

MY FIRST WEBPAGE

An HTML Code Adventure
for Little Creators!

Building a Digital Toy House 🏠

The Secret Website Code! 🔍

Did you know that every website you visit is made using a secret code language?

Every colorful website — games, videos, stories — is built with hidden code bricks called **HTML**!
They fit together like Lego blocks forming a beautiful toy house!

Meet Dev and Nia — your coding guides! 👩👧💻

The HTML Tiffin Box 🍱

Think of HTML structure as a nested steel school tiffin box!

Container 1: The Big Steel Clip 🗑

The OUTER layer — everything on your entire website lives inside this giant box!

Container 2: The Small Snack Tray 🍷

Holds your custom nameplate sticker — tells the browser what title tab to display at the top!

Container 3: The Big Main Meal Box 🍲

The LARGEST container — every word, heading, and photo you actually see on screen lives here!

Lock and Key Pairs!

Every code command comes inside a special matching pair called TAGS!

The Opening Tag

Like popping open your pencil box lid to start typing words.

```
<h1>
```

The Closing Tag

Like snapping the pencil box lid shut when you are finished.

```
</h1>
```

The / (forward slash) = Lock Key → tells the browser: DONE, close the box!

Meet the Main Code Blocks!

Four essential tags that build your digital toy house:

`<html>`

Opens the grand entrance door to your website castle.

`<head>`

The smart brain center holding your nameplate identity records.

`<title>`

Writes your custom name sticker onto the browser's top bar.

`<body>`

The huge main stomach core — all visuals, words, and art live here!

Your Toy House Code Blueprint

This is how our tiffin containers look in real code!

```
<html>

  <head>

    <title>My First Web Castle</title>

  </head>

  <body>

    [Your content goes here!]

  </body>

</html>
```

Notice how:

- ✓ Each tag has a matching closing tag
- ✓ Head closes BEFORE body opens
- ✓ Tags nest like tiffin boxes
- ✓ The slash / closes the box

The Giant Heading Brick! 👑

In HTML, we create big bold title banners using the

`<h1>`

tag — like a huge shop banner at a marketplace!

How to type a Giant Title:

```
<h1>Welcome to My Secret Fort!</h1>
```

Browser Preview

Welcome to My Secret Fort!

Code on the left side = Big bold heading on the right side! ✨

Exploring Your Code Playground 🎮

Now it's time to test your skills in the digital sandbox!

CODE EDITOR

```
<html>

  <head>

    <title>My Page</title>

  </head>

  <body>

    <h1>Hello!</h1>

  </body>

</html>
```

LIVE PREVIEW

Hello!

Left: Your raw code lines in rainbow colors

Right: Instantly updates to show your design!

Activity: Build Your Kingdom Title! 🏰

Let's become real website architects! Follow the 4 steps on your workstation:

1

Find the Stomach Area

Click your cursor inside the space between the `<body>` and `</body>` tags.

2

Type the Banner Code

Carefully type out: `<h1>`

3

Write Your Kingdom Name

Type something fun like: Aarav's Magic Castle or Priya's Toy Kingdom!

4

Snap the Lock Lid Shut

Close your tag with: `</h1>`

Check Your Live Success! 🎉

Look to the Right Panel Screen! ✨

Wow! Your beautiful bold heading appears instantly on your web window screen!

Try tweaking your title three times using different words like:
"Super", "Awesome", or "Secret"

...and watch your code update in flash speed!

Preview

**Welcome to
My Secret Fort!**

🚀 Code Typed on Left Side = Big Visual Magic on the Right Side!

Pop Quiz Time! 🧠

What key symbol tells the computer that a tag is CLOSED and finished?

A

A star symbol *

Stars look great in the sky — but they don't lock our code box lids!

B

A forward slash /

BINGO! The forward slash always locks up our code tags! ✓

C

A question mark ?

Question marks ask questions — they don't finish a tag task!

What We Learned Today! ★

HTML

The secret building blocks language of ALL websites worldwide.

Tiffin Layouts

Code organizes into smart nested boxes fitting inside each other.

Tag Pairs

Tags always move in pairs — like matching lid covers and base boxes.

The Slash Key

The forward slash / signals "DONE!" to the web browser.

H1 Bricks

The large heading tag outputs a giant, proud headline on screen.

See You in Next Session ! 🖐️

Thank you for exploring our coding playground today!

Happy Coding, Little Software Master! ✨
