

SLIME LAB! THE MAGIC OF POLYMERS

Let's Make Your First
Slime!

WELCOME TO SLIME LAB!

Get Ready to Explore!

Today we're going to make something super cool – squishy, stretchy slime! We'll learn how mixing special ingredients creates something magical and gooey.

Science can be messy and fun at the same time!

WHAT YOU'LL NEED

Before we make our magical slime, let's gather all our supplies! Ask a grown-up to help you get everything ready.

White glue and Borax solution
(always with adult help!)

Food coloring and sparkly glitter
to make it fun!

HOW TO MAKE SLIME

Follow these simple steps to create your very own magical slime! Remember to ask a grown-up for help.

Pour glue into a bowl.

Add your favorite colors and mix well.

Slowly add the magic activator and stir!

THE SCIENCE OF SLIME!

What are polymers? They are long chains of tiny molecules all linked together – like holding hands with your friends in a long line!

Polymers are long chains of molecules linked together!

Is slime solid or liquid? It's both – how cool!

States of matter: solid, liquid, and gas!

Slime is special – it flows AND bounces!

LET'S EXPERIMENT!

Discover Slime Secrets

Time to play scientist! Try these fun experiments with your slime and see what happens.

Stretch it: Pull your slime slowly, then pull it fast!

Poke it: Poke it fast, then poke it slow. What's different?

Roll it: Can you roll your slime into a perfect ball?

YOU'RE A SLIME SCIENTIST!

Congratulations! You learned about polymers and states of matter. You discovered how liquids and solids can mix to make something stretchy and fun. Science is everywhere around you!
