

Building Your First Full-Stack Mini App!

Let's become app builders like Swiggy and Haldiram's! Get ready to create something amazing!

Did You Know?

Raise your hand if you've used Swiggy or YouTube! Behind every app are thousands of lines of code. But it all starts with ONE idea. Today, YOU will build your own mini app!

What is Full-Stack?

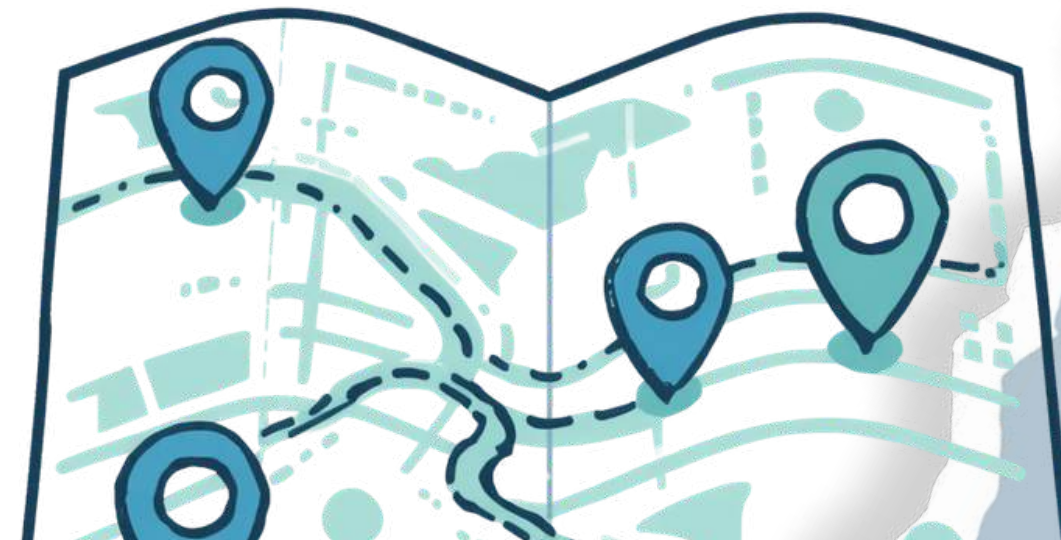

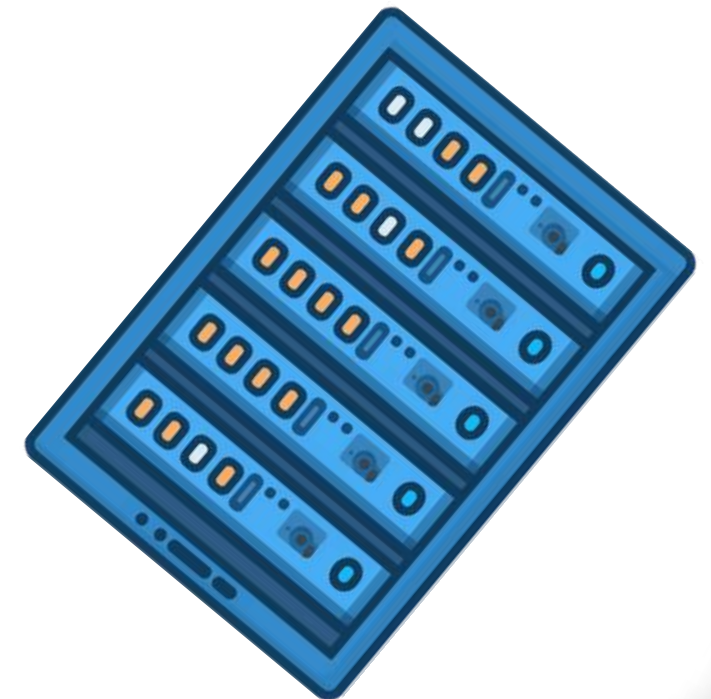

Full-Stack means two parts working together!
Front-End is what you see and click on your screen. Back-End is the magic that works behind the scenes to make everything happen!

