

Perimeter of Irregular Shapes

The Boundary Walk

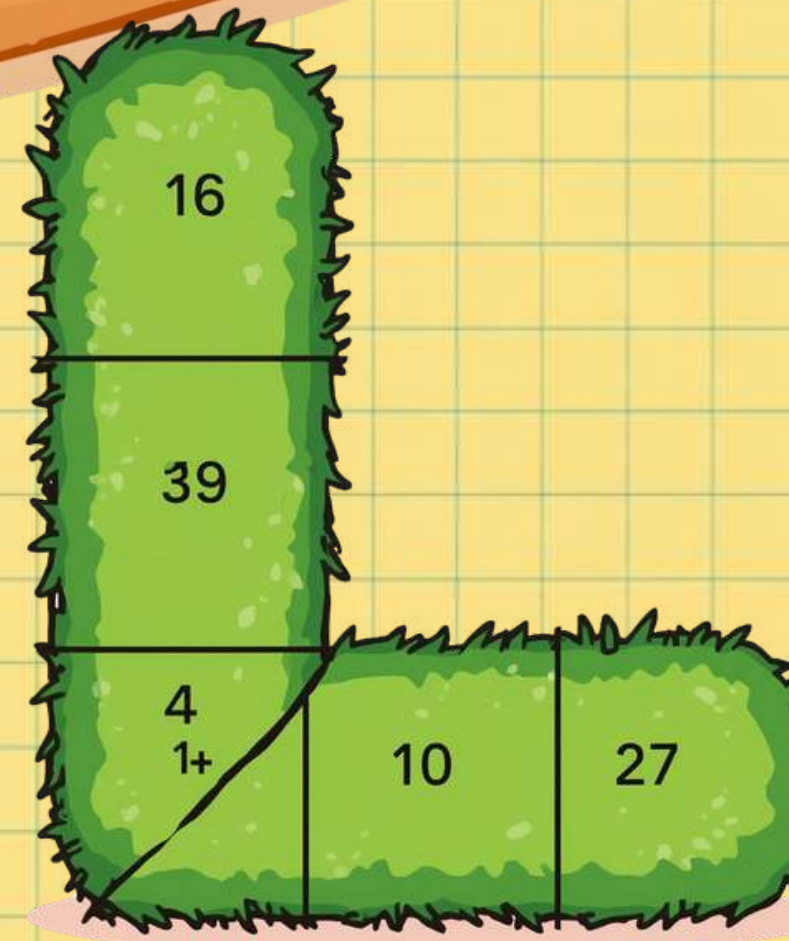

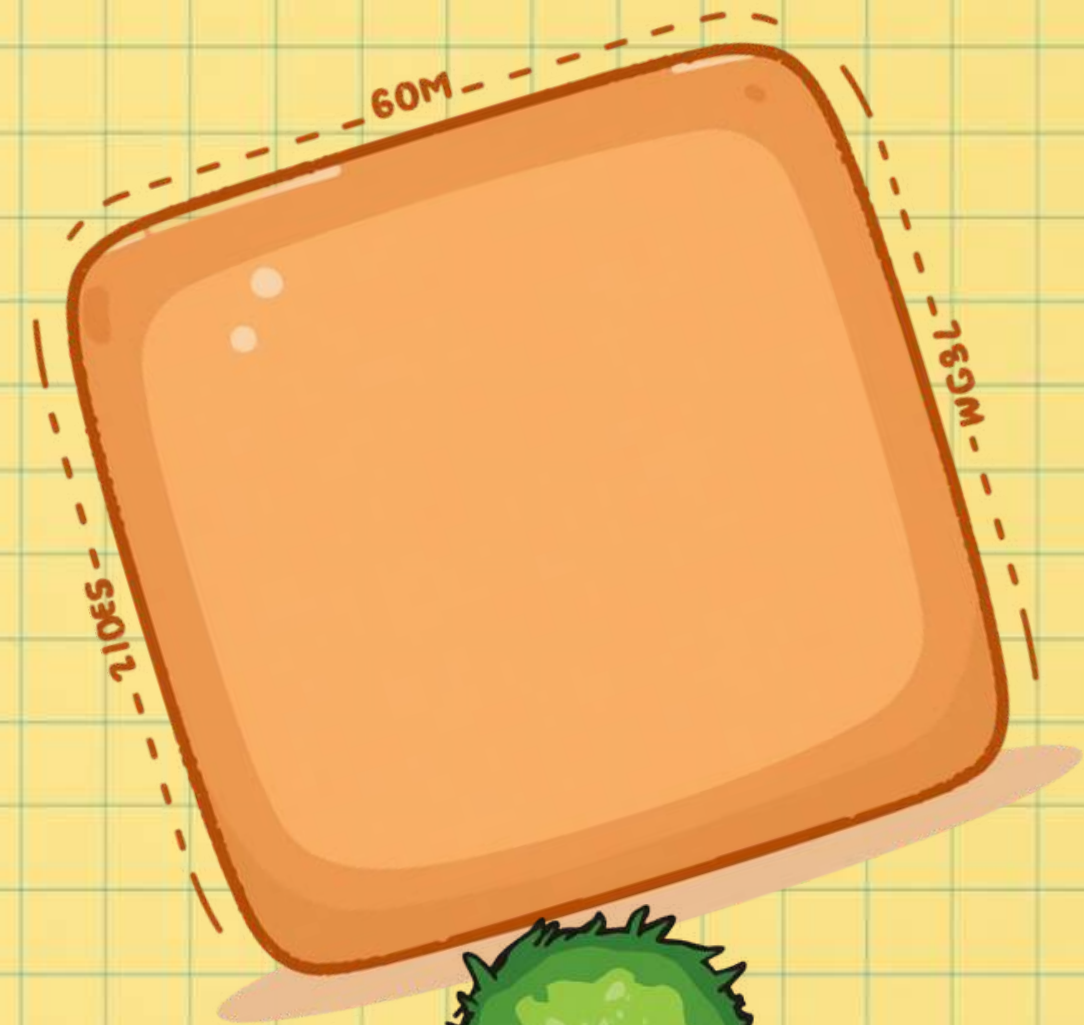

Kishan, the Rajasthan farmer, has an irregular khet with 5 sides. How long a fence does he need?
PERIMETER (puh-RIM-i-ter /) means the total distance around the outside boundary.
Imagine being a tiny ant walking all around the field!
Now trace your notebook cover with your finger!

