

Python – Reading & Writing Files: The Digital Secret Diary

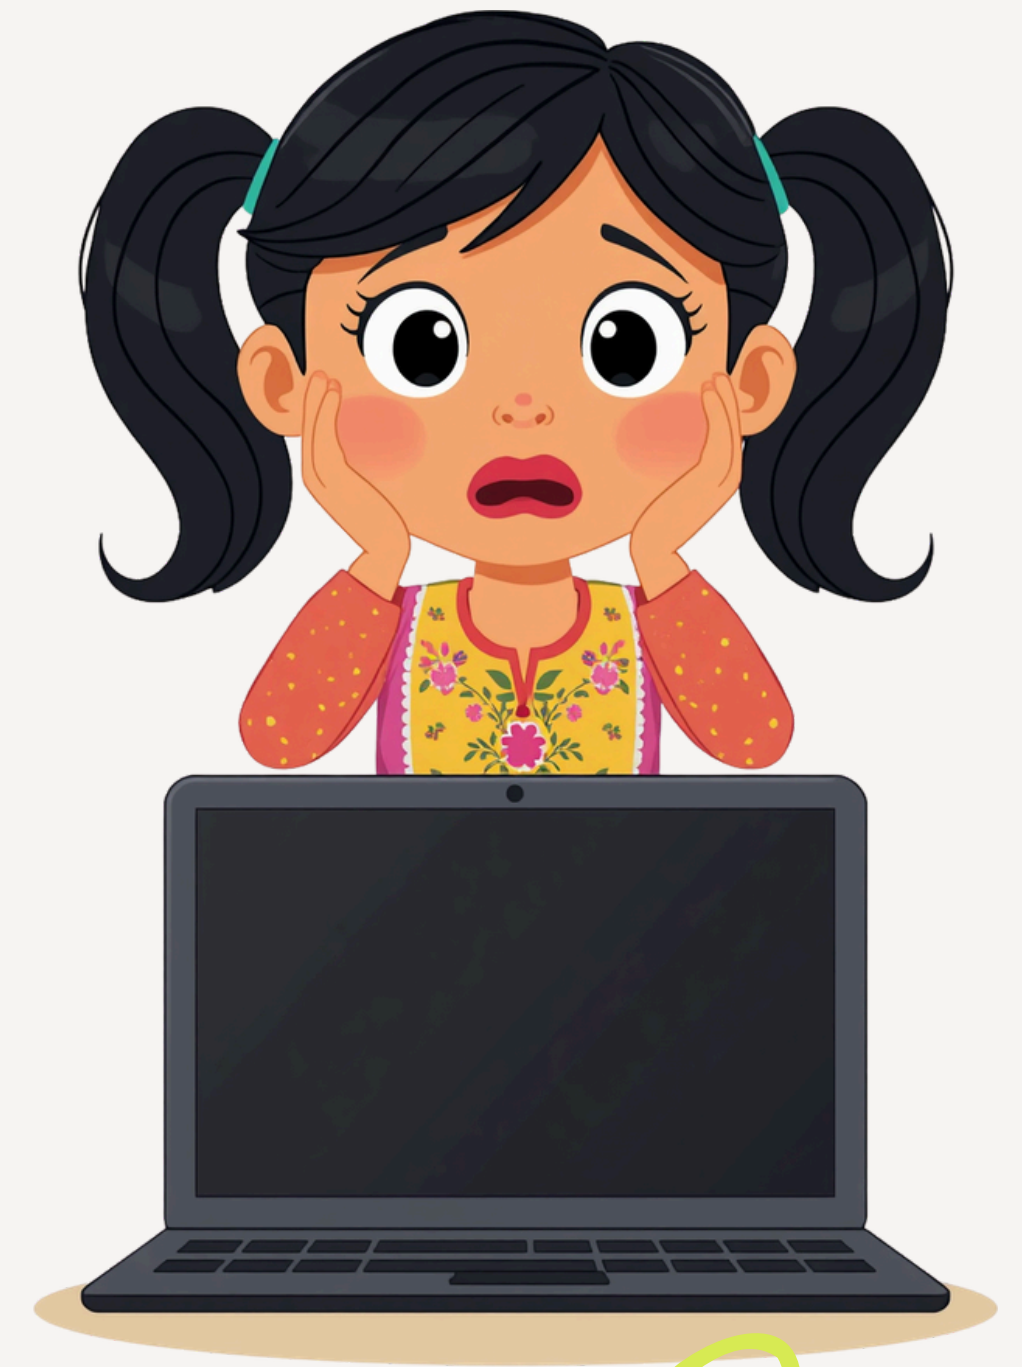

A magical journey into saving your
secrets like a real diary

The Memory Loss Mystery

Diya scored 9,999 runs in her cricket game -
but oh no! When her laptop shut down, her
score disappeared!
How can Diya keep her high score safe forever?

Blackboard vs Notebook: Where Do We Keep Our Notes?

Blackboard

Wiped clean every day by the peon with a duster - just like variables in a program that disappear when you close it!

Notebook

Keeps your notes safe in your school bag forever - just like files that save information permanently on your computer!

The 3-Step File Magic ✨

Step 1: Open
Like opening your
secret diary 📖

Step 2: Write or
Read
Write secrets or
read old notes ✎

Step 3: Close
