SPARK & HOOK!

SNACKDART APP REVIEWS

Arjun ordered food on SnackDart and read the reviews before choosing...

★ "Samosa was tasty!" 😊 → POSITIVE

☹️ "Dosa was cold :(" → NEGATIVE

😐 "Idli was okay." → NEUTRAL

Can a computer learn to understand these feelings too?

WHAT IS SENTIMENT ANALYSIS?

> KEY CONCEPT

Teaching computers to understand if words are happy, sad, or neutral!

😊 Positive: "The samosa was delicious!" (+1)

😐 Neutral: "The food arrived on time."

😞 Negative: "The dosa was cold and soggy!" (-1)

Even Alexa understands Hinglish! IPL fans, food delivery apps — all use sentiment analysis to understand YOUR feelings.

EMOTION SCORE GAME!

"Paneer butter masala was tasty" → Score: +1 😊
Happy words get a PLUS one point!

"Naan was burnt" → Score: -1 😞 Sad words get
a MINUS one point!

+1 / -1
SCORING!

WORD SCORES!

Computers use lists of positive and negative words to score a sentence. Each word gets a +1 or -1 value. The total score tells us the feeling!

☑ **POSITIVE:** "SUPERB", "MASTO", "AMAZING" → +1

☑ **NEGATIVE:** "BAKWAS", "BORING", "BAD" → -1

TEXT NORMALIZATION

Computers read text differently than us! We use `.lower()` to make all letters small, and `.split()` to break text into words.

```
user_input = "Paneer Butter Masala"
```

```
user_input = user_input.lower()
```

```
words = user_input.split()
```

"Paneer Butter Masala" → "paneer butter masala" →

```
["paneer", "butter", "masala"]
```

This helps the computer match words correctly in our word lists!

SENTIMENT ANALYSER FLOWCHART

Follow the steps a computer takes to analyse a review:
Input Review → Lowercase → Split into Words → Loop
through Words → Check Polarity → Calculate Score →
Display Result

FLOWCHART

Source: AI-generated data. Replace or verify before use.

STEP 1: SETUP

WORD LISTS

GUIDED LIVE CODING — BUILD A SENTIMENT ANALYSER

```
positive_words = ["superb", "masto", "tasty", "amazing",  
"blockbuster", "great"]  
negative_words = ["bakwas", "boring", "bad", "cold", "burnt", "flop"]
```

We teach the computer which words are happy (+1) and which are sad (-1). Indian slang like "masto" (awesome) and "bakwas" (rubbish) help our analyser understand real reviews!

STEP 2: PROCESS INPUT & SCORE

GUIDED LIVE CODING

```
review = input("Enter your review: ")
review = review.lower()
words = review.split()
score = 0
for word in words:
    if word in positive_words:
        score += 1
    elif word in negative_words:
        score -= 1
```

We collect the review, make it lowercase, split it into words, then loop through each word — adding +1 for happy words and -1 for sad words!

STEP 3: DISPLAY SENTIMENT! 😊

SHOW THE RESULT WITH EMOJIS!

```
if score > 0:  
    print("Your review is POSITIVE 😊")  
elif score < 0:  
    print("Your review is NEGATIVE 😞")  
else:  
    print("Your review is NEUTRAL 😐")
```

Try it yourself! Type a sentence like "Samosa was tasty and superb!" — what emoji do you get? Now try "Naan was bakwas" — does the score change? 🚀

HANDS-ON CHALLENGE!

Your Task: Add Indian slang words to improve a movie review sentiment analyser!

Try this review: "This movie was a masto blockbuster!"

Can your analyser detect it as POSITIVE? 🎬

ADD SLANG WORDS TO YOUR WORD LISTS

RUN & TEST WITH YOUR OWN MOVIE REVIEW!

CUSTOMISE YOUR ANALYSER!

😊 Positive Words to Add:
Masto • Superb • Blockbuster
Try adding your own happy words too!

😞 Negative Words to Add:
Bakwas • Flop • Boring
Can you think of more sad words?

6+
SLANG WORDS

THANK YOU!
