

EARTHQUAKE- PROOF

BUILDING CHALLENGE!

LET'S LEARN HOW TO BUILD STRONG TOWERS!

STEM SESSION

WHAT HAPPENS DURING AN EARTHQUAKE?

Earthquakes make the ground shake with waves called seismic waves! These waves travel through the Earth like ripples in a pond. When they reach the surface, they make everything move and shake. That's why buildings need to be strong enough to handle these shaking waves!

EARTHQUAKE-PROOF BUILDING CHALLENGE!

HOW DO WE BUILD TO STAY SAFE?

> 3 KEY PRINCIPLES

Triangles keep buildings strong and steady! X-shaped supports stop buildings from wobbling. A wide base helps towers stand tall and resist shaking.

AMAZING INDIAN EARTHQUAKE-PROOF BUILDINGS

Kath-Kuni Architecture: Traditional wooden stone buildings from Himachal Pradesh use flexible joints that sway instead of breaking during earthquakes!

Bhuj Reconstruction: After the 2001 earthquake, engineers rebuilt using base isolation and cross-bracing to create safer homes.

OF LOCAL WISDOM

LET'S BUILD OUR OWN TOWER!

BUILD TIME!

Get ready to become a structural engineer! Follow these exciting steps to build your own earthquake-proof tower. Work with a partner and have fun!

BUILD A STRONG BASE FIRST

USE TRIANGLES AND CROSS-BRACING

EARTHQUAKE-PROOF BUILDING CHALLENGE!

SHOW OFF!

Great job! Your towers are strong and ready for earthquakes! Now share your amazing designs with your classmates. See whose tower is the sturdiest. Discuss what made your tower special!

TAMIZH

THANK YOU!