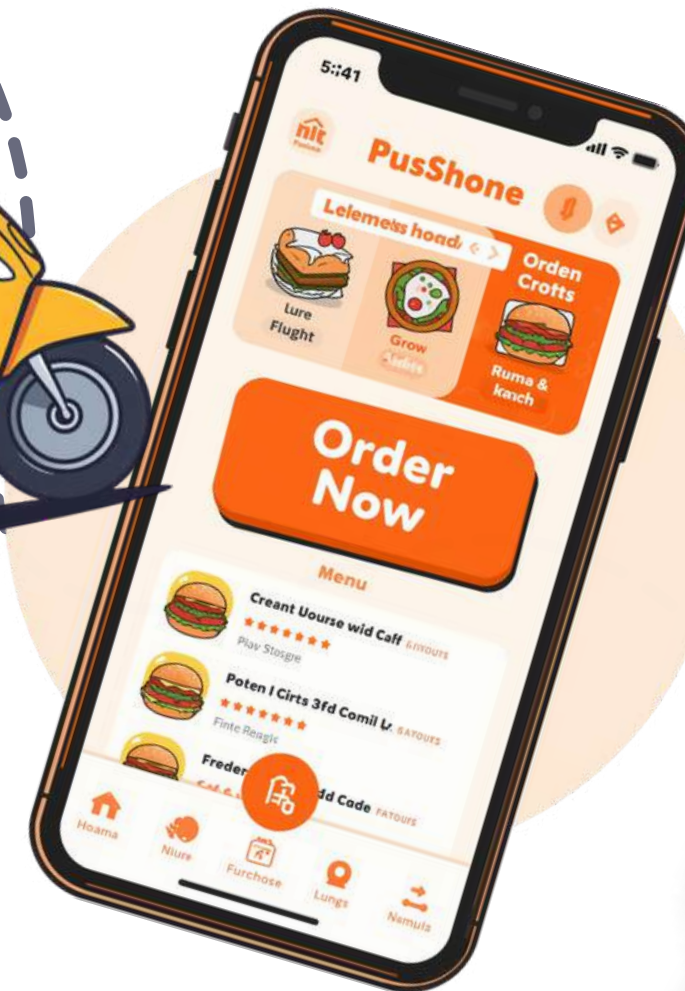

Dabbawalas Delivering with Code

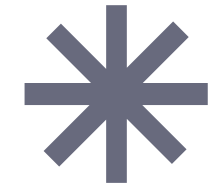

The dabbawala app shows you your lunch box arriving (front-end) but also tracks it in the kitchen and hubs (back-end).

Swiggy's Front and Back

The 'Order Now' button is front-end - what you see and tap! Saving your address is back-end - working behind the scenes to remember you.

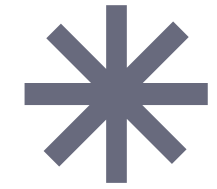

Quiz Time!

The 'Order Now' button on Swiggy is part of the _____?

✓ Front-End (Correct!)

