

PAINTING WITH CODE: CHANGING COLORS AND STYLES IN HTML

Drawn by

BEFORE

Welcome to my sweet shop
(Plain black text, boring white
background — no style at all!)

AFTER

Welcome to my sweet shop
style="color: orange; background-color: yellow;"
"We didn't buy a new screen; we gave a secret command!"

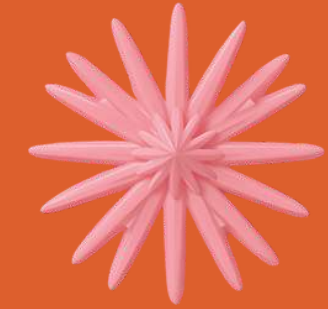

TAGS VS. STYLE

- HTML Tags are like plain clothes; Styles are colorful outfits!
-  Tags = Plain white kurta (gives structure)
-  Style = Shiny gold waistcoat or colorful sash (makes it beautiful!)
- Think of School Annual Day — your kurta is the tag, but the sparkling waistcoat is the style!
- Without style, HTML is plain. With style, it shines like festival wear!

COLOR IS LIKE A MAGIC SKETCH PEN!

CHANGE TEXT COLOR

`style="color: blue;"` changes the color of your text — just like picking a sketch pen color!

SKETCH PEN HIGHLIGHTS

Black is the default, like a plain gel pen. Change colors anytime to make your words bright and fun!

DEFAULT & CUSTOM COLORS

Like using a blue or green sketch pen to highlight homework — your words pop with color!

BACKGROUND COLOR!

Background Color is like painting the wall behind your words!

🎨 background-color changes the color behind your text

🪔 Like painting walls during Holi or Diwali to make decorations pop!

✨ Bright backgrounds make your text stand out and look beautiful!

Try: `style="background-color: yellow;"`

BREAKING DOWN THE MAGIC CODE SPELL

HOUSE DOOR OPEN

`<h1`

Open the door — let the tag
begin!

MAGIC STYLING SPELL

`style="color: red;"`

The magic styling spell
goes right here!

CLOSE LOCK

Close the lock — shut
the door tight!

LET'S PAINT A RAINBOW WEB!

