

Sorting & Classifying with AI & Digital

What is Sorting?

Sorting means putting things
in order or into groups.

We sort toys, clothes, and
books every day!

Why Do We Sort Things?

Sorting helps us find things quickly and keep things neat.

- * Find toys faster
- * Keep our rooms clean
- * Share things easily with friends

Sorting Toys

We can sort toys in many ways:

- * By colour (red cars, blue cars)
- * By size (big and small dolls)
- * By type (blocks, cars, puzzles)

Sorting Clothes

We can sort clothes too:

- * By type (shirts, pants, socks)
- * By colour (light and dark)
- * By season (summer and winter)

Sorting Books

We can sort books:

- * By size (big and small books)
- * By topic (storybooks, picture books)
- * By author or series

What is Classifying?

Classifying means putting things into groups that are alike.

All the animals with four legs are in one group!

Sorting & Classifying in Computers

Computers sort and classify to help us find information fast.

Example: sorting photos by date or by the faces in them!

How Does AI Sort and Classify?

AI learns to sort and classify by looking for patterns.

Example: AI sorting pictures of animals by type (cat, dog, bird)

Sorting Games You Can Play!

Try these sorting activities:

- * Sort your toys by colour or size
- * Group your clothes by season
- * Arrange your books by topic
- * Sort your crayons by shade!

Activity: Sorting Challenge

Can you sort these items?

Try sorting by colour or size!

Think about what makes each group the same.

Before and After Sorting

Before: Everything is scattered
and mixed up!

After: Everything is neatly sorted into groups!

Why AI Sorting Helps Us

AI sorting helps us every day:

- * Finds information quickly online
- * Helps apps recognise photos
- * Makes games smarter and fun
- * Helps doctors and scientists!

Thank You!

Thank you for learning with us!

Keep sorting, classifying,
and exploring every day!