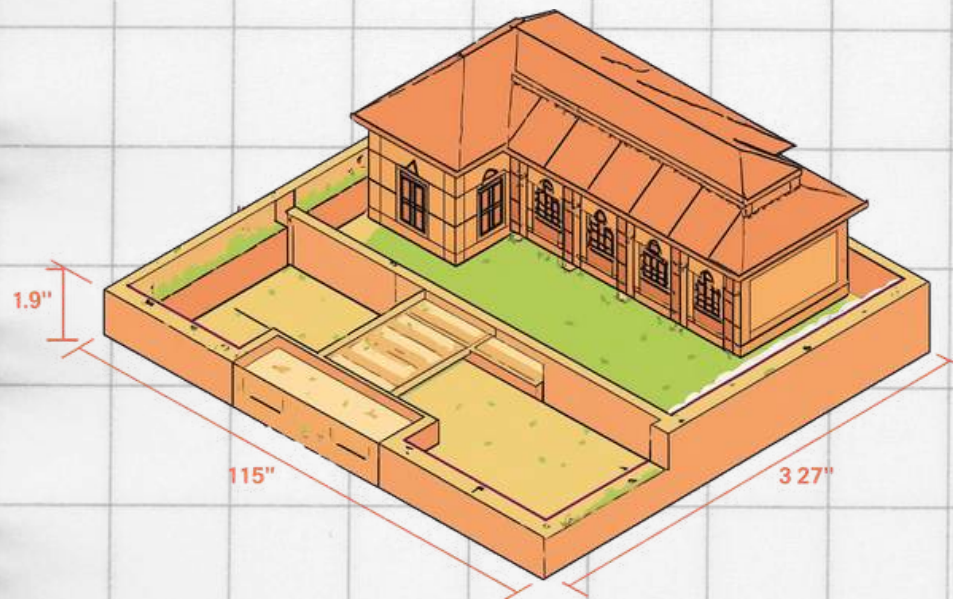

What Is an Irregular Shape?

Regular shapes have equal sides. Irregular shapes have different sides.
Regular • Irregular • Sides

