

Scratch — Events

(When Key Pressed)

What Are Events?

An event is something that happens.

In real life:

- A doorbell rings — you open the door
- An alarm goes off — you wake up

In Scratch, events tell the computer:

"When THIS happens, do THAT!"

When Multiple Keys Are Pressed

You can use more than one
"When key pressed" block!

Each key does something different:

- Press A — sprite moves left
- Press D — sprite moves right
- Press W — sprite jumps
- Press S — sprite says "Hello!"

Just add a new block for each key.
They all work at the same time!

Which Keys Can We Use?

You can pick from many keys:

- Letters: a, b, c ... z
- Arrow keys: up, down, left, right
- Space bar
- Number keys: 0–9

Each key can do something different!

Let's Try It! — Move Right

Step 1: Open Scratch

Step 2: Choose a sprite (like the cat)

Step 3: When [right arrow] key
pressed

move 10 steps

Step 4: Press the right arrow key!

Watch your sprite walk right!

Let's Try It! — Move Left

Now let's move LEFT!

When [left arrow] key pressed
move -10 steps

The minus sign means
go backwards (to the left)!

Try pressing left arrow now!

Move Up and Down

To move UP:

When [up arrow] key pressed
change y by 10

To move DOWN:

When [down arrow] key pressed
change y by -10

"y" means up and down direction!

Make It Say Something!

Keys can do more than move!

Try this:

When [s] key pressed
say "Hello!" for 2 seconds

Now press the S key —
your sprite talks!

You can change the message
to anything you like.

Change Costume with a Key

Want your sprite to change looks?

Try this:

When [c] key pressed
next costume

Every time you press C,
your sprite changes its costume!

This is great for animation.

Play a Sound with a Key

Keys can play sounds too!

Try this:

When [m] key pressed
play sound [Meow] until done

Press M and hear your sprite!

You can pick any sound
from the Sound Library.

Mini Project: Keyboard Pet!

Let's make a keyboard pet!

1. Pick a cute animal sprite
2. Arrow keys → move it around
3. Press S → it says "Feed me!"
4. Press C → it changes costume
5. Press M → it makes a sound

Your pet listens to YOUR keys!

What Did We Learn?

Today we learned:

- ✓ Events tell Scratch WHEN to act
- ✓ "When key pressed" listens for keyboard keys
- ✓ We can move, talk, change costume, and play sounds
- ✓ Many keys can work together

You are now a Scratch Events pro!

Thank You! 🎉

Great job today, coders!

Keep exploring Scratch at home.
Try adding MORE keys
and MORE actions!

What will YOUR sprite do next?

Happy Coding! 💻🎮
