

CODING YOUR CHOICE: BUILDING A SECRET CAVE ADVENTURE WITH IF-ELSE

THE LOST KEY OF AJANTA CAVES

STORY LAUNCH – MEET OUR ADVENTURERS!

Ananya and her tech-savvy cousin Kabir explore hidden garden ruins near an old fort. They find a heavy iron door with two mysterious symbols. Kabir's superpower: Build a magical text gateway using Python code!

STORY CROSSROADS

If-Else is like a fork in the road! When you reach a crossroads, you must choose which way to go. Your code does the same thing - it makes decisions based on what happens.

IF-ELSE IN ACTION

Indian Example: If the left path is clear, walk to the waterfall. Else, take the right path to the historic temple!

CONCEPT B — ASKING PLAYER QUESTIONS

THE INPUT() FUNCTION

input() is like a box that waits for your answer! Just like a railway kiosk asks for your coach number, or a fruit vendor asks "Alphonso or Dasherri mangoes?"

TRY THIS CODE SNIPPET!

```
input("Which mango do you choose? ")
```

The computer waits patiently for you to type your answer!

CONCEPT C — PRINTING THE LANDSCAPE: PRINT() TEXT ENGINE

`print()` is like a megaphone that shows messages on your screen!

Just like bus destination boards on BEST, DTC, and MTC buses display stops for passengers, `print()` displays your story text for players to read.

Code snippet:

```
print("Welcome to the secret cave!")
```

The `print()` command is your storytelling megaphone – it shows your adventure world to players!

LIVE CODE-TO- CONSOLE DEMO

Code Editor:

```
print("Welcome!")  
answer = input("Left or right?")  
if answer == "left":
```

Console Output:

```
"You see a dark cave entrance!"  
Waiting for your choice...
```

```
1 ocract  
2  
3 pleete-filiea  
3     ticks -oos()p.apm)  
4     teae(escioml?);  
5 frent.omp,,print ("k;  
6     L:  
7     (tioks <innt)  
8     tlinskey -ncle:10(9)  
10     pech.tiop  
10
```

```
#finptr,output  
{  
    mrnt.thrst.opril: {  
    }  
    ../looket,,prir=r  
    besidatce/>  
}
```

THE HIDDEN TREASURE ROOM CHALLENGE

MISSING COLON

Oops! Remember the colon :
at the end of your if line. It tells
Python a choice is coming!

WRONG INDENTATION

Indentation matters! It helps Python
follow your story paths correctly.

PERFECT CODE!

Great job! Your code runs
perfectly. The treasure room
opens!

QUICK QUIZ TIME!

QUESTION 1

Which command lets the player type their answer?

- ☐ print()
- ☐ input()

QUESTION 2

What symbol ends an if line?

- ☐ colon :
- ☐ semicolon ;

QUESTION 3

Drag and drop to arrange in order:

print() → input() → if → else

RECAP — YOUR STORY CODE BUILDER

Let's remember the magic tools we learned today to create amazing text adventures!

HOME QUEST — CREATE YOUR DINNER STORY FLOWCHART

Draw a flowchart for dinner choices at home! Use if-else logic to tell your story.

Example: "IF Mummy cooks paneer, eat 3 rotis!

ELSE eat 2 bowls dal rice!"

Get creative and share your flowchart with family!

VISUAL PATH REASONING

Think of if-else like a fork in the road!
When you reach a crossroad, you must
choose one path. The computer checks
your answer and picks the matching
path for your adventure.

HOW IF-ELSE WORKS

IF you choose the auto-rickshaw, zoom to the market! ELSE
pick mangoes and walk to the garden. Your choice decides
the story!

THANK YOU &
QUESTIONS!