Lock the
diary with a
tijori lock 🗝

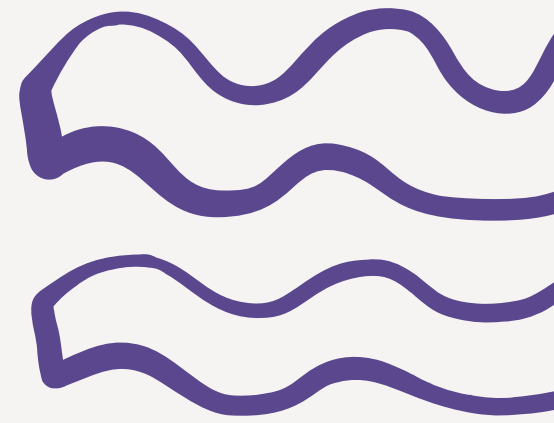

Writing Your Secret Diary

Just like opening a new diary with a sharpened pencil to write your secrets!

- 📖 `open("diary.txt", "w")` opens a fresh diary for writing
 - ✎ The "w" means write mode — ready to fill the pages
 - 🔒 Always close your diary safely when done!
- 

Guided Code-Along!

Let's write our secret
diary together – line
by line!

```
secret_file = open("diary.txt", "w")
```

```
secret_file.write("My high score is 9999 runs!")
```

```
secret_file.close()
```

Done! 

 Open the diary for writing –
like picking up a fresh notebook!

 Write your secret
message inside the diary!

 Close and lock the diary safely –
never forget this step!

 Your secret is saved forever –
Diya's score is safe!

