

DOCKER: THE MAGIC TIFFIN BOX FOR YOUR APPS

**WHY DID THE GAME I
BUILT WORK PERFECTLY
ON MY COMPUTER BUT
NOT ON MY COUSIN'S
COMPUTER IN ANOTHER
CITY?**

THE "IT WORKS ON MY MACHINE" PROBLEM

DIFFERENT FILES

Apps sometimes break because computers have different files or settings installed.

WHY IT MATTERS

Understanding this helps us learn why Docker is so useful!

THE RECIPE ANALOGY

It's like sharing a secret family recipe that tastes different on your friend's stove!

THE SECRET FAMILY RECIPE ANALOGY

THE RECIPE PROBLEM

You give your friend the recipe for Special Masala Chai. It tastes perfect at your house but not at theirs because they don't have the exact tea leaves or ginger.

WHY DOES IT TASTE DIFFERENT?

The chai tastes different because your friend doesn't have the exact same tea leaves, fresh ginger, or special cardamom!

THE MAGIC TIFFIN BOX SOLUTION

What if you didn't just share the recipe but packed tea, ginger, sugar, and milk—all ingredients—in one tiffin box? That's exactly what Docker does for your apps!

Pack everything together and your app works perfectly anywhere!

THE PACKED LUNCH ANALOGY

COMPLETE TIFFIN BOX

Pack rice, dal, spoon, pickle,
and napkin all together in
one colorful tiffin box!

SAME TASTE EVERYWHERE

Your tiffin tastes exactly the same
at school as it does at home – no
surprises!

NO MISSING ITEMS

Nothing is forgotten – your
lunch works perfectly every
single time!

IMAGE

The stencil or blueprint with the design pattern. Just like a Rangoli stencil holds the beautiful design, a Docker Image holds all the instructions and files needed for your app.

CONTAINER

The actual Rangoli filled with vibrant colors on the floor! A Docker Container is your app actually running, created from the Image blueprint.

BLUEPRINT VS BOX SIMPLE DIAGRAM

DOCKER IMAGE – BLUEPRINT / RECIPE

Docker Container = Running Box

Think of it like this: The Image is your recipe card with all instructions. The Container is the actual dish you cook and serve!

DOCKER HUB: THE GIANT SHELF OF TIFFIN BOXES

Docker Hub is like a giant shelf full of ready-made tiffin boxes for different apps. Just like picking your favorite lunch box from a shelf, you can find and use apps that are already packed with everything they need!

Easy to find and use apps packed with all ingredients needed to run perfectly.

BENEFITS OF DOCKER CONTAINERS

Docker makes your apps work like magic! Here are the amazing benefits of using containers for your projects.

RECAP: DOCKER – PACK ONCE, RUN ANYWHERE

THE MAGIC SUMMARY

Docker helps you pack your app with all ingredients so it works perfectly on any computer. Just like a magic tiffin box that keeps your lunch fresh and ready anywhere you go! Remember: "Pack once, run anywhere!"

KEY TERMS TO REMEMBER

CONTAINERIZATION

Packing your app with everything it needs to run perfectly anywhere!

DOCKER IMAGE

The blueprint or stencil – your recipe that can make many containers!

DOCKER CONTAINER & DOCKER HUB

Container = The actual running lunchbox with your app inside. Hub = Giant store of ready-made app boxes!

YOUR TURN: QUICK QUESTIONS

THINK ABOUT IT

What does "It works on my machine" mean? Why is this a problem?

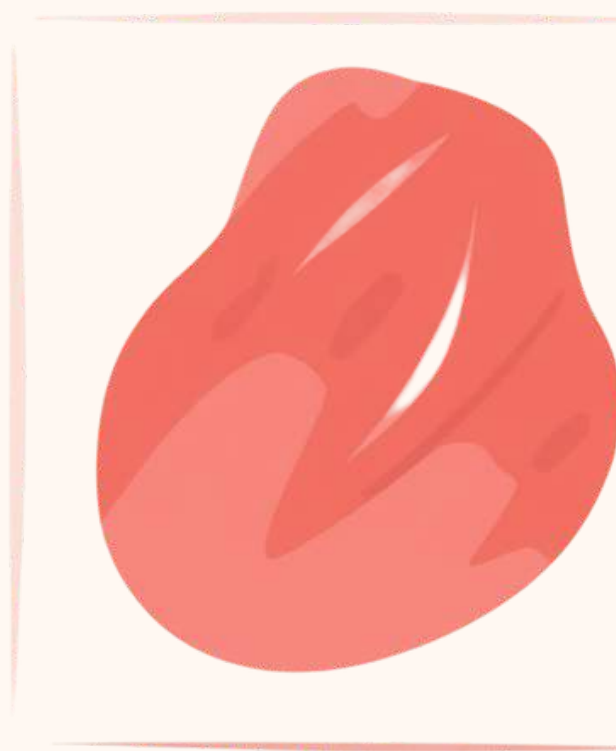

CONNECT

Why is Docker like a magic tiffin box for your apps?

REMEMBER

What is a Docker Image? Hint:
Think of the Rangoli stencil

THANK YOU & NEXT STEPS

Thank you for joining! Ready for Session 2?
