

GIT & GITHUB

**VERSION CONTROL
FUNDAMENTALS**

THE "OOPS!" MOMENT

Lost Files? We've All Been There!

Version Control Can Save the Day

Have you ever lost your school project file? Imagine if you could go back in time to fix it! Let's explore how Version Control is like a Time Machine for our work.

THE PROBLEM WITH FILE VERSIONS

The Confusing File Name Chaos!

Ever seen files named "Final_Final_v2_REALLY_FINAL.doc"? It's confusing and messy! We can't tell which version is actually the latest one.

Why This Creates Big Problems

Hard to know which file is the newest version. Easy to accidentally delete or lose important changes we made earlier!

Code Explorers

WHAT IS VERSION CONTROL?

Your Digital Time Machine for Code!

Version Control lets us save and track every change we make. It saves snapshots called "Commits" — like bookmarks in your story!

Like a School Play Script — Go Back Anytime!

Just like keeping every version of your school play script, you can see what changed and when. Never lose your hard work again!

Code Explorers

GIT VS GITHUB – WHAT'S THE DIFFERENCE?

Git: Your Personal Notebook

Git is the tool you install on your computer. It saves all your code versions locally — like keeping a personal diary of every change you make!

GitHub: The National Library of India

GitHub is an online platform where you share your work with others. Think of it as India's biggest library where everyone can read and contribute to projects!

KEY TERMS TO KNOW

Repository

Your Digital Almirah or School Locker where all your project files are safely stored

Commit

A milestone snapshot with a note describing what you changed in your code

Push

Sharing your saved changes to GitHub so your friends and teachers can see them

Code Explorers India

INDIAN CONTEXT EXAMPLES

ISRO Scientists

Track software versions for rocket launches

School Locker

Safe storage for your projects

Code Explorer

You are a version control hero!

Human Git Activity

BECOME HUMAN GIT EXPLORERS!

Write Clear Commit Messages for Changes

Learn How Commits Track Your Progress

Pass a paper 'code' around the class and write Commit Messages for each change you make. This helps us understand how commits save our progress!

Code Explorers

COMMIT MESSAGE CHALLENGE

Bad Messages vs Good Messages

✗ Bad: "abc" → ✓ Good: "Added blue color to header"

✗ Bad: "fixed stuff" → ✓ Good: "Corrected spelling mistake in title"

Write Clear, Meaningful Commit Notes!

Remember: Your future self and teammates will thank you for clear commit messages! Think of them as helpful sticky notes.

Session 1 Recap

WHAT WE LEARNED TODAY

**Version Control = Digital
Time Machine**

**Git = Personal Tool on
Your Computer**

**GitHub = Online Sharing
Library**

**Commits Save
Milestones with Notes**

Human Git Practice!

Code Explorers Quiz

QUIZ TIME!

Ready, Code Explorers?

Let's test our knowledge with 3 quick questions!
Show what you've learned about Git, GitHub, and
version control. Think carefully and have fun!

QUIZ QUESTION 1

What is a Commit?

- A) A snapshot of changes with a note**
- B) A type of computer**
- C) A video game**

Think carefully about what we learned today. A commit is something special that helps us track our work!

Quiz Time!

QUIZ QUESTION 2

A) Play games B) Share and collaborate on code

C) Watch movies

Think carefully about what makes GitHub special. Remember our library analogy!

Quiz Time!

QUIZ QUESTION 3

If Git is your notebook, GitHub is like a...

A) National Library of India B) School Desk C) Video Game

Think about what we learned: Git is your personal notebook for saving versions.
So what would GitHub be like?

THANK YOU, CODE EXPLORERS!

You did amazing today! Keep practicing Git basics and don't be afraid to experiment. Remember, every great coder started exactly where you are now. Reach out anytime with questions!
