

Building Blocks of the Web: Creating Your First React Student Dashboard

Have you ever wondered...

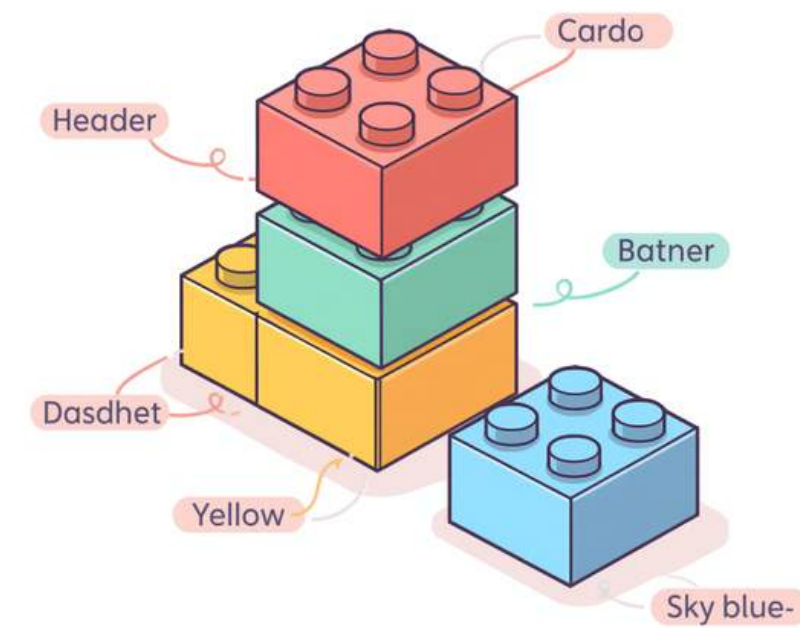

How do websites show your report cards or cricket scores? Websites are built from blocks called components – just like Lego bricks stacked together to make something amazing!

What is React?

React is a tool that helps us build websites using tiny building blocks called components. JSX looks like HTML but lets us write components easily – like writing a name tag for each block!

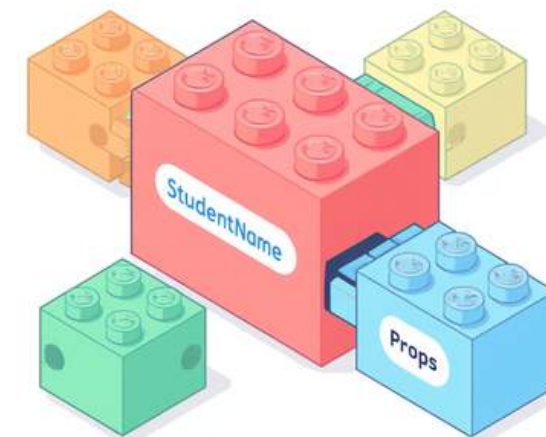

Functional Components

Functional components are small reusable parts that show something on screen!

"We tell components what to show using props – like passing your name to your report card!"

```
function StudentName(props) {  
  return {props.name};  
}
```

Props – Passing Information to Components

Props are like tiffin boxes 🍱
Each box holds something different!

- name="Aarav"
- grade="5"
- house="Agni"

We pass props to components just like handing a tiffin box to a friend – each box has different snacks inside!

ReportCard component with props:
Change the values to see YOUR own report card appear on screen! 🎉

Live Coding Activity!

Build your Student Dashboard!
function StudentCard(props) {
 return (

```
{props.name}  
Grade: {props.grade}  
House: {props.house}  
  
);  
}
```

Try changing the props to see your own dashboard details appear!

React at Your School

01

Digital Notice Boards
Schools use React to display live announcements and event updates on digital screens.

02

Online Report Cards
Students can view their marks and attendance anytime using React-powered school portals.

03

Cricket Scoreboards
Live match scores and player stats for school tournaments shown using React components.

04

House Leader boards
Agni, Trishul, Prithvi & Jal house points tracked and displayed with React dashboards.

Recap Quiz: What Did We Learn Today?

Q1: REACT COMPONENT?

- (a) A Lego brick ✓
- (b) A video game
- (c) A math problem

Q2: JSX LOOKS LIKE?

- (a) HTML ✓
- (b) Python
- (c) Music notes

Q3: WHAT ARE PROPS?

- (a) Info passed to components ✓
- (b) A cricket bat
- (c) A school subject

Q4: COMPONENTS ARE...?

- (a) Reusable building blocks ✓
- (b) Math equations
- (c) School timetables

Home Challenge!

Create your own student dashboard with your name, grade, and favourite school house! Use the props you learned today and try adding your favourite cricket score too!

Practice at home using CodeSandbox or StackBlitz – try changing props to see your own dashboard come to life. Happy coding!

Thank You!
Great job today! Keep building
your web blocks with React.
