

My Files in the Sky

An Introduction to the Cloud

The Broken Phone Nightmare

What if you drop your phone in water or lose it? Are your photos gone forever?

Imagine this: You have hundreds of precious photos on your phone – birthday parties, family trips, funny moments with friends. One day, splash! Your phone falls into a puddle. Your heart sinks.

But wait! What if there was a magical place that kept copies of all your memories safe? That's exactly what the Cloud does – it saves your precious files safely, even when accidents happen!

The Cloud is Not a Weather Cloud!

The Cloud is NOT a cloud in the sky like rain or snow! It is a network of powerful computers stored in special buildings called Data Centers. Think of it like this: when we say "cloud" in technology, we mean huge rooms filled with computers that store your photos, videos, and apps safely. These computers work together to keep your digital stuff available whenever you need it!

Where is the Cloud?

The Cloud lives in giant buildings filled with computers called Data Centers. These buildings are like the digital apartments where your apps and files live! India has data centers in Mumbai, Hyderabad, and Chennai where your favorite apps store their data safely.

What is the Cloud? Our Digital Bank Locker

The Cloud is like a giant "Digital Bank Locker" for your data. Instead of keeping your gold (photos, files) at home, you keep it safe in a bank vault. You can visit any branch (device) and open your locker anytime. Your precious memories and important files stay protected, and you can access them from anywhere in the world!

Meet the Big Two: AWS & Azure

AWS (Amazon) – The Pioneer
Used by Netflix and many Indian startups
Data Centers in Mumbai & Hyderabad
Azure (Microsoft) – The Giant
Used by Indian offices and schools
Data Centers in Pune and other cities
Both are like digital landlords renting space for your
apps and files!

Benefits of the Cloud: Your Superpower!

Accessibility: Access your files from any device, anywhere, anytime – phone, tablet, or computer!

Scalability: Like an Indian wedding caterer who can easily serve 50 guests or 500 guests – the cloud grows with your needs!

Safety: Your data is protected safely in the digital bank locker, even if your device breaks or gets lost.

Activity Time: Pack Your Digital Suitcase!

Your Task: Decide which items belong in the Cloud and which stay on your device!

☁ Cloud Items: Photos, Emails, Games, Documents

💻 Local Device: Operating System, Hardware files

Imagine you're packing a digital suitcase for a trip. Some things travel with you everywhere (Cloud), while others must stay home (Device). Can you sort them correctly?

Apps Living in the Cloud

The Cloud in Action: Anywhere, Anytime

Imagine this: You start watching your favorite movie on Hotstar on your TV at home. Suddenly, it's time to leave for a family trip! No worries — just pause the movie, grab your phone, and continue watching from exactly where you stopped while traveling in the car. How does this magic happen? The Cloud remembers your progress and shares it across all your devices seamlessly. Your files and apps follow you everywhere!

Quick Quiz Time!

1. What is the Cloud?
2. Name two big cloud companies.
3. Where do cloud data centers live in India?
4. Which app uses the cloud? (Hotstar, Pencil, Bicycle)
5. Why is the cloud like a bank locker?

Summary: Your Cloud Superpower

The Cloud is a network of powerful remote computers stored in data centers around the world. AWS and Azure are the biggest digital landlords in India and globally, helping store and manage our data. The Cloud keeps your files safe and accessible from anywhere, on any device! Indian apps you love like Paytm, Hotstar, and Byju's use the cloud every single day to serve millions of users.

Thank You! Questions?

Thank you for joining Session 1 of "My Files in the Sky"! Ready to explore the Cloud further? Remember, your digital superpower is just beginning! Keep asking questions and stay curious about how the cloud keeps your files safe in the sky.

Planrs Academy | Session 1 | Future Tech & Infrastructure

Extra Resources & Next Steps

Keep exploring the cloud at home! Here's what you can do next:

- Explore your own cloud apps at home – find which apps save your data online
- Try the worksheet activity to practice Cloud vs Local sorting
 - Stay curious and ask your teacher more about the cloud!
 - Share what you learned with your family and friends
