

Python Lists: Store & Loop Fun with Coding for Grade 3!

What Are Lists in Python?

A list is a way to store many things together
in one place!

Like a basket holding fruits! 🍇

```
fruits = ["apple", "banana", "mango"]
```

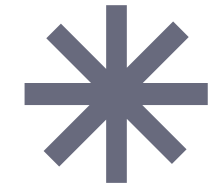

Why Use Lists?

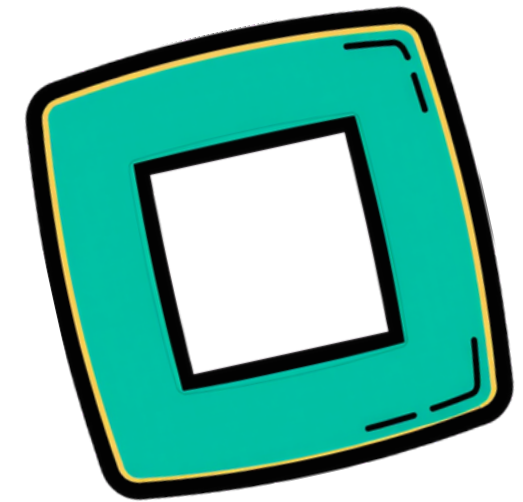

- Keep many pieces of information together
 - Easy to find and use items
- Helps computers remember things!

How to Make a List in Python

Use square brackets [] to make a list!
`fruits = ["apple", "banana", "mango"]`
Each item is separated by a comma inside the brackets.

APPLE
BANANA
MANGO

Meet Our Friends!

```
friends = ["Asha", "Ravi", "Meena", "Arjun"]  
favorite_foods = ["samosa", "idli", "jalebi",  
                  "paneer"]
```

Lists connect coding to real life!

What Is a Loop?

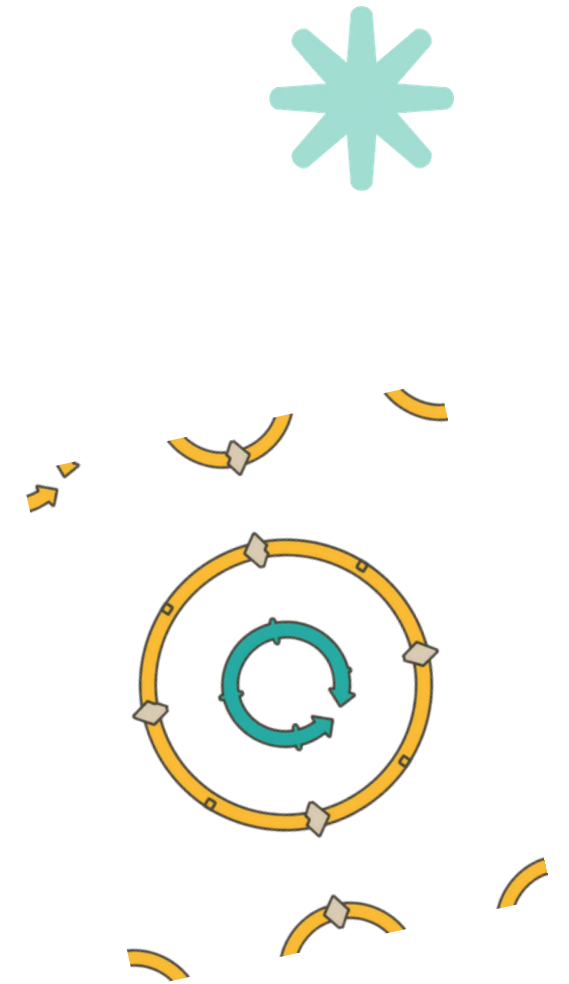

Loops help us do the same thing many times!

Like repeating a dance move — you do the same steps again and again!

The 'for' Loop in Python

We use the 'for' loop to look at each item in a list.
`for fruit in fruits:`
`print(fruit)`

Looping Through Our Friends List

```
for friend in friends:  
    print(friend)  
Asha → Ravi → Meena → Arjun
```