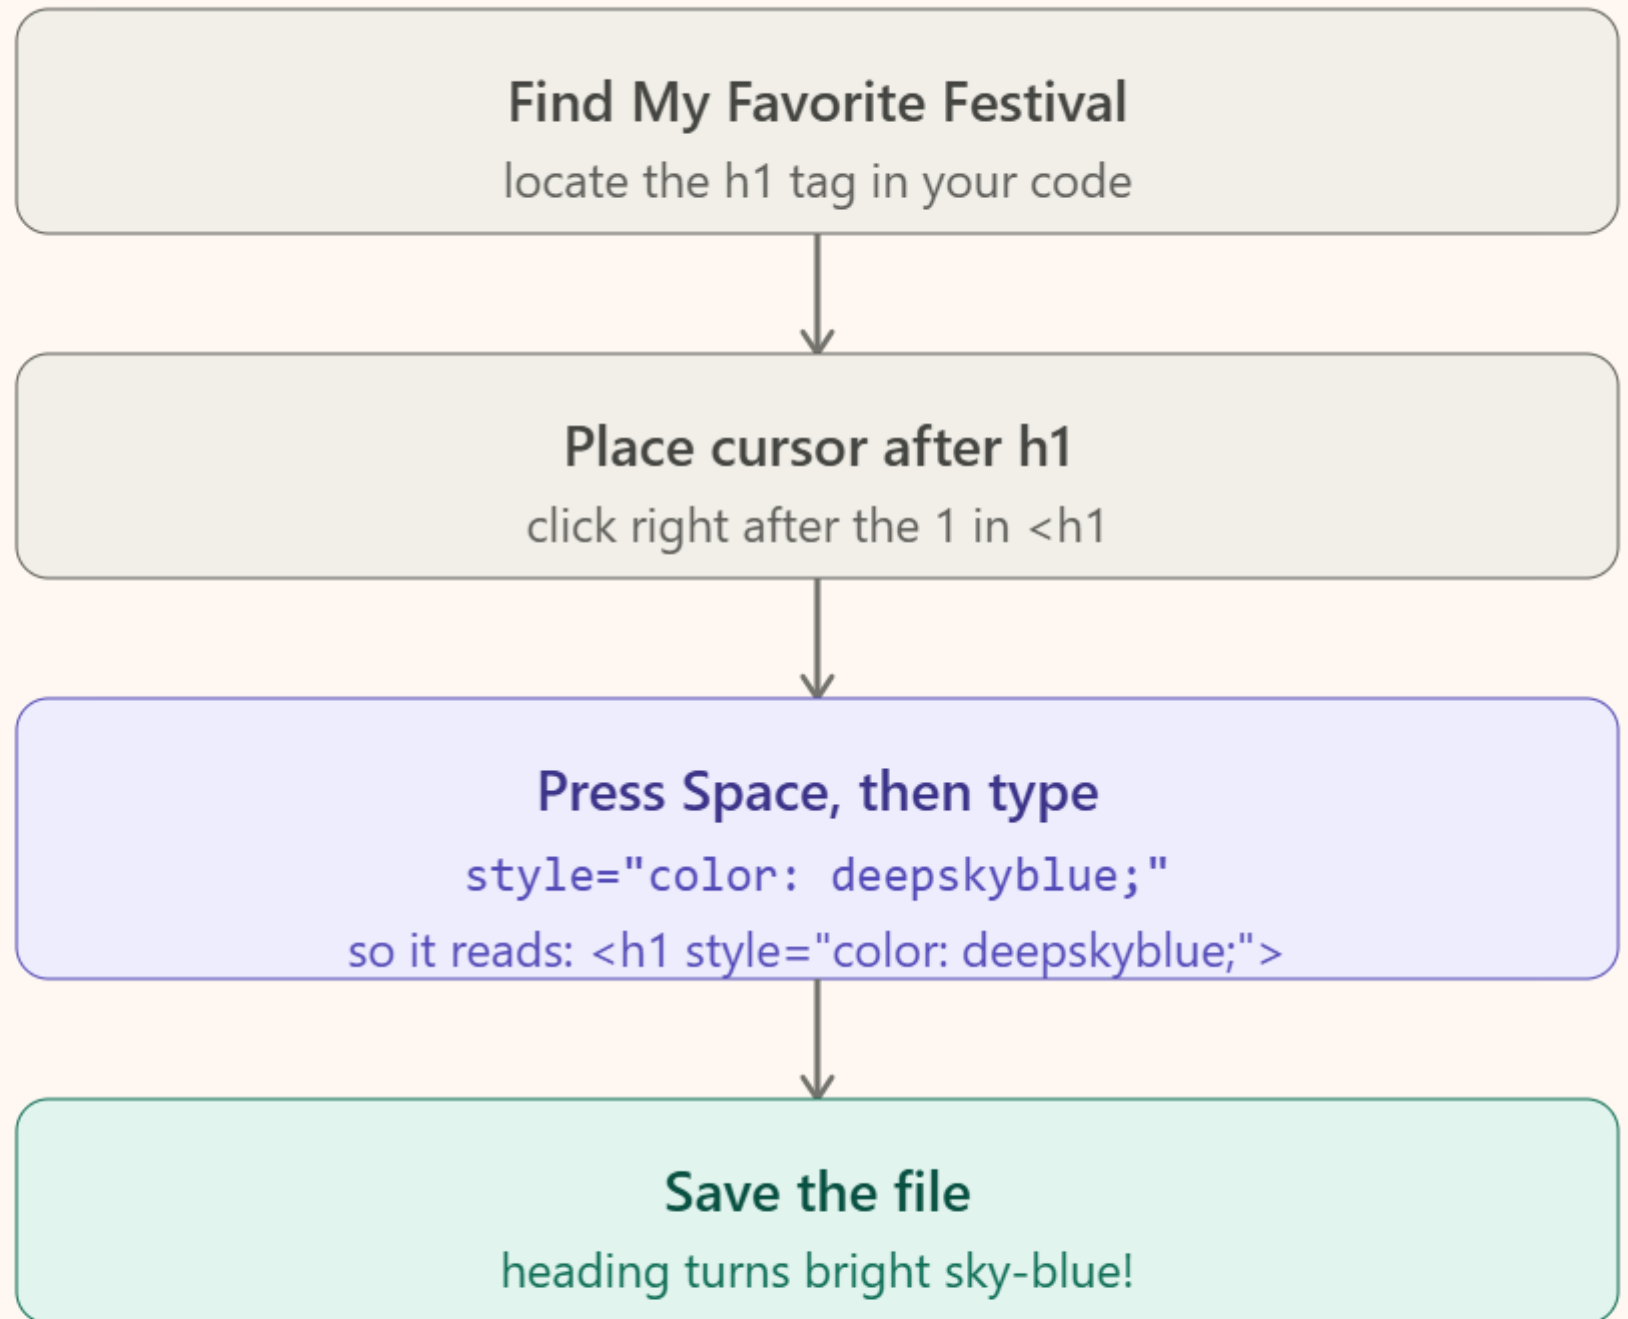

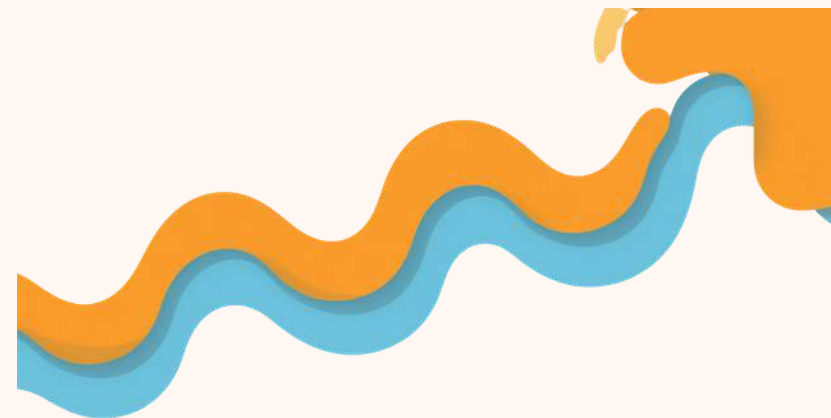

Step 1: Find My Favorite Festival in your code.