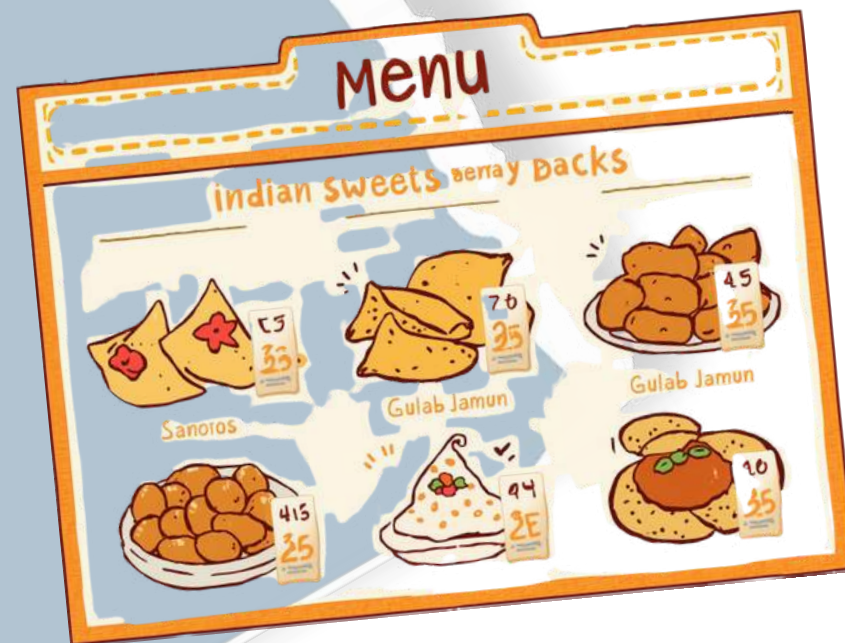

✗ Back-End

Haldiram's Menu and Kitchen

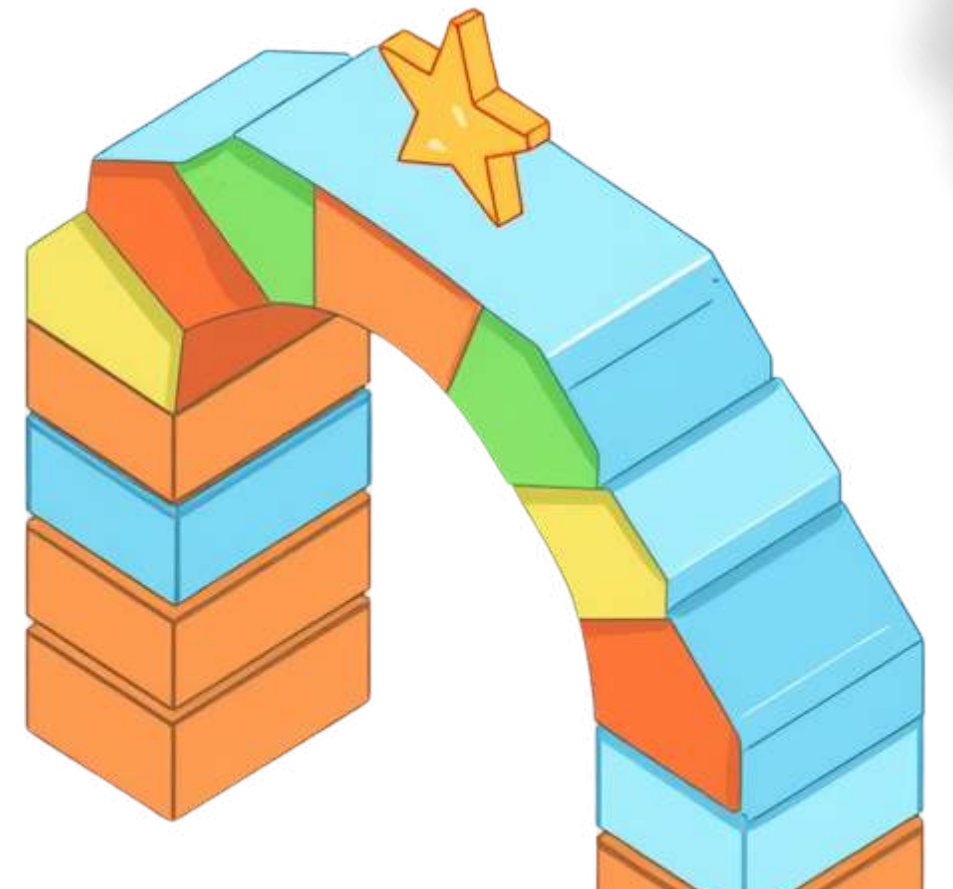

You see the menu (front-end), but food is made behind the scenes (back-end).

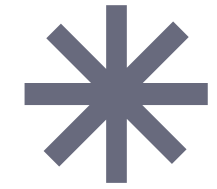

Mini Apps Are Like Chai Stalls

Mini apps do one thing perfectly — like a Tea stall makes great Tea ! Your Capstone is your final project where you use all your skills to build something amazing!

