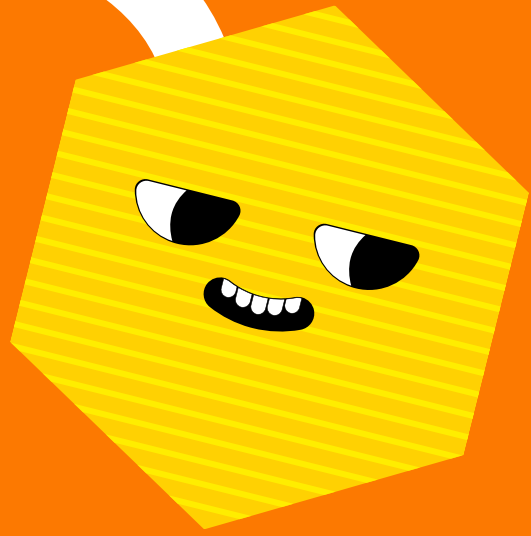

Fans, ACs, lights – how many hours do you use them?

Waste

Plastic bags, food scraps – how much waste does your home make?

How to Use Your Carbon Scorecard

Transport

How do you travel to school? Auto, cycle, or car? Tally your weekly trips!

Electricity

How many hours do you use a fan or AC each day? Count every appliance!

Food

Do you eat seasonal fruits from the mandi or packaged snacks? Note it down!

Waste

How many plastic packets does your family use each week? Track your waste!

Discover Your Eco- Color Zone

Green Zone – Low Footprint

Great job! Your family uses energy and resources wisely.

Yellow Zone – Medium Footprint

Good effort! A few small changes can shrink your footprint.

Amber Zone – High Footprint

Your zone shows how much you can shrink your invisible footprint!

What Did You Find?

Which pillar scored highest in your home? Why?

Think about Transport, Electricity, Food, and Waste. Which one does your family use the most? Share your answer with a friend!

Share with your class!

Did you spot families saving water with buckets, switching off fans, or carrying cloth bags? Every small habit counts!

Jugaad & Traditional Hacks

Bucket Baths

Use a bucket instead of a shower to save water and reduce energy used for heating.

Cloth Bag Jugaad

Repurpose old sarees and dhotis as sturdy, reusable cloth bags – zero plastic!

Repair, Don't Replace

Fix electronics at your local repair shop instead of buying new ones to cut waste.

Seasonal Mandi Fruits

Buy seasonal fruits from local mandis – less travel, less packaging, lower footprint!

Your Green Pledge Plan

Cycle to art class or school

Swap car rides for cycling – zero emissions, healthy body!

Take 5-minute bucket baths

Save water and energy every single day at home.

Unplug chargers when full

Switch off and unplug to cut your electricity footprint.

Challenge: Home Energy Detective!

Your Homework Mission

Check your home energy meter with your parents for 3 days. Write down the numbers each morning and evening!

Can You Spot the Energy Wasters?

Look around your home – which appliances use the most energy? Share your findings in our next session and earn your Detective Badge! 

Quick Quiz Check!

Which is a lower-carbon transport choice?

Raise your hand 🙋 or give a Thumbs Up 👍 for your answer!

Delhi Metro 🚆

Carries hundreds of people on electricity – much lower carbon!

Solo Car Ride 🚗

One person, one petrol engine – higher carbon emissions!

“ Metro Wins! Lower Carbon, Greener Ride! ”

Thank You & Keep Growing Green!

Let's grow a greener future together 🌱

Thank you for learning about your carbon footprint!

Ask your family about their green pledges!