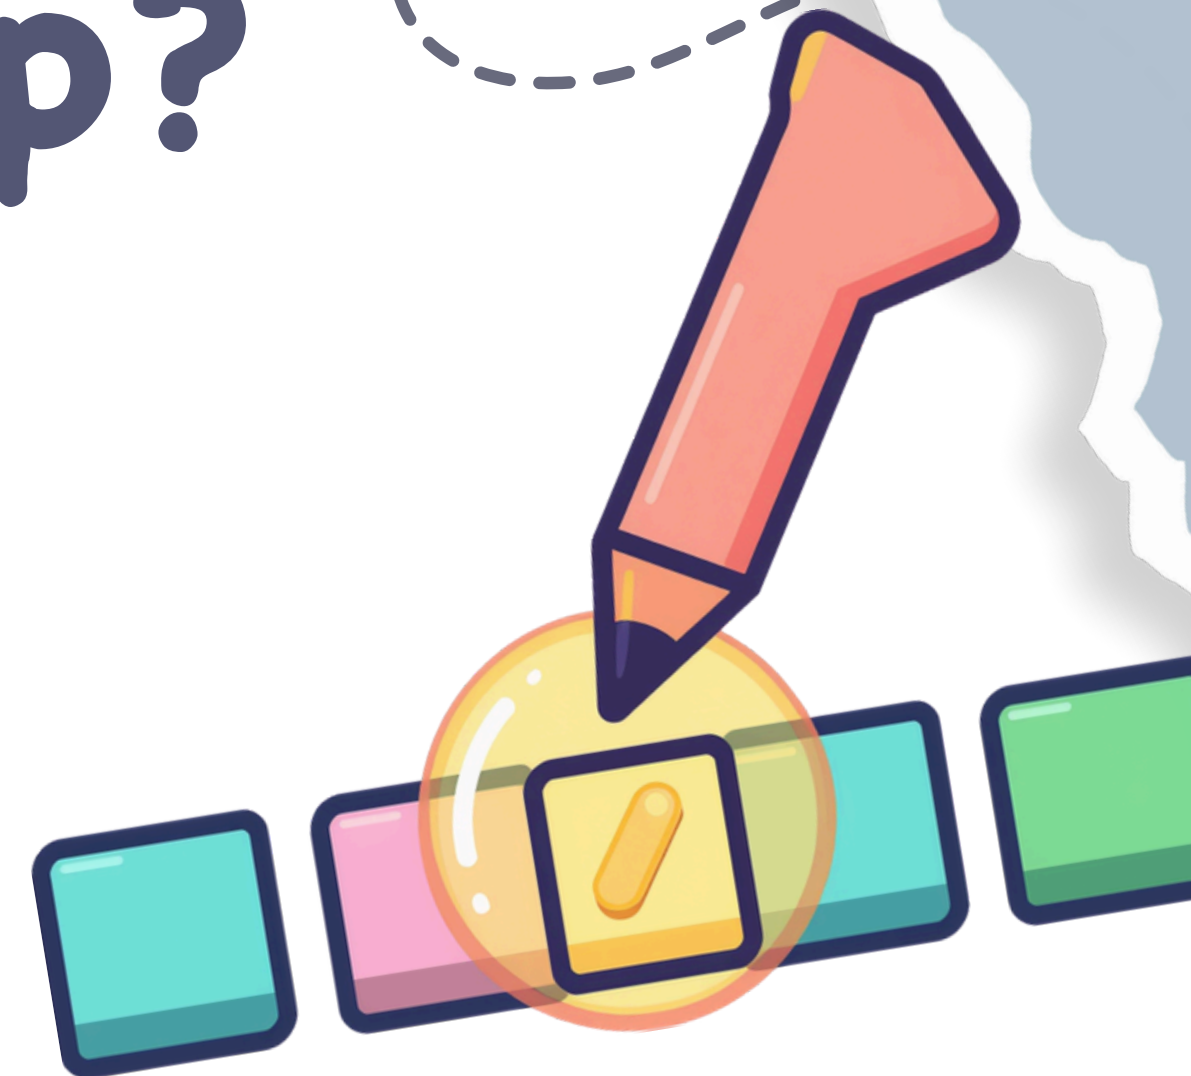

What Happens Inside the Loop?

Each time, the loop picks one item and uses it!

- ✓ Picks the first item
- ⚡ Does the action (like print!)
- ➡ Moves to the next item

Let's Print Favorite Foods!

```
for food in favorite_foods:  
    print(food)
```