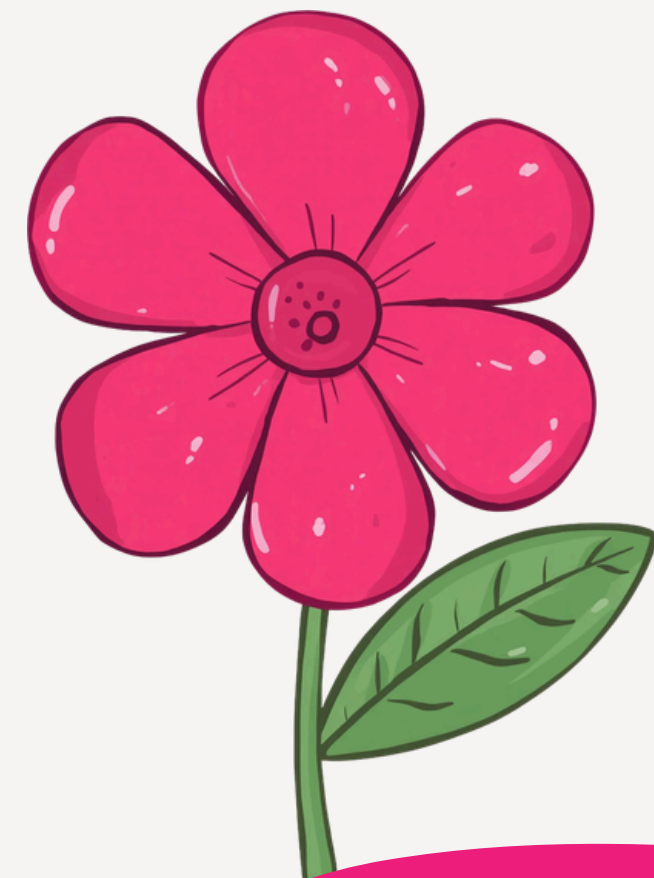

Writing IN ACTION!

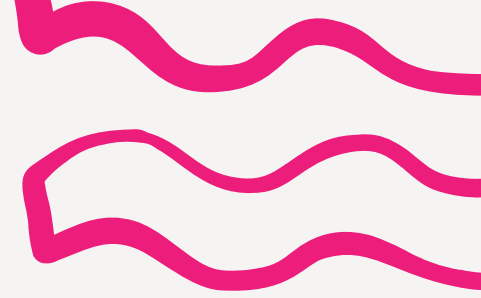

Always remember –

.CLOSE()

to lock your

SECRETS SAFE!

Reading Your Secret Diary

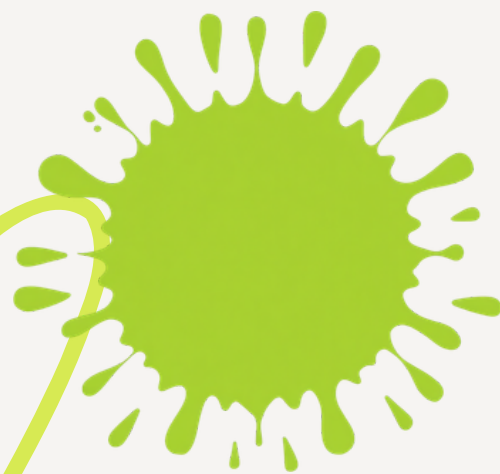

Just like opening grandfather's old recipe book carefully — you can read the recipes but not change them!

`open("diary.txt", "r")` means opening your diary to read only. 📖

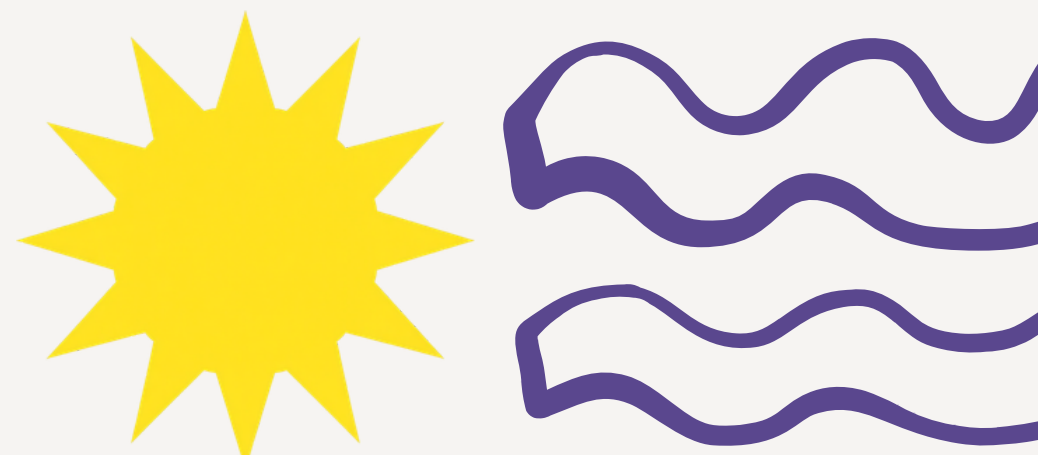

Read your saved
secret from the
diary – step by step!