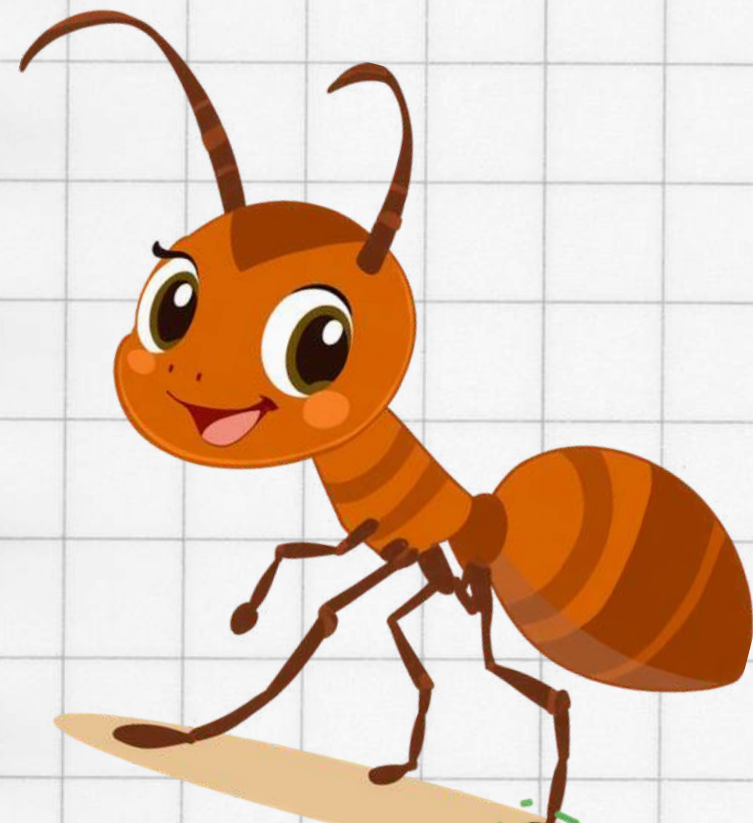

Irregular Shapes Around Us in India

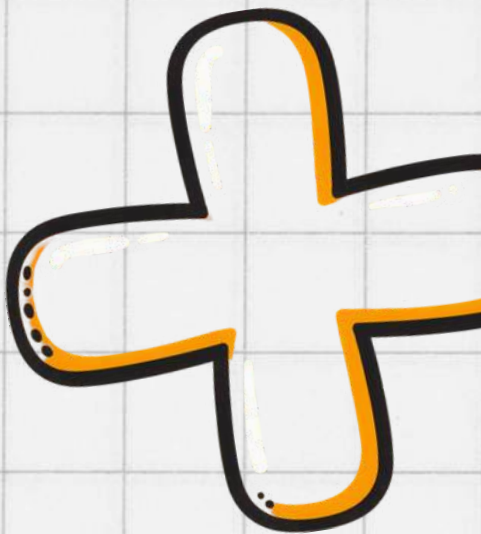

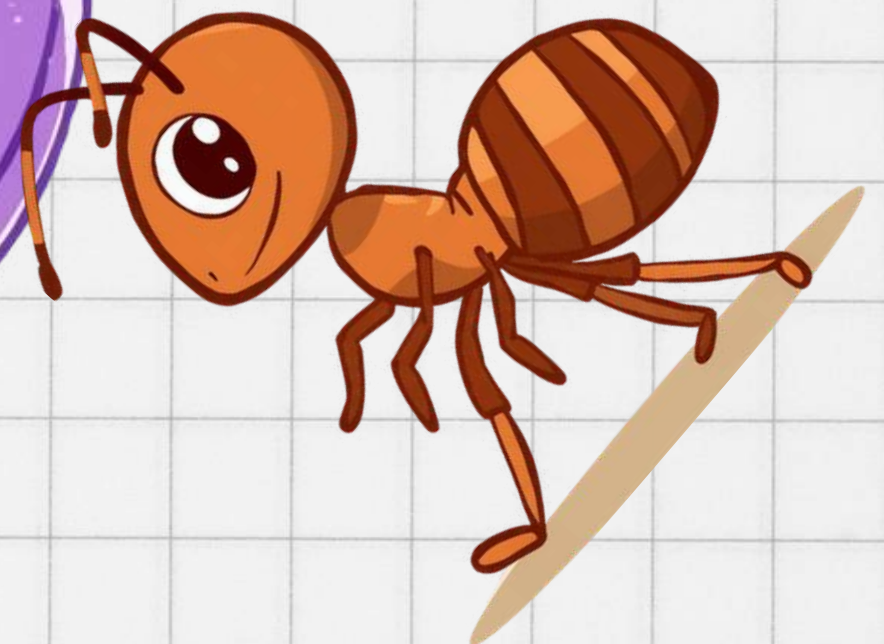

Most shapes we see every day are irregular!
Look around - khet fields, rangoli borders,
cricket grounds, L-shaped verandas, and city
plots all have different side lengths.

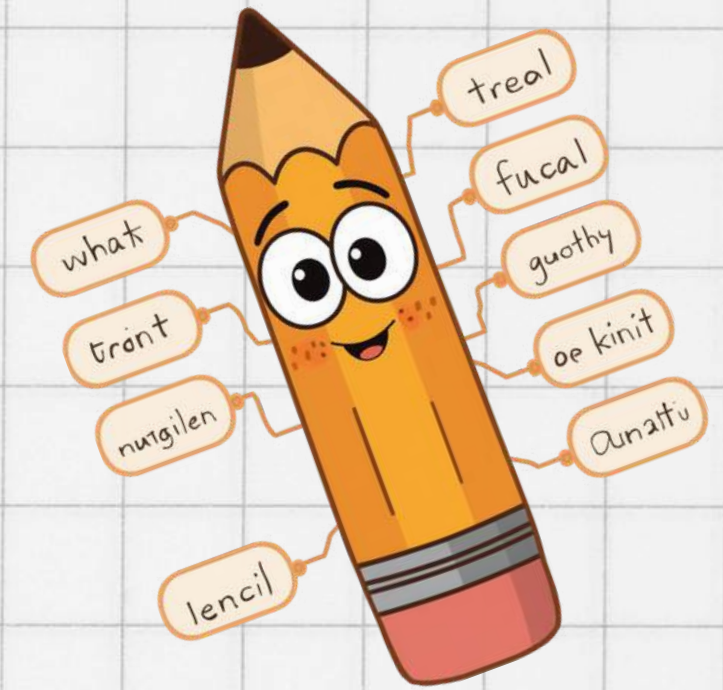

What Is Perimeter?

Perimeter is the total distance all around a shape. Imagine being a tiny ant walking along the boundary — the path you walk is the perimeter! Perimeter = Sum of all sides.

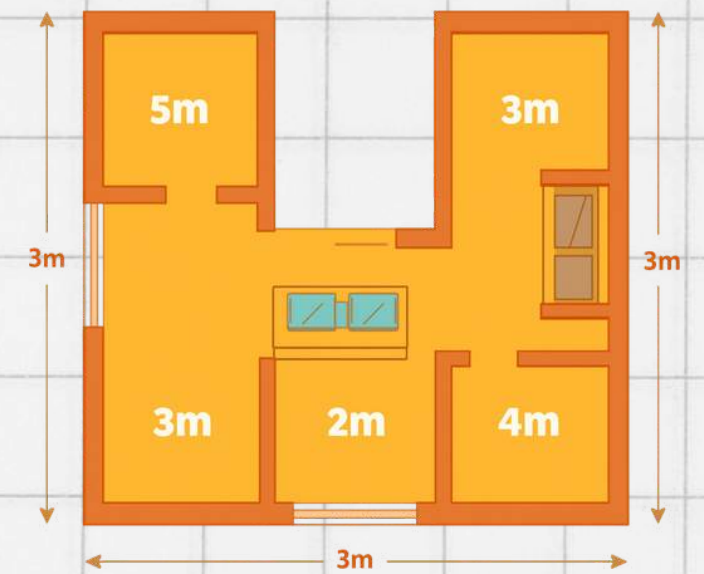

The 4-Step Method to Find Perimeter

Step 1: Label every side
Step 2: Write length of each side
Step 3: Add ALL side lengths
Step 4: Write answer with unit
GOLDEN RULE: Add all the sides!

