

Mean, Median & Mode

Let's Learn Together!

What Is Statistics?

Statistics helps us understand numbers better!

Mean, median, and mode are ways to find the "middle" or "average" of numbers.

Why Learn *Mean, Median & Mode*?

These math skills help us understand numbers in fun and useful ways every day!

To find average scores in games

To know popular choices among friends

To understand data in daily life

What Is Mean?

Mean is the average of numbers!

How to find it:

1. Add all the numbers together
2. Divide by how many numbers there are

Example: 3, 5, 7

Add: $3 + 5 + 7 = 15$

Divide by 3: $15 \div 3 = 5$

The mean is 5!

Mean Example

You have 2, 4, and 6 sweets. What is the mean?

Step 1: Add all numbers $\rightarrow 2 + 4 + 6 = 12$

Step 2: Divide by how many $\rightarrow 12 \div 3 = 4$

The mean is 4 sweets!

What Is Median?

Median is the middle number when numbers are arranged in order.

Example: 3, 5, 7 → The median is 5!

First arrange numbers from smallest to biggest, then find the one in the middle.

Median Example

Heights of 5 friends: 110cm, 115cm, 120cm, 125cm, 130cm

Arrange in order and find the middle!

The median height is 120cm (the middle number).

What Is Mode?

Mode is the number that appears most often in a group of numbers.

Example: 2, 2, 3, 4, 5

The mode is 2 because it appears twice!

Mode Example

Favorite colors of 7 kids: red, blue, red, green, red, blue, yellow

Mode is red because it appears 3 times — the most!

Mean vs Median vs Mode

Let's compare these three ways to understand numbers! Each one tells us something different about a group of numbers.

Mean: Add all numbers, then divide by how many

Median: The middle number when in order

Mode: The most frequent number in a group

Let's Practice! (Mean)

Find the mean for each set: ●

Numbers: 4, 6, 8 $\rightarrow$ Mean = ? ●

Numbers: 1, 3, 5, 7 $\rightarrow$ Mean = ? ●

Numbers: 2, 5, 8 $\rightarrow$ Mean = ? ●

Let's Practice! (Median)