Guided Code- Along: Reading Diary Entry

```
read_file = open("diary.txt", "r")
```

Open the diary for reading only – like
peeking inside without a pen!

```
secret_message = read_file.read()
```

Read your saved secret and store it
in a variable

```
print(secret_message)
```

Show your secret message on the
screen for everyone to see!

```
read_file.close()
```

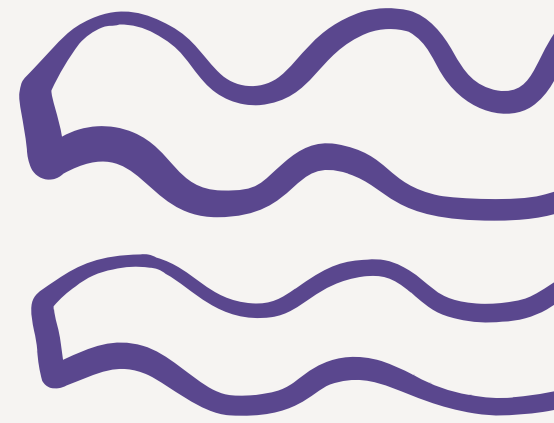

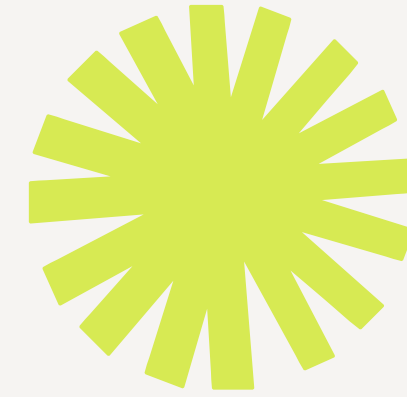

Close the diary after reading – always
lock it safely!

Bug Hunting with Bungler

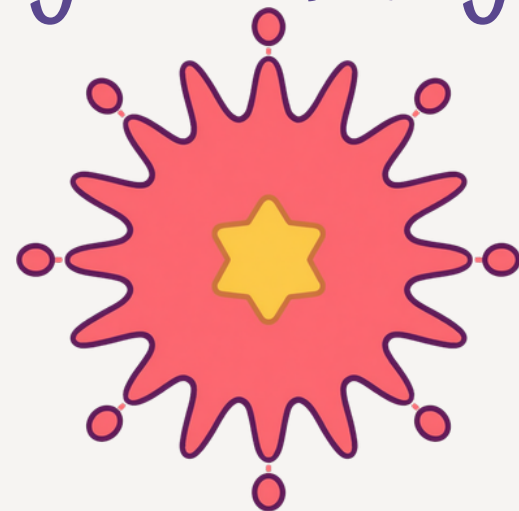

Bungler forgot to close the diary and now digital oil is leaking everywhere! Oops! What happens if you forget to close your diary?

Why Closing Files Matters

Always close your file after use – like locking your diary!

Files Stay Open

Open files can cause problems and slow down your program!

Data Not Saved

Your secrets might not be saved properly if you forget `.close()`

Blocked File

Other programs cannot use the file while it is still open!

Messy Computer

Like Bungler's dripping oil – your computer gets messy and confused!

Summary!

`open()` Magic

File storage keeps your secrets safe forever! Use `open("diary.txt", "w")` to write and `open("diary.txt", "r")` to read your secrets anytime.

`.write()` & `.read()`

Write your secrets with `.write()` and read them back with `.read()` — just like a real diary!

Always `.close()`!

Always lock your diary safely with `.close()` — or your secrets might leak like Bungler's digital oil!
You are now a File Captain!

Thank You & Happy Coding!

Thank you for learning the secret diary magic with us!

`open()` – write your secrets!

`.write()` – save your message!

`.read()` – read your secrets back!