Output: samosa, idli, jalebi, paneer 🍴🍽️

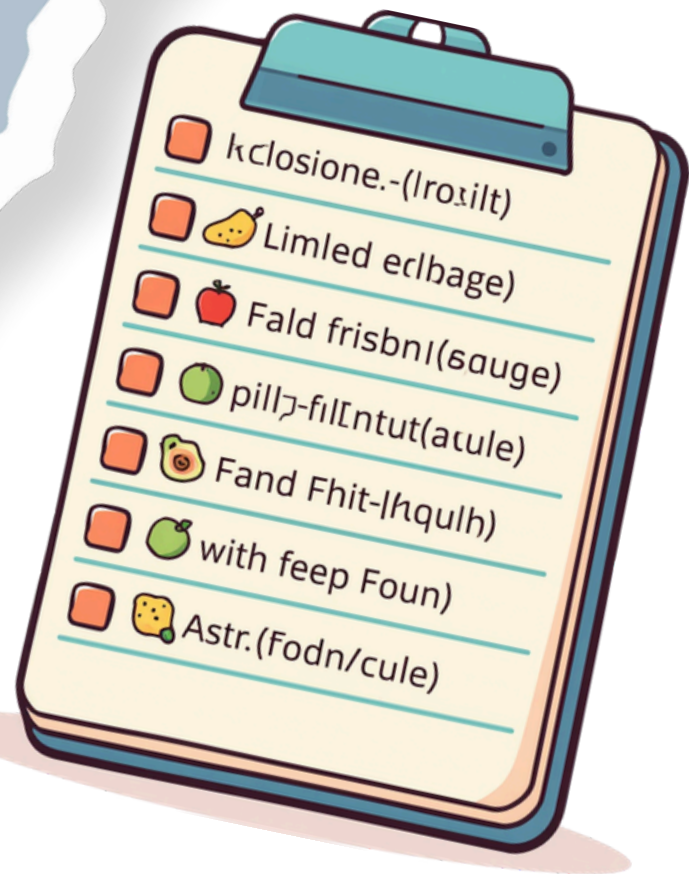

Using Loops to Say Hello!

```
for friend in friends:  
    print("Hello, " + friend + "!!")  
Each friend gets their own greeting!
```

What Did We Learn?

- ✓ Lists hold many items together
- ✓ Use [] to make a list in Python
- ✓ Loops repeat actions for each item
- ✓ Coding can be fun and creative!

Try It Yourself!

Create a list of your favorite animals and
print each one using a loop!

```
animals = ["cat", "dog", "elephant"]
```

```
for animal in animals:
```

```
    print(animal)
```

You can do it! ✨

Common Mistakes to Avoid!

- ❑ Don't forget the square brackets [] around your list!
- ! Remember the colon (:) after the 'for' line!
- ➡ Indent the print line inside the loop!

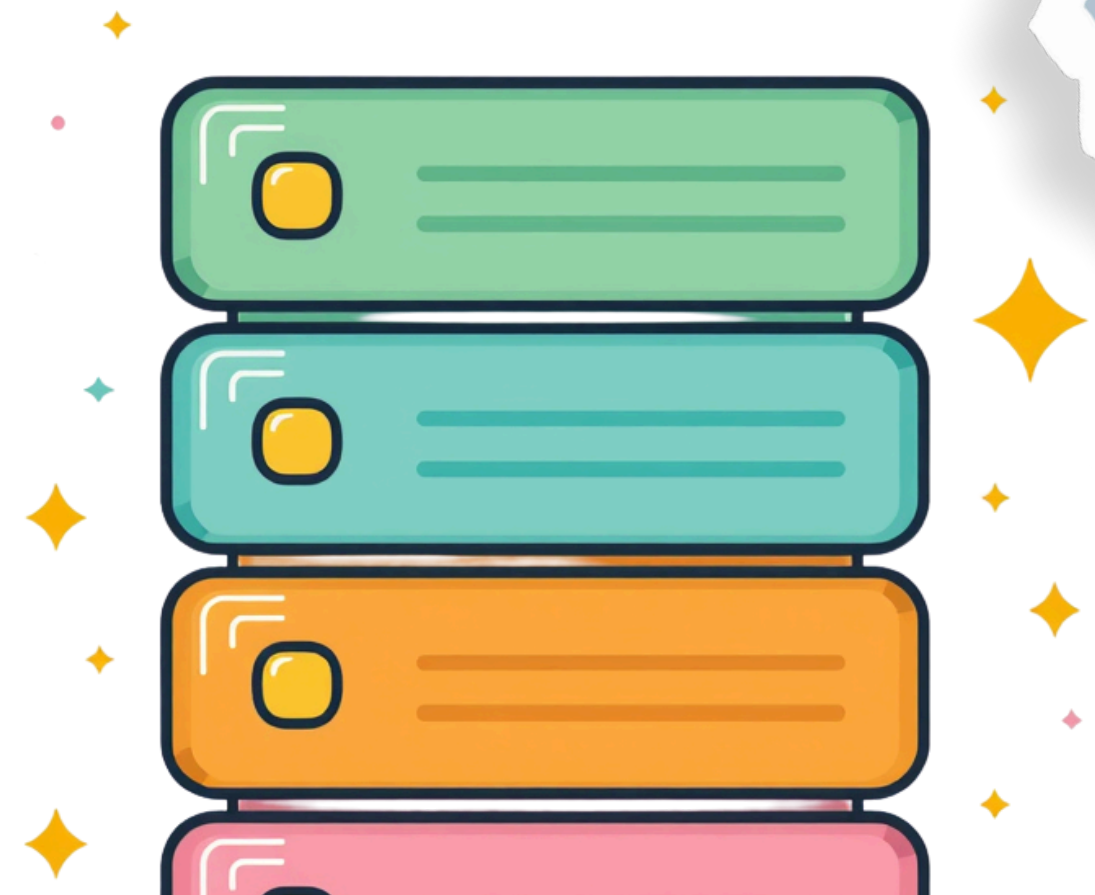

VECTOR SEATINN

More Fun with Lists & Loops!

Add more items to your list
Use numbers or colors in lists
Combine lists to tell stories in code!

Thank You & Keep Coding!

Great job! Keep exploring Python lists and
loops!

You are a coding star! 🌟