Step 2: Place your cursor right after the 1 in h1.

Step 3: Press Space, then type: `style="color: deepskyblue;"`

Step 4: Save and see your heading turn bright sky-blue!

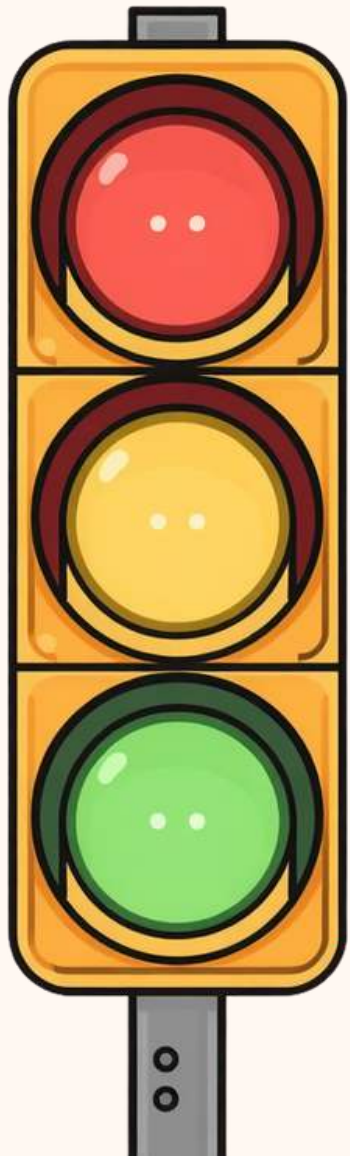

Your code now reads: My Favorite Festival

My Favorite Festival

THE SEMICOLON (;) IS LIKE A TINY CAR BRAKE!