Find the median for each set: ●

Numbers: 5, 9, 2 $\rightarrow$ Median = ? ●

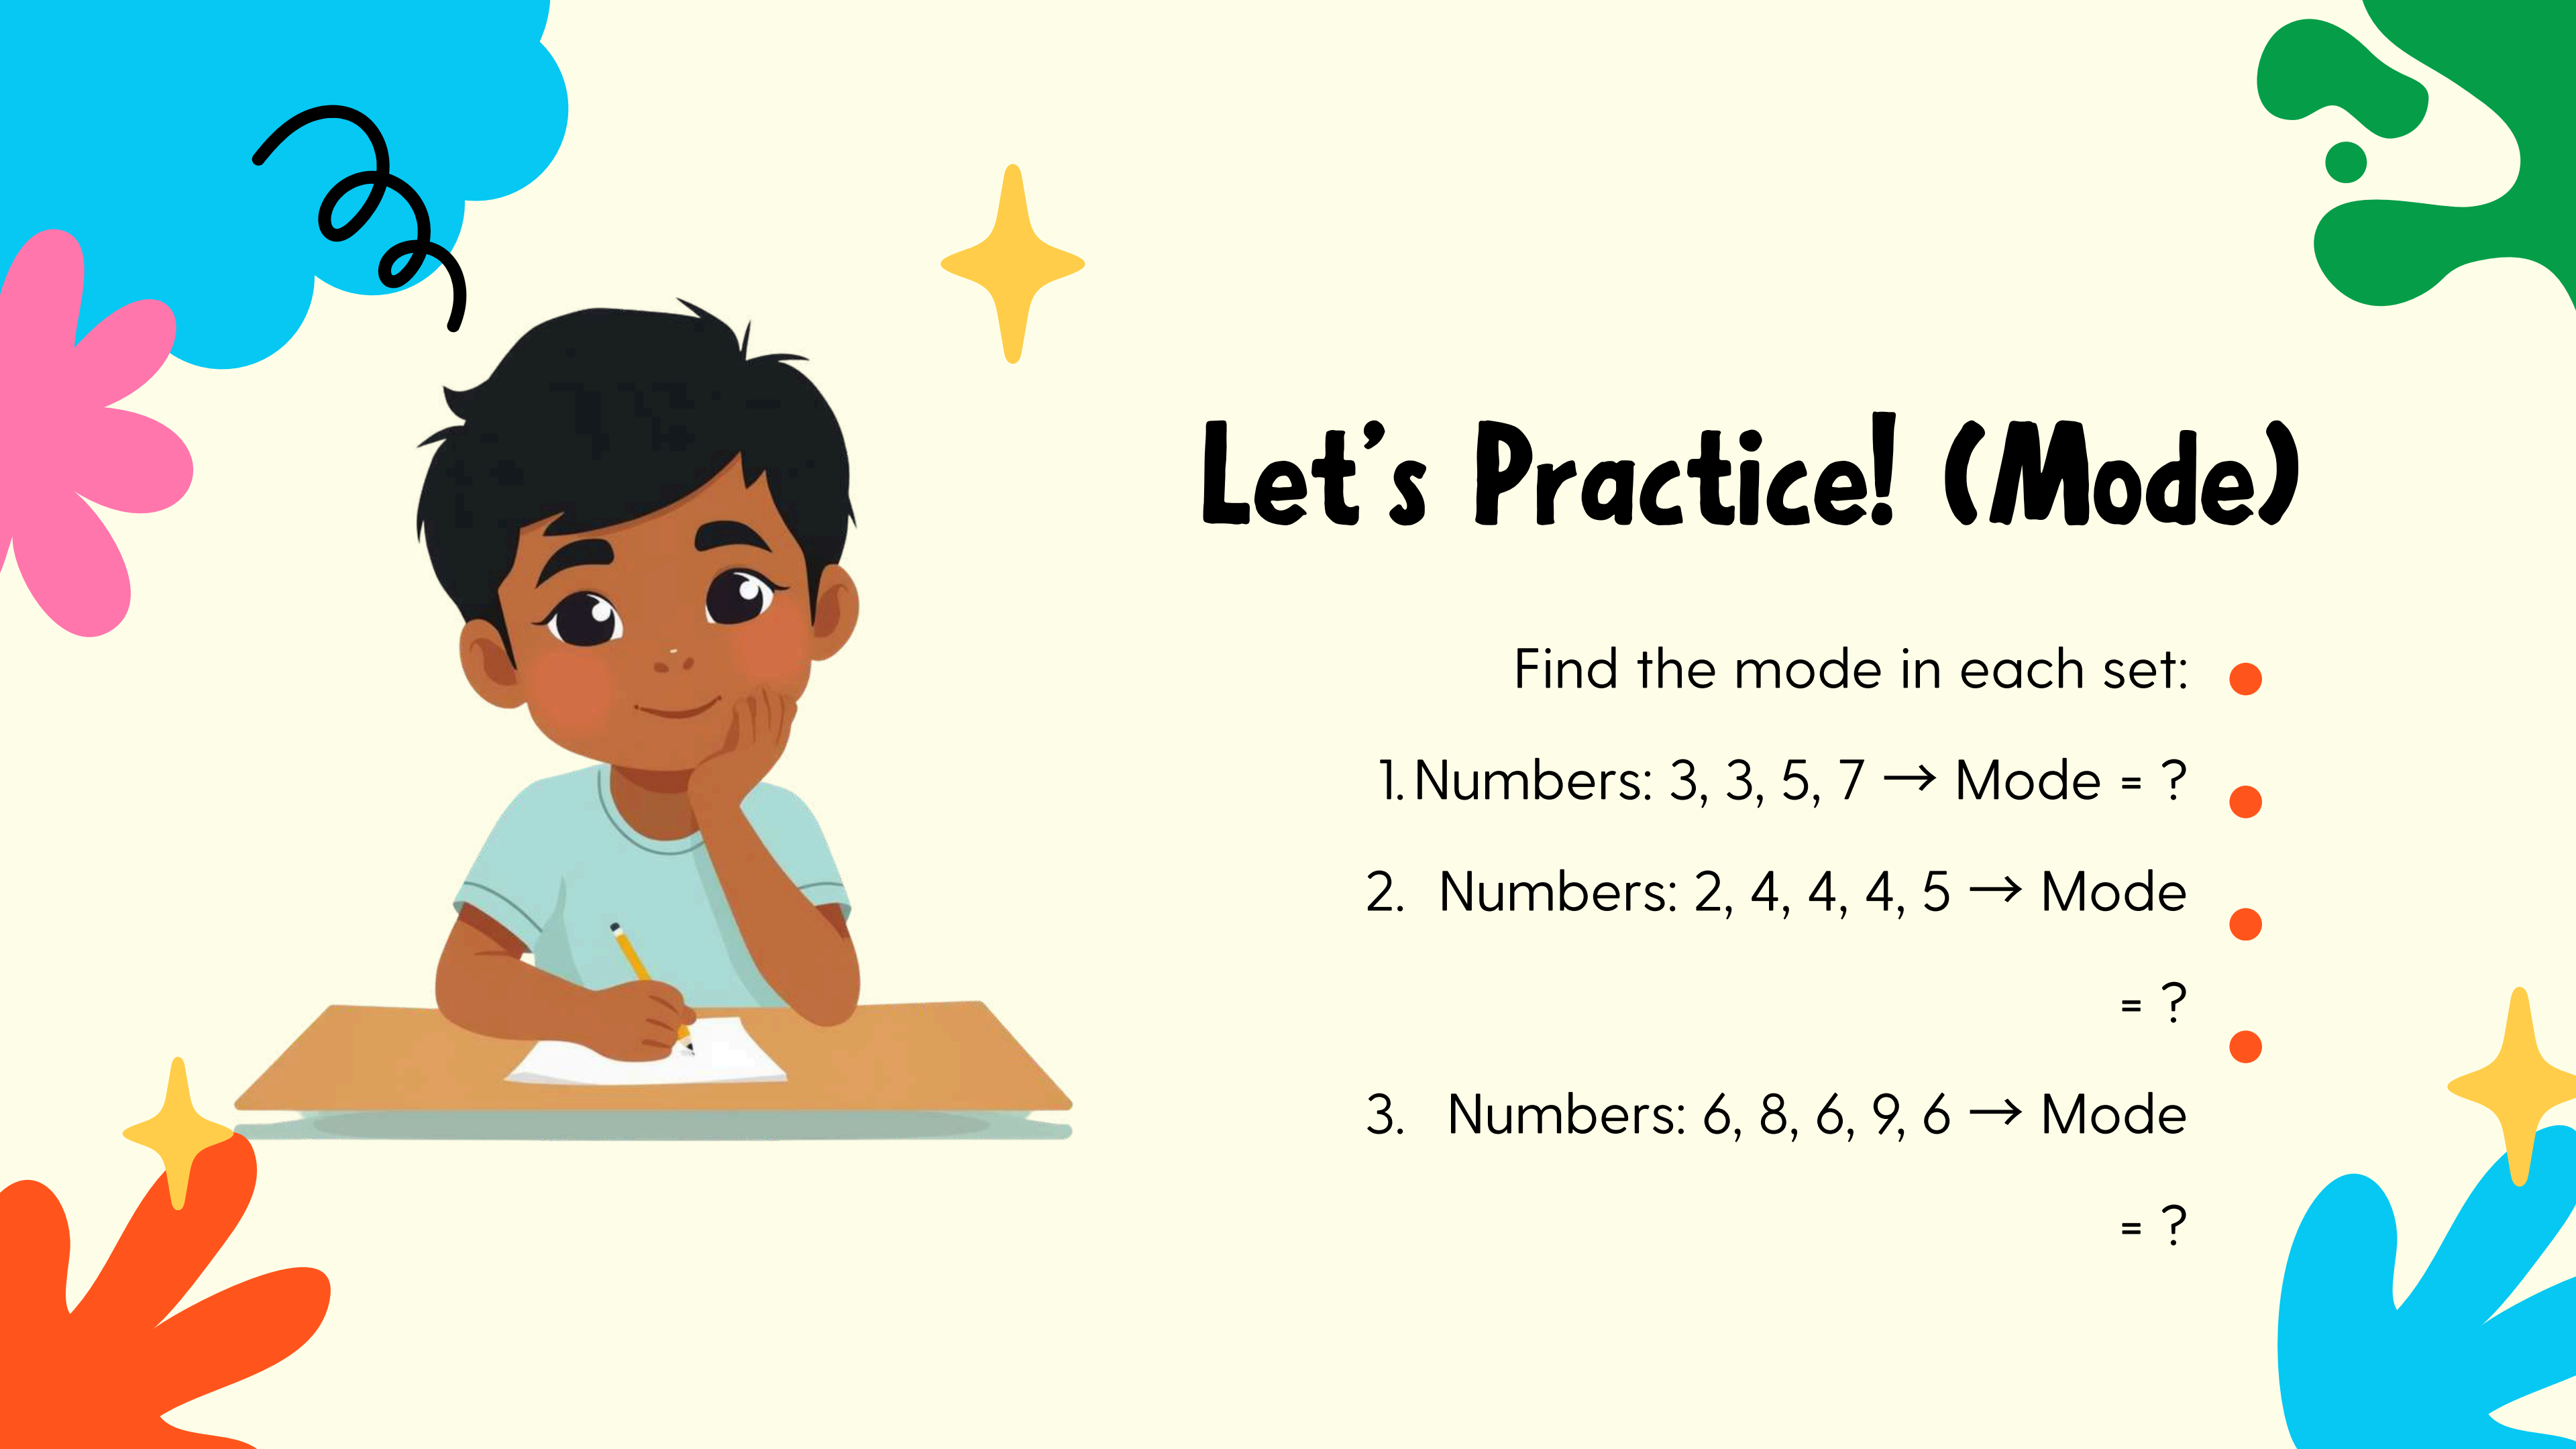

Numbers: 1, 4, 7, 8, 10 $\rightarrow$ Median ●

= ? ●

Numbers: 3, 6, 1, 8, 4 $\rightarrow$ Median

= ?

Let's Practice! (Mode)

Find the mode in each set: ●

1. Numbers: 3, 3, 5, 7 $\rightarrow$ Mode = ? ●

2. Numbers: 2, 4, 4, 4, 5 $\rightarrow$ Mode
= ? ●

3. Numbers: 6, 8, 6, 9, 6 $\rightarrow$ Mode
= ? ●

Real Life With *Mean, Median & Mode*

In school, we use mean, median, and mode every day! We find the average test scores, discover the most popular games at recess, and figure out the middle height in our class. Numbers are all around us!

What We Learned

Mean = average of numbers

Median = middle number in order

Mode = most frequent number

These help us understand numbers better!

Keep Practicing!

Great Job!

You did awesome! Keep practicing mean, median & mode. Ask your teacher to learn more!
