Soil Types - Feel & Compare

Fun EVS Adventure Book • Grade 2

Hi Little Scientist!

Today, we are going to look, touch, and learn about the magical world of
Mitti (Soil)!

Did you know that soil is not dirty? It is magic! Let's explore together!

Planrs Academy • Environmental Studies (EVS)

✨ Arjun's Diwali Story

Arjun's Dadi and the Diwali Diyas 🕯️

Arjun's Dadi (grandmother) wants to make beautiful clay lamps (diyas) for Diwali. She asks Arjun to get some special mitti from the riverbank. Arjun wonders: "Can we use any soil from the garden to make a diya?" Let's find out!

🤔 Let's Talk!

Before we start, think about these fun questions:

- 🌱 Have you ever touched soil or mud? What did it feel like?
- 🌱 Was it smooth, rough, or sticky? Where did you find it?

Our Soil Scientist Mission:

Not all soil is the same! Soil has different colors, textures, and uses. Today, we will use our hands and eyes to compare them!

What is Soil (Mitti)?

Soil is the loose, natural material found on the very top layer of our Earth. It is super important because:

- 🌱 **Plants grow in it:** It holds their roots and gives them food and water.
- 🌱 **Animals live in it:** Tiny bugs, earthworms, and ants call it home.
- 🌱 **Humans use it:** To grow food and build beautiful things!

Meet the Three Soil Friends!

In India, we can easily find **three main types** of soil. Let's see how they look and feel:

Sandy Soil

(Reti Wali Mitti)

Color: Light beige or yellow

Feel: Very rough and gritty (like sandpaper!)

Water: Drains water super fast!

Clumping: It falls apart and cannot make a ball.

Where to find: Juhu Beach, Marina Beach, or Thar Desert!

Clayey Soil

(Chikni Mitti)

Color: Red or dark grey

Feel: Smooth and very sticky when wet (like soft chapati dough!)

Water: Holds water for a long time.

Clumping: Forms a super firm ball easily!

Where to find: Pots made by a *Kumbhaar* (potter).

Loamy Soil

(Upjaau Mitti)

Color: Rich dark brown

Feel: Soft and crumbly (like a dry biscuit!)

Water: Holds just the right amount of water.

Clumping: Forms a soft clump that breaks gently.

Where to find: A green farm of a *Kisan* (farmer).

♪ *Let's Sing the Soil Chant!* ♪

*"Sandy feels rough,
Clay sticks like glue,
Loamy is the best — plants love it too!"*

Hands-On Fun: The Feel & Compare Tray!

Let's do a quick activity with 3 cups of soil samples labeled **Sandy**, **Clayey**, and **Loamy**:

What to do?	 Sandy	 Clayey	 Loamy
Look at the color	Light beige / yellow	Red / dark grey	Rich dark brown
Touch & rub it	Rough and gritty	Smooth and sticky	Soft and crumbly
Squeeze it in your hand	Falls apart quickly	Forms a firm ball	Forms a soft clump
Pour a few drops of water	Disappears instantly!	Sits on top or stays wet	Soaks in beautifully

Quick Quiz - Check Your Brain Power!

Q1: Which soil feels rough and gritty like beach sand?

Answer: Sandy Soil!

Q2: Which soil does a Kumbhaar (potter) use to make diyas and pots?

Answer: Clayey Soil!

Q3: Which soil is the favorite of a Kisan (farmer) for growing yummy crops?

Answer: Loamy Soil!

★ **Remember: Mitti is NOT dirty, it is MAGICAL! Always wash your hands with soap after touching soil!** ★