Worked Example 1: L-Shaped Veranda

Let's add all sides together to find the perimeter!

$$5\text{m} + 3\text{m} + 2\text{m} + 1\text{m} + 3\text{m} + 4\text{m} = 18\text{m}$$

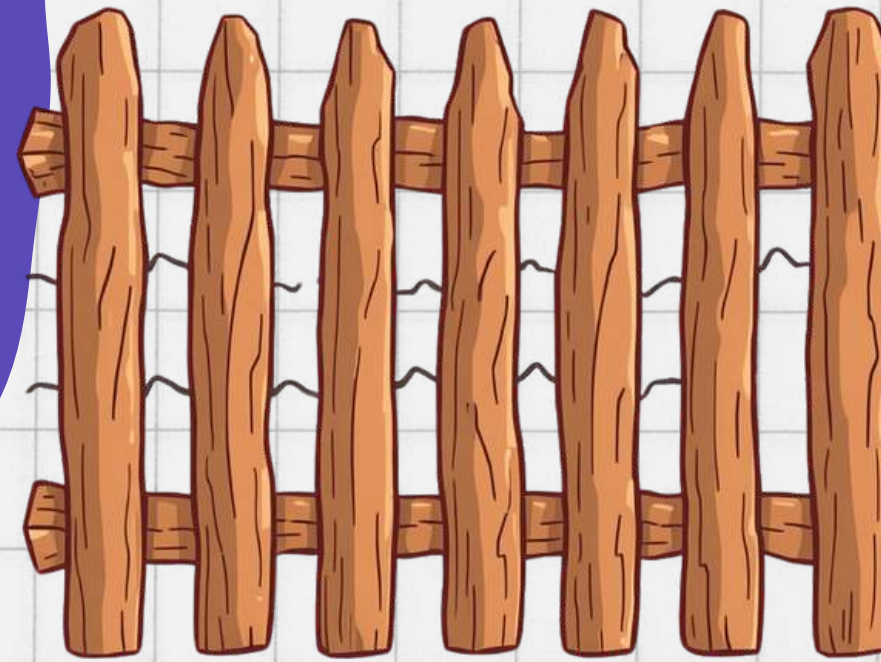

The perimeter of the veranda is 18 metres!

Worked Example 2: Kishan's Khet Field

Kishan needs to fence his irregular 5-sided khet field. Let's add all the sides together!
 $8\text{m} + 6\text{m} + 4\text{m} + 5\text{m} + 7\text{m} = 30\text{m}$
Kishan needs 30 metres of fence!