When you write `style="color: red;"`, the semicolon (;) at the end is like pressing the brake pedal of a car. It tells the browser: "Stop here! This style rule is done!" Without the brake, the magic spell runs forever and gets confused!

THE COLON (:) IS LIKE A TRAFFIC LIGHT!

The colon (:) tells the browser WHAT to do with the color. It says: "Here comes the color name!" Think of it like a green traffic light — it signals GO and shows the value. Colon says WHAT, Semicolon says STOP!

CHOOSE YOUR SWEET SHOP COLORS!

KESAR PISTA
GREEN + SAFFRON

style="color: green;
background-color: orange;"
Fresh pistachio green text on
warm saffron background!

GULAB JAMUN
PINK + BROWN

style="color: hotpink;
background-color: saddlebrown;"
Sweet rose pink text on rich syrup
brown background!

KULFI
WHITE + CREAM

style="color: white;
background-color: lightyellow;"
Pure white text on soft creamy
yellow background!

RECAP & BUG SPOTTER!

style controls color

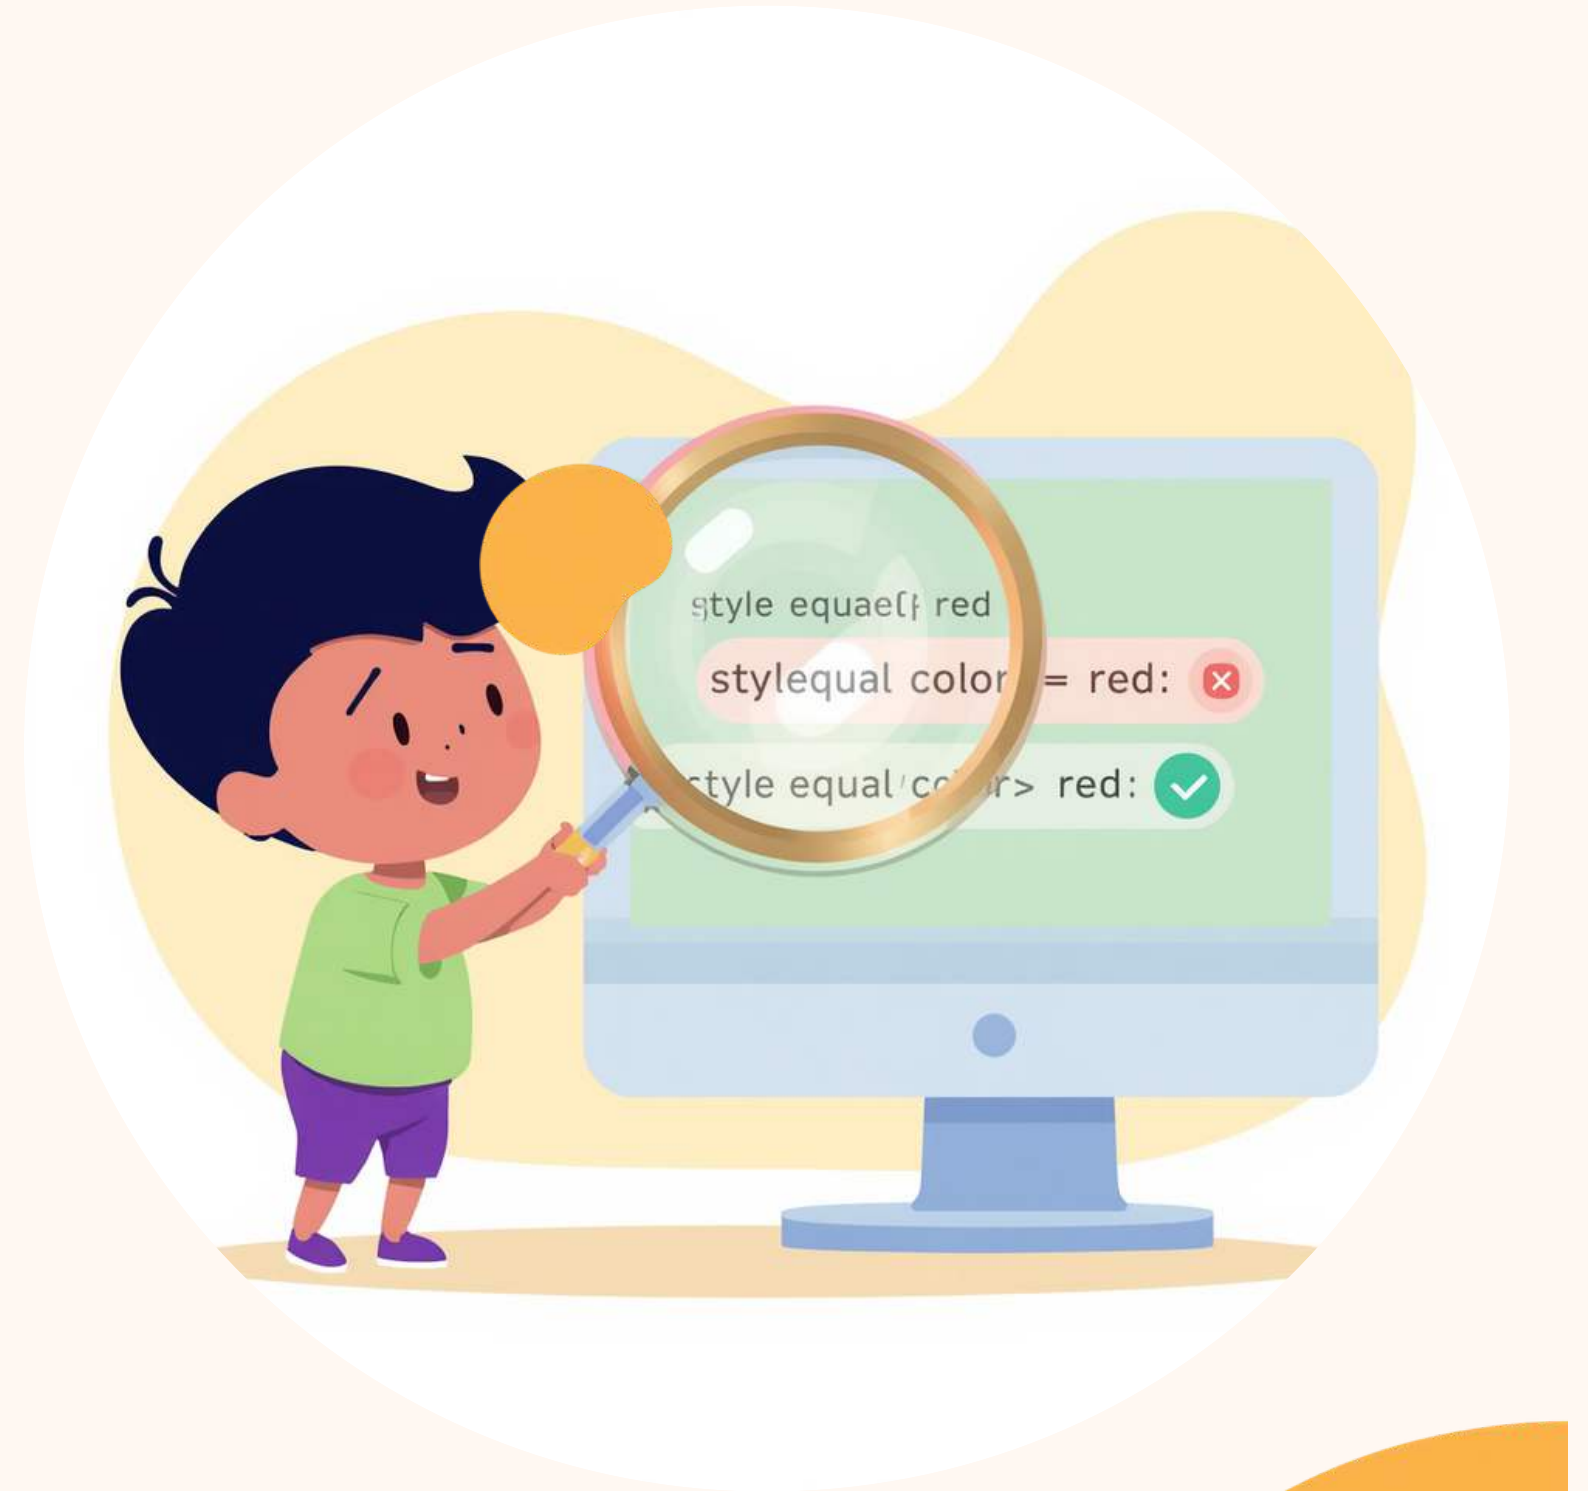

Use colon : after property

Semicolon ; ends the rule

Spot the Bug!