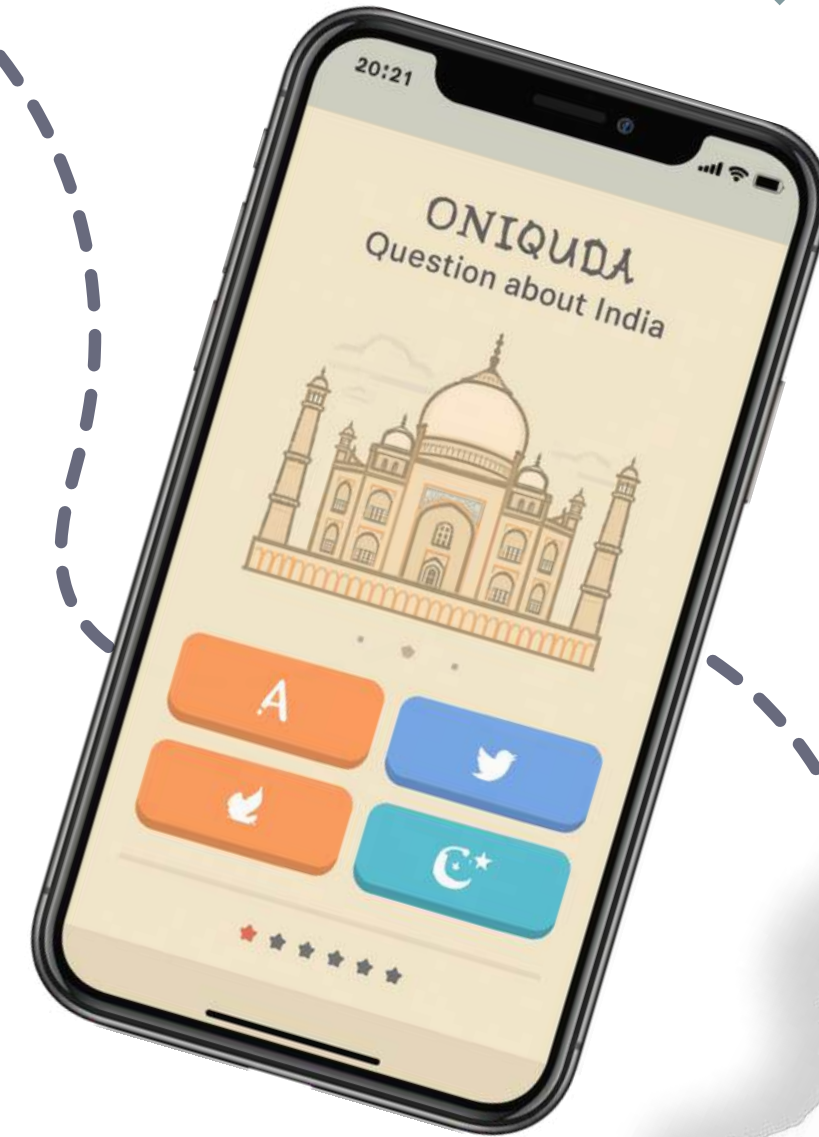

Mission Briefing: Choose Your App!

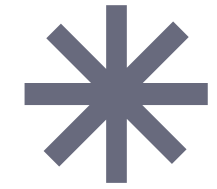

Pick your adventure! A) India Quiz App B)
Family Recipe Book C) Class Birthday
Reminder D) Your Own Idea!

India Quiz App Example

Test your knowledge about India! Answer fun questions about capitals, cricket stars, and famous places. See your score grow with every correct answer!

Recipe Book App Example

Add recipe names and ingredients, then see
your saved recipes. Your own family cookbook
in an app!

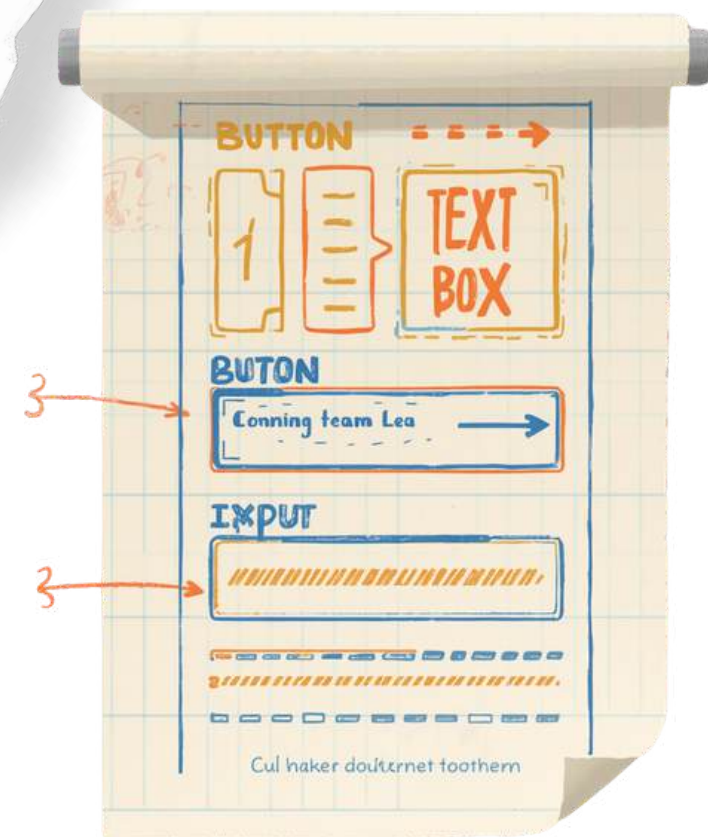

Birthday Reminder App Example

Enter classmate names and birthdays, see
upcoming celebrations! Never forget a friend's
special day with your own reminder app!

Your App Naksha (Blueprint)

Now you will plan your app! Follow these steps: Choose your app, Write your user story, Name your app, Draw your wireframe. Think like an architect before you build!

Writing Your User Story

"I am Priya, a Grade 4 student. I want a quiz app testing state capitals. So that I can score better in Geography exams!"

Front-End or Back-End?

Label your wireframe parts: Which are front-end? Which are back-end? Color them orange and blue!

Share and Celebrate!

Share your app name and idea with friends! You've unlocked the "App Architect Level 1" badge! You're becoming real app builders!

Homework and Next Session Preview

Show your app naksha to a family member and ask: "Would you use this? What would you change?" Write one sentence of feedback. Next time, we start building the front-end in HTML!

Thank You, App Builders!

You are now an App Builder! See you in next
Session. Keep imagining and creating!