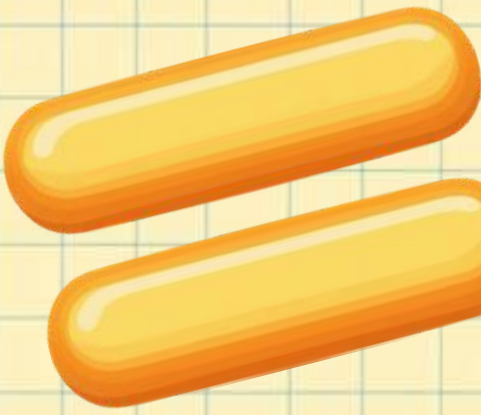

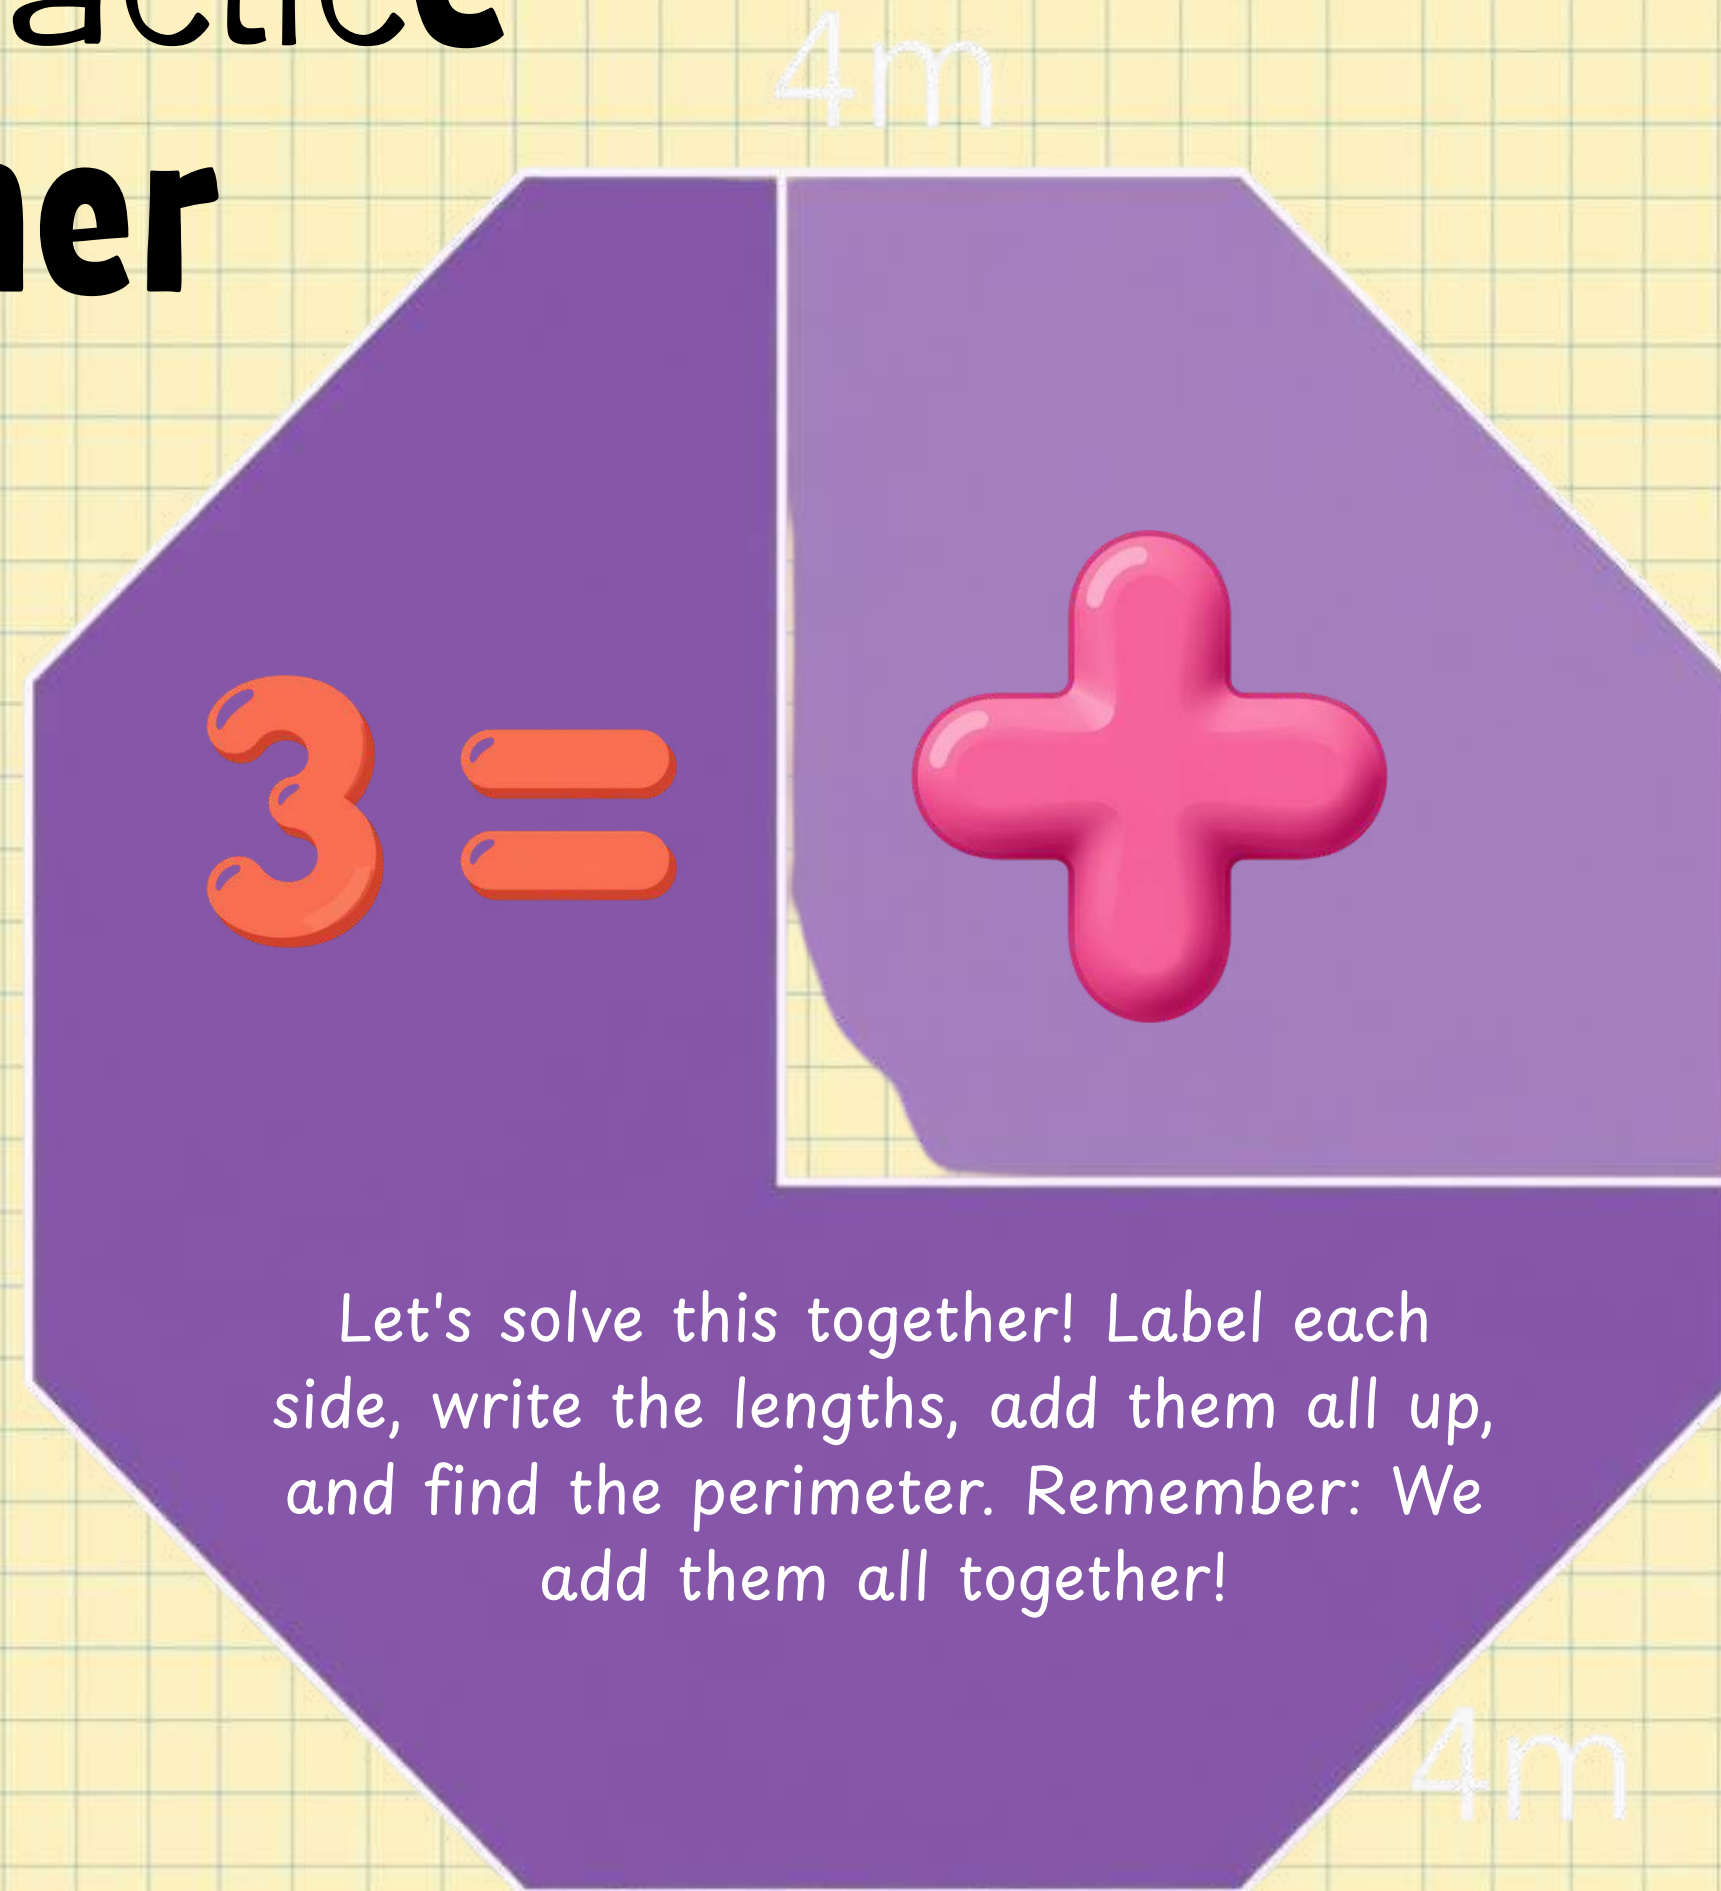

String Method Demonstration

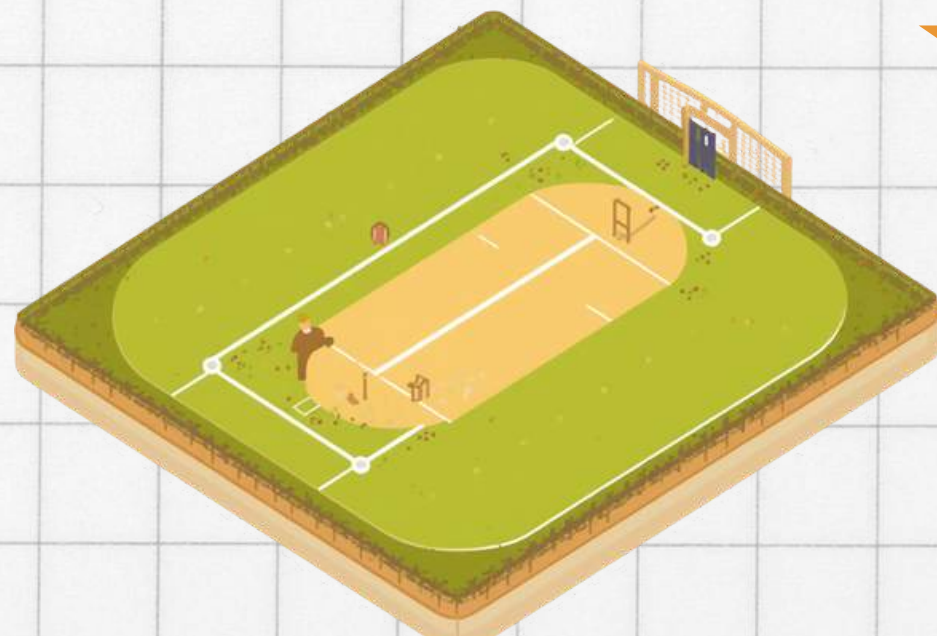

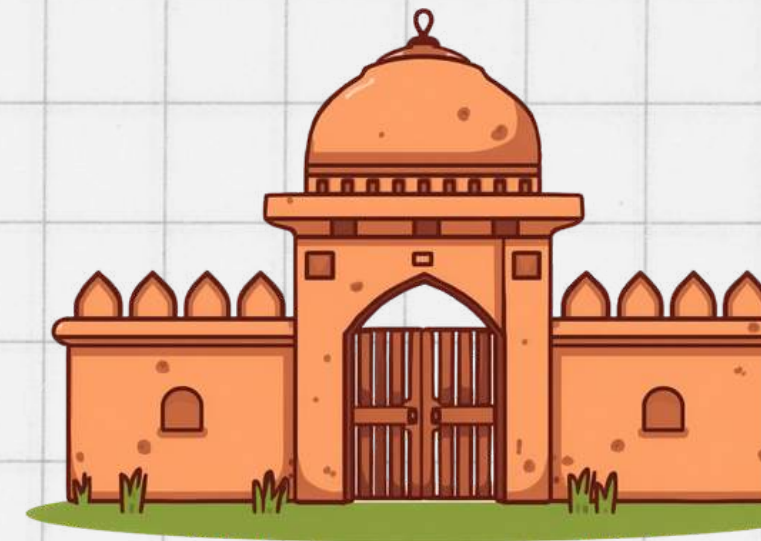

Place cotton thread along the boundary of any irregular shape. Cut the string where it meets the starting point. Now measure the string with a ruler - that's your perimeter! This is the easiest way to measure irregular shapes.

