

ROUNDING & ESTIMATION

Fun with Numbers! ■
Grade 3 Mathematics

Learning Objectives

- Understand what rounding and estimation mean
- Round numbers to the nearest 10
- Round numbers to the nearest 100
- Use estimation in everyday situations
- Know when to use rounding vs estimation

■ What is Rounding?

Rounding means making a number **simpler** but keeping it **close to the original**.

For example: If you have **47**, you can round it to **50**!

■ What is Estimation?

Estimation is a way to make a **good guess** about a number or amount.

For example: If you see **48 apples**, you might estimate about **50 apples**!

Estimation helps us think about numbers quickly **without counting every single one**.

■ Why Do We Round and Estimate?

■ To make math easier and faster

■ To guess answers quickly

■ To check if answers are reasonable

■ Rounding to the Nearest 10 — The Rule

Step 1: Look at the **ones digit** (the last digit).

■ 5 or more → Round UP

■ Less than 5 → Round DOWN

Number	Ones Digit	Action	Rounded
43	3	Round DOWN ($3 < 5$)	40
47	7	Round UP ($7 \geq 5$)	50
65	5	Round UP ($5 \geq 5$)	70
32	2	Round DOWN ($2 < 5$)	30

⇒ ■ Practice Time! — Round to the Nearest 10

Round each number to the nearest 10:

Number	My Answer	Number	My Answer
32	_____	56	_____
78	_____	41	_____
95	_____	24	_____
67	_____	83	_____

■ Rounding to the Nearest 100

Step 1: Look at the **tens digit** (the middle digit of a 3-digit number).

■ 5 or more → Round UP

■ Less than 5 → Round DOWN

Number	Tens Digit	Action	Rounded
342	4	Round DOWN ($4 < 5$)	300
567	6	Round UP ($6 \geq 5$)	600
250	5	Round UP ($5 \geq 5$)	300
149	4	Round DOWN ($4 < 5$)	100

⇒ ■ Practice Time! — Round to the Nearest 100

Round each number to the nearest 100:

Number	My Answer	Number	My Answer
275	_____	823	_____
149	_____	660	_____
432	_____	751	_____
308	_____	555	_____

■■ Rounding vs Estimation

■ Rounding	■ Estimation
Makes numbers simpler by following specific rules.	Makes a good guess — can use rounding or other ways.
Example: 47 → 50	Example: About 50 apples
<i>Use for: Math homework, checking answers</i>	<i>Use for: Shopping, cooking, measuring</i>

■ Estimation in Real Life

We estimate when we **don't need exact answers** — like shopping or measuring.

Estimation helps us make **quick decisions** without counting every single thing!

Real-life examples:

- Estimating if you have enough money to buy snacks
- Guessing how long a car journey will take
- Counting how many students are in an assembly

⇒ ■ Practice: Estimation Problems

- 1 Estimate how many candies are in a jar if you see roughly 4 rows of about 12 candies each.

My Estimate: _____

- 2 Estimate the total cost if one toy costs ■20 and you buy 3 toys.

My Estimate: _____

- 3 Estimate the length of your pencil in centimeters.

My Estimate: _____

- 4 There are 48 students in the playground. Estimate to the nearest 10.

My Estimate: _____

- 5 A book has 93 pages. Estimate to the nearest 10.

My Estimate: _____

■ Fun Rounding & Estimation Quiz!

Q 1.	Round 64 to the nearest 10.	Answer: _____
Q 2.	Estimate the total cost if a book costs ■45.	Estimate: _____
Q 3.	Round 289 to the nearest 100.	Answer: _____
Q 4.	Round 155 to the nearest 10.	Answer: _____
Q 5.	Round 750 to the nearest 100.	Answer: _____
Q 6.	There are 327 books in the library. Round to the nearest 100.	Answer: _____

■ Summary: What We Learned

■ **Rounding** makes numbers easier using rules

■ We round to the **nearest 10** or **nearest 100**

■ **Estimation** is a quick, smart guess

■ Both help make numbers **easier to work with** in daily life!

■ You Did Amazing! ■