style="color=red" ❌

style="color: red;" ✅

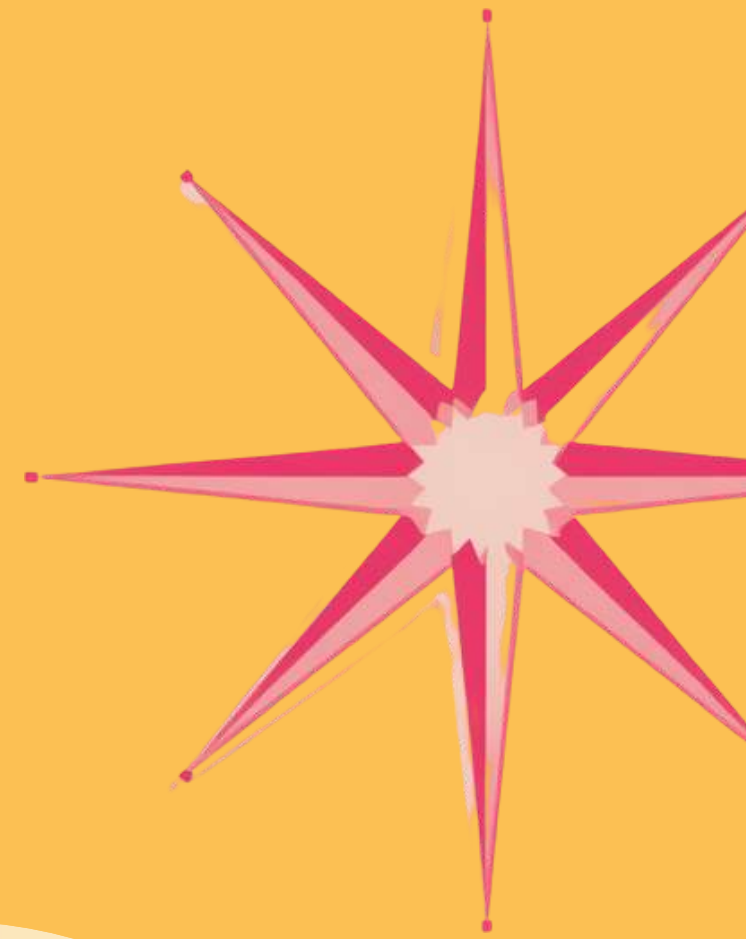

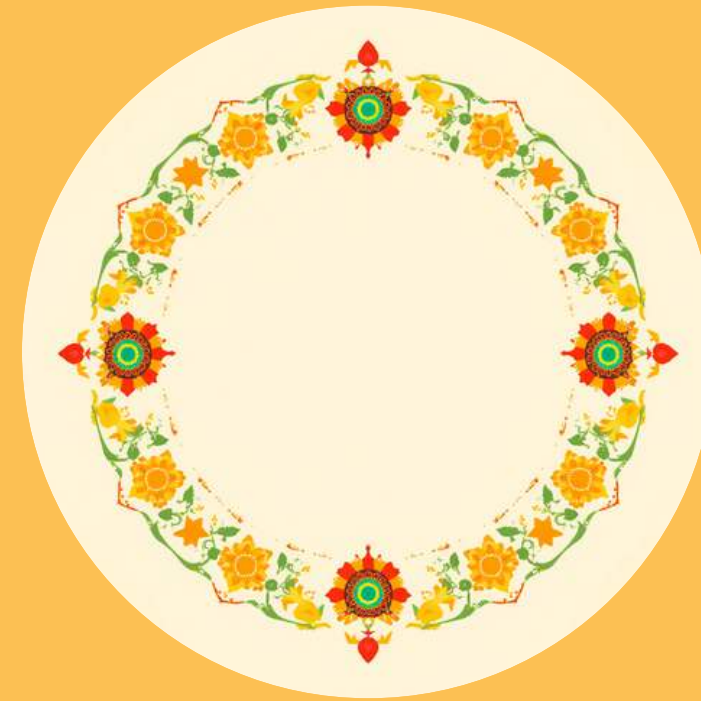

LOOK! FESTIVAL GREETINGS PAINTED WITH CODE

Diwali: style="color: gold; background-color: purple;"

Eid: style="color: green; background-color: white;"

Christmas: style="color: red; background-color:
darkgreen;"

Pongal: style="color: orange; background-color: yellow;"

OUR COLOUR & STYLE GOALS

TAGS & ATTRIBUTES

Understand tags and attributes
as special commands that tell
the browser what to do!

STYLE ATTRIBUTE

Confidently type and edit color
code — and recognize color
names inside quotes!

COLOUR CODING

Use the style attribute to
change text color and
background-color in your
HTML code.

YOUR HOME QUEST

Create at Home

Make your own colorful webpage!

