

Colour Mixing Light Show

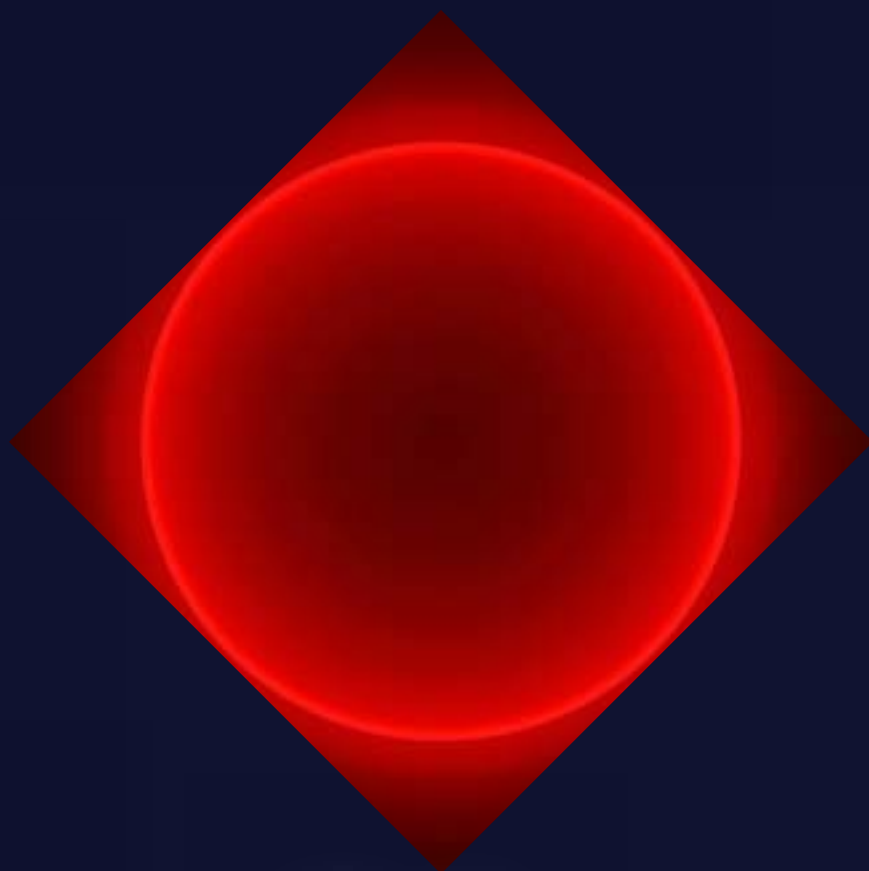

Discover Red, Green, Blue Lights!

A decorative border of stylized flowers and leaves in various colors (red, orange, yellow, green, blue, purple) surrounds the central text. The flowers have a glowing, ethereal quality with some petals showing internal structure.

White is All Colours Mixed!

Ready? Let's find out why white light glows!
Think of the bright Diwali LED lights glowing
at night – that beautiful white glow holds a
magical secret inside!

Meet the Primary Colours of Light

Red

Green

Blue

Primary Colours Can't Be Made by Mixing

- Red, Green, Blue are special colours. We cannot make them by mixing others!
- Look at the beautiful Diwali lights in Delhi and Mumbai – they use these special colours!

A decorative border surrounds the text, featuring stylized flowers and leaves in vibrant colors like red, orange, yellow, green, and blue. The flowers have multiple petals and some have small red dots on them. The leaves are elongated and pointed.

Let's Mix Two Colours!

Time to mix colours with cellophane sheets!

Watch what happens when we mix:
Red + Green, Red + Blue, Green + Blue
Surprise, surprise! What new colours appear?

A decorative border of stylized flowers and leaves in various colors (red, orange, yellow, green, blue, purple) surrounds the central text.

Red + Green = Yellow

Red and Green lights make Yellow!
Look at the beautiful yellow spotlights at
Durga Puja pandals – that bright golden
glow comes from mixing red and green
light together!
Amazing, isn't it?

A decorative border of stylized flowers in various colors (blue, green, yellow, orange, red) surrounds the central text.

Red + Blue = Magenta!

Red and Blue lights make Magenta!
Look at the beautiful pinkish-purple stage
lights at Navratri garba celebrations.
When dancers spin under these magical
magenta lights, the whole pandal glows
with festive joy!
Are waah! What a beautiful colour!

The background is a dark blue gradient. It is decorated with stylized, glowing blue and green flowers and leaves. In the top left, there are large, rounded blue petals. In the top right, there are similar blue petals. On the left side, there are green leaves with blue outlines. On the right side, there are blue leaves and a small flower with yellow and orange center. The overall theme is aquatic or tropical, matching the cyan color discussed in the text.

Green + Blue = Cyan

Green and Blue lights make Cyan! Look at the bright cyan floodlights at IPL cricket matches lighting up the stadium. The crowd cheers under glowing blue-green lights! Cyan is like the colour of a swimming pool or a peacock's feathers glowing bright!

A decorative border featuring stylized flowers and leaves in vibrant colors like purple, blue, green, and yellow, set against a dark background. The flowers have multiple petals and some have small red or orange centers. The leaves are elongated and pointed.

All Three Mixed = White Light!

Red + Green + Blue = White light!
When we mix all three primary colours of light together, something magical happens – we get bright white light! Look around your classroom at the LED bulbs shining above you. That's the power of mixing Red, Green, and Blue!

DARKNESS

No Light Means Darkness

When there is no light at all, we see only darkness! Think about a power cut at night – everything goes black. No red, no green, no blue light means no colours to see. That's why we call it "darkness" or black!

A decorative border surrounds the central text, featuring stylized flowers and leaves in vibrant colors like purple, blue, green, and yellow. The flowers have multiple petals and some have small red dots on them. The leaves are elongated and pointed.

Light vs Paint — What's Different?

- Light Mixing (Brightens Colours!)
- Mixing lights makes colours brighter!
Like Diwali LEDs glowing bright in the night sky!
- Paint Mixing (Gets Darker!)
- Mixing paints makes colours darker.
Like Camlin paints mixing into muddy colours!

Real-Life Lights in India — Festivals & More

- Diwali LED lights glowing everywhere – homes, streets, and markets sparkle with colourful lights!
- Navratri garba stages shine with bright spotlights, and melas and temple festivals glow with magical illuminations!

Real-Life Lights in India — Daily Life & Sports

- Traffic signals on Indian roads glow Red, Green, Amber! IPL stadium floodlights shine bright during cricket matches!
- Mobile and TV screens use tiny Red, Green, Blue pixels! Bollywood film sets sparkle with colourful lighting magic!

Let's Recap Our Glow Magic!

- Red, Green, Blue – The Light Trio! Mix them to make Yellow, Magenta, Cyan! All three colours make White light!
- Arre waah! You are Glow Wizards now! Keep exploring the magic of light!

Thank You!
Keep Exploring Colours!