Guided Practice Together

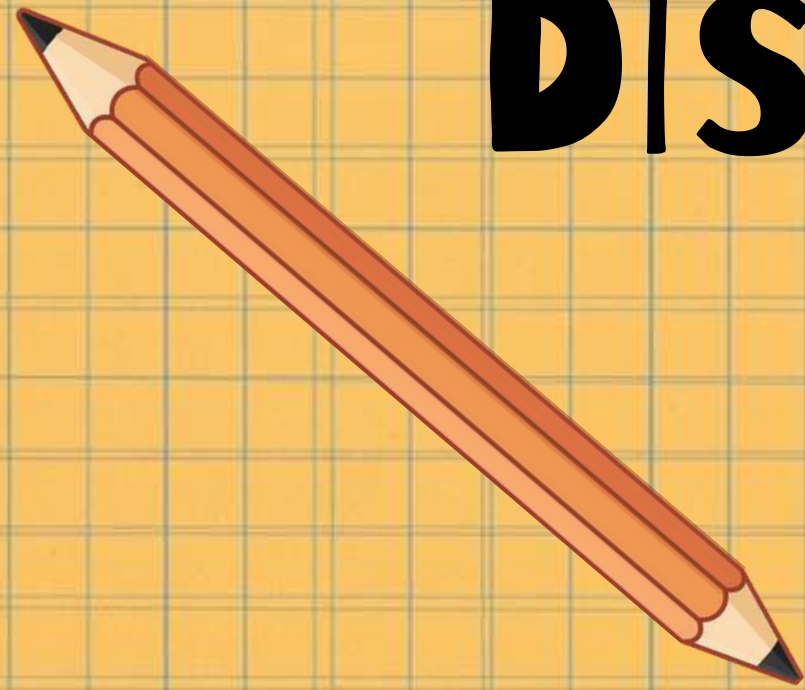

Where Do We See Perimeter in India?

Perimeter is everywhere in our daily lives! From the beautiful rangoli borders we draw during Diwali, to the chardiwari boundary walls around our home gardens, to the cricket ground outer boundary - we use perimeter all around us!

Discussion Questions

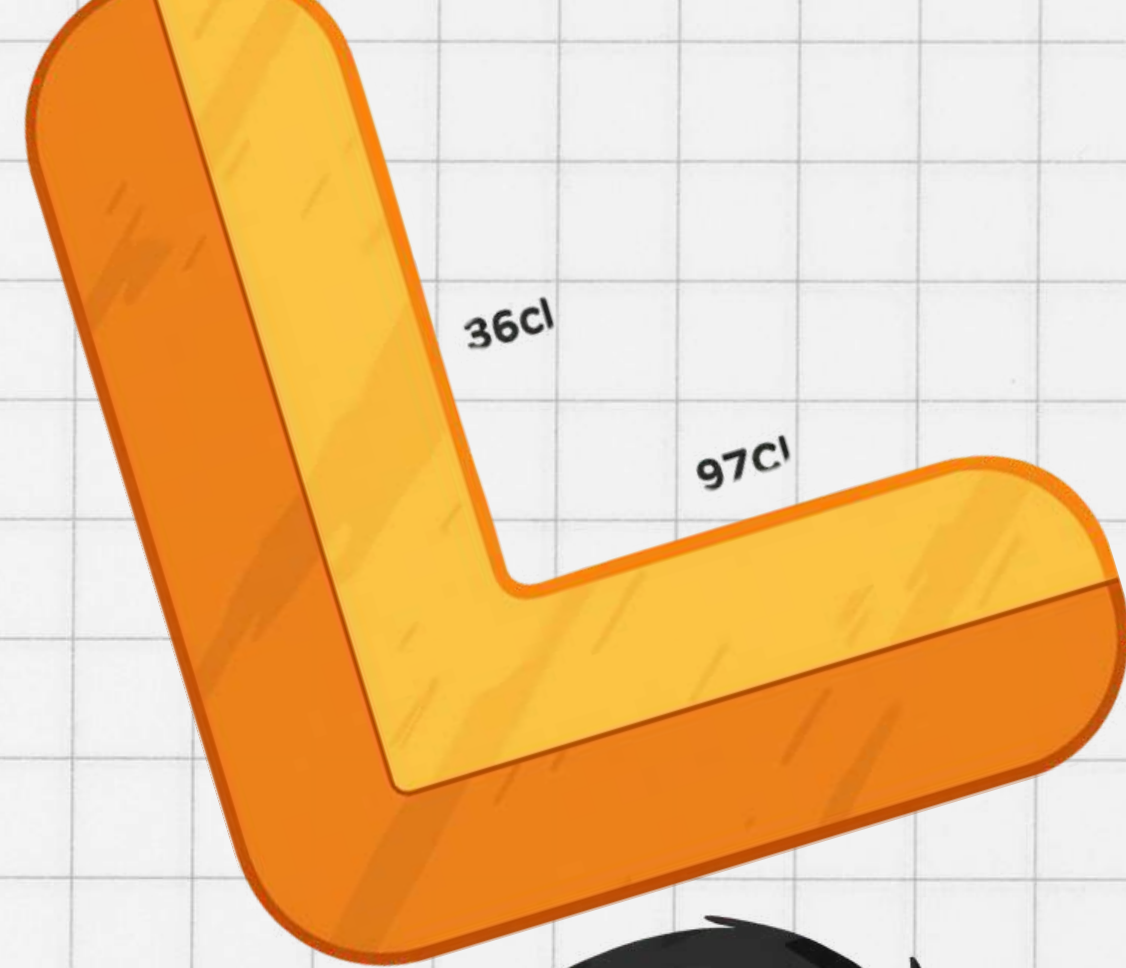

- Can you name other irregular shapes you see at home?
- Why do we need to know the perimeter of a field or garden?
- How does measuring with string help?

