

Space Code Academy

Your Mission: Build an Interactive Space Scene!

Namaste Explorers!

Welcome to your cosmic coding adventure! Today, we are going to use three magical languages of the web—**HTML**, **CSS**, and **JavaScript**—to build a fully interactive cosmic workspace. Let's see how they work together to bring our web page to life!

HTML

The **Structure**. It builds the skeleton of your spaceship scene!

CSS

The **Style**. It adds beautiful nebula colors and twinkling stars!

JavaScript

The **Actions**. It makes your planet buttons respond when clicked!

HTML

Part 1: Your Spaceship Skeleton

HTML puts all the pieces on your web page. It places the main title heading, the clickable planet buttons, and the space where our fun facts will show up!

```
<h1>My Space Scene</h1>
<button id="mars">Mars</button>
<button id="jupiter">Jupiter</button>
<div id="facts-panel"></div>
```

Code-Along Task:

Type the HTML code block above into your code editor. This will create a big main heading and two interactive planet buttons for Mars and Jupiter!

Part 2: Twinkling Stars & Nebula Colors

CSS makes your space scene beautiful! It changes the plain white background into a deep space purple sky and makes the stars sparkle using loop animations.

```
body {  
  background: #1a1145;  
}  
  
.star {  
  animation: twinkle 2s infinite;  
}  
  
@keyframes twinkle {  
  0%, 100% { opacity: 1; }  
  50% { opacity: 0.3; }  
}
```

Code-Along Task:

Add this CSS styling to your style file. This turns your workspace dark like deep space and programs your stars to twinkle forever!

Part 3: JavaScript Planet Buttons!

JavaScript makes things happen when you interact with the page. We will program our buttons so that they listen for a click and then reveal secret space telemetry!

```
document.getElementById("mars")  
  .addEventListener("click", function() {  
    document.getElementById("facts-panel")  
      .textContent = "Mars is the Red Planet!";  
  });
```

Code-Along Task:

Add a click event listener to each planet button. Program it so that when a kid clicks it, a fun fact instantly populates the facts panel!

Fun Space Telemetry & Recap

Fun Space Fact:

Jupiter is absolutely enormous! Did you know that it is so big that 1,300 Earths could fit completely inside it? That's a huge cosmic neighborhood!

Quick Quiz - Match the Language!

Draw a line or check the boxes to match each coding language to its cosmic role:

- ☐ **HTML** = Structure  (The spaceship skeleton that holds buttons and text)

- ☐ **CSS** = Style  (Colours, deep backgrounds, and beautiful twinkling animations)

- ☐ **JavaScript** = Actions  (Clicks, events, and interactive panel updates)

Mission Complete! You are now an official Space Code Explorer! Keep exploring, keep coding, and share your amazing space creations!