Show Your Family

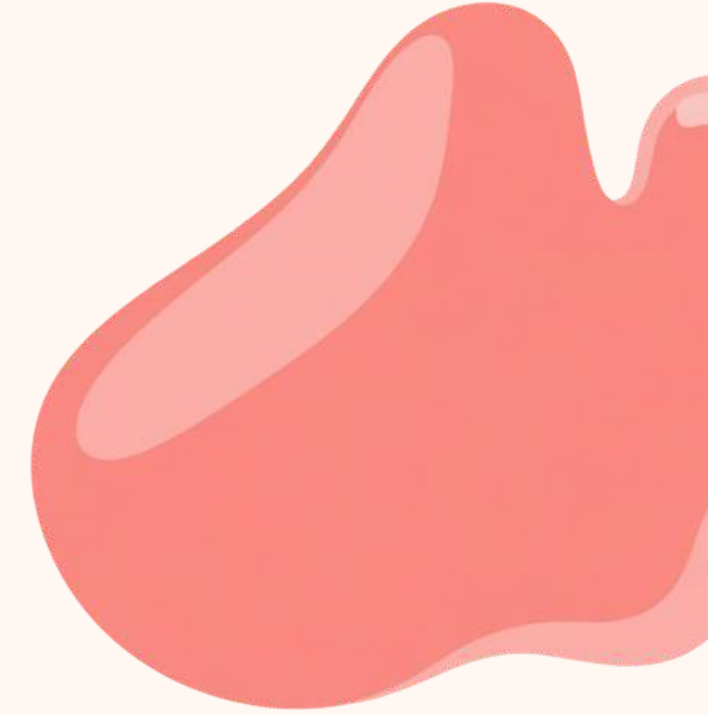

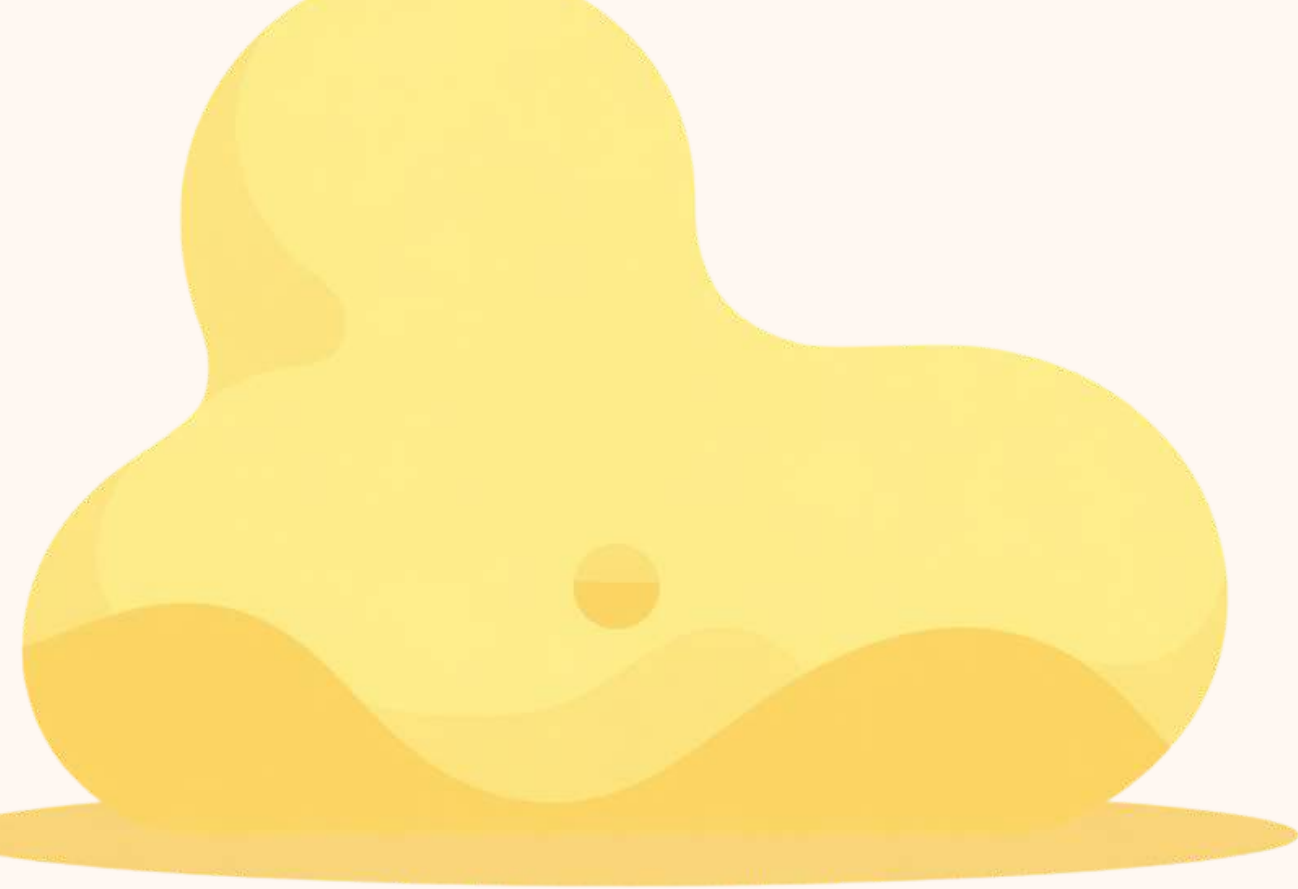

Show your painted webpage with pride!

Try Festival Colors

Use colors from Diwali, Holi & Indian sweets!

**THANK YOU FOR
PAINTING WITH CODE!**