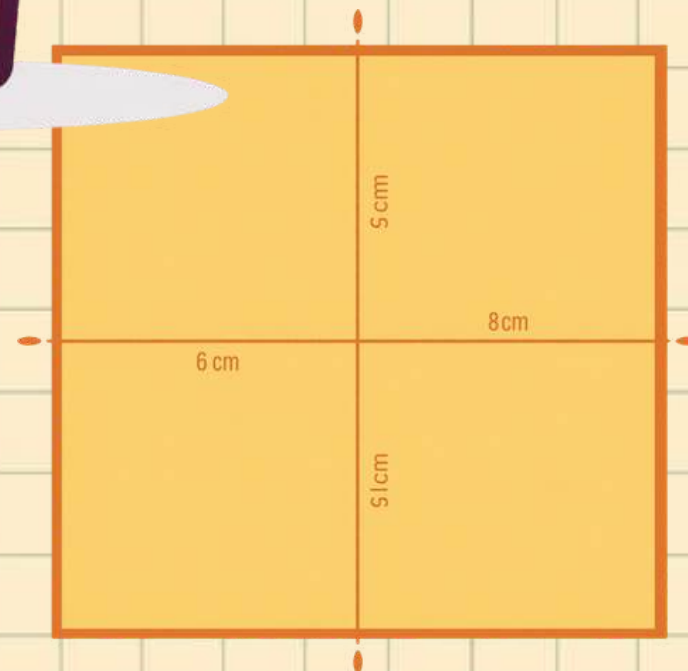

3 Big Things We Learned

1. Perimeter is the total distance around the outside of a shape.
2. Irregular shapes have sides of different lengths.
3. To find perimeter, add all side lengths carefully!

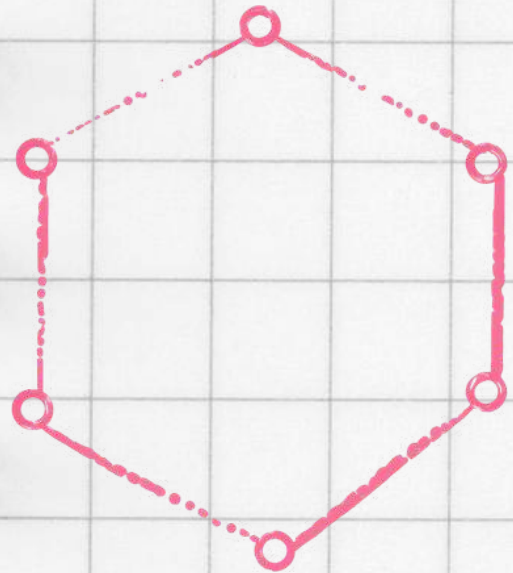

Exit Ticket: Find This Perimeter

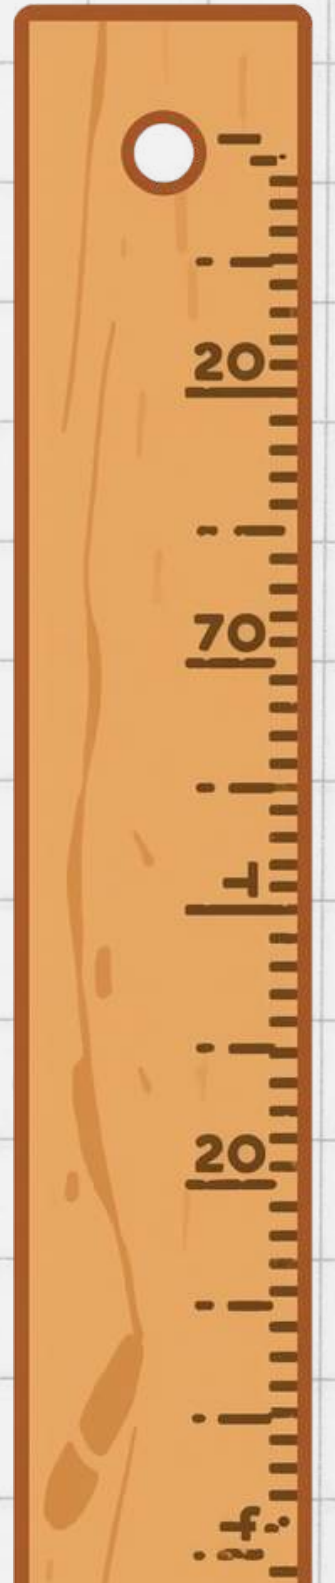

Look at the shape below! Add all four sides together: $6\text{ cm} + 4\text{ cm} + 8\text{ cm} + 5\text{ cm} = ?$
Write your answer with the unit (cm). Say it aloud or write it down!

Key Vocabulary

Perimeter - Total distance around a shape
Irregular Shape - A shape with sides of different lengths
Side - Each straight edge of a shape
Boundary - The outer edge or border
Centimetre (cm) & Metre (m) - Units to measure length
Add / Sum - Combine all numbers together

Take-Home Challenge

Find an irregular shape at home. Trace it, measure all sides with a ruler or string, add the lengths together, and tell us the perimeter next time! Happy measuring! Keep exploring perimeter!
