

DECIMALS — ADDITION & SUBTRACTION

What Are Decimals?

Decimals are numbers with parts smaller than one.

- Look at the number line: 0, 0.1, 0.2, 0.3... all the way to 1!
- The dot in the middle is called a decimal point.
- Decimals help us show amounts between whole numbers.

Let's Explore!

Understanding Decimal Place Value

3.25

Ones . Tenths Hundredths

3 . 2 5

Why Do We Use Decimals?

★
★
 Money — ₹25.50

 Length — 1.5
meters

 Time — 9.8
seconds

★

Let's Review Addition!

★

$$23 + 15 = 38$$

We add numbers by putting them
together to find the total!

●

Adding Decimals — Step 1

$$\begin{array}{r} 1.40 \\ 2.75 \\ \hline \end{array}$$

Always line up the decimal points before adding!
This keeps tenths under tenths and hundredths
under hundredths.

★

Adding Decimals — Step 2: Add Tenths and Hundredths

★

$$1.40 + 2.75$$

$$0 + 5 = 5 \text{ (hundredths)}$$

$$4 + 7 = 11 \text{ (tenths)} \rightarrow \text{carry}$$

1

Answer: $1.40 + 2.75 = 4.15$ ✓

Adding Decimals — Worked Example 1

$$3.25 + 4.60 = 7.85$$

Step 1: $5 + 0 = 5$ (hundredths)

Step 2: $2 + 6 = 8$ (tenths)

Step 3: $3 + 4 = 7$ (ones)

Answer: 7.85 ✓

Adding Decimals — Worked Example 2

$$5.75 + 2.85 = 8.60$$

Step 1: $5 + 5 = 10$ (carry 1)

Step 2: $7 + 8 + 1 = 16$ (carry 1)

Step 3: $5 + 2 + 1 = 8$

Answer: 8.60 ✓

Addition Practice Time!

$$\begin{aligned}2.3 + 1.45 &= ? \\4.6 + 3.2 &= ? \\0.75 + 0.25 &= ? \\6.1 + 2.9 &= ?\end{aligned}$$

Remember: Line up the decimal points!
Try solving these in your notebook. You can do it!

Let's Review Subtraction!

$$25 - 12 =$$

Subtraction means taking away to find what is left.

$$25 - 12 = 13 \checkmark$$

Now let's try with decimals!

Subtracting Decimals — Step 1

$$\begin{array}{r} 4.50 \\ - 2.35 \\ \hline \end{array}$$

Line up the decimal points before
subtracting!

$$4.50 - 2.35 = ?$$

Subtract each column carefully.

$$\begin{array}{r} 2. \\ 1 + 5 \\ 3 + 3 \end{array}$$

Subtracting Decimals — Worked Example 1

$$6.4 - 3.25 =$$

Step 1: $0 - 5 \rightarrow$ borrow! $10 - 5 = 5$

Step 2: $3 - 2 = 1$ (tenths)

Step 3: $6 - 3 = 3$ (ones)

Answer: $3.15 \checkmark$

Worked Example 2

$$7.85 - 4.6 =$$

Subtraction Practice Time!

$$5.5 - 2.25 =$$

$$8.3 - 3.1 =$$

$$4.75 - 1.5 =$$

$$6.9 - 4.4 =$$

Tips to Remember

1. Always line up the decimal points
1. Add or subtract digits in each place value carefully
1. Don't forget to bring down the decimal point in your answer

Your Teacher

Summary — What We Learned Today

- Decimals are numbers with parts less than one
 - Always align decimal points for addition and subtraction
- Add or subtract digits in each place value carefully
- Practice makes perfect — keep trying!

You Can Do It!

Math is fun when you try
your best!

Thank You! Any Questions?
