

TIMES TABLE STOMP

Detailed Lesson Plan

Subject: Mathematics | Topic: Skip Counting by 2s | Duration: 30 Minutes

■ Lesson At A Glance

Grade Level	Year 1 – 2 (Ages 5–7)	Duration	30 minutes
Subject	Mathematics	Session Type	Kinaesthetic / Whole Class
Topic	Skip Counting by 2s	Resources	Slides, number line, open space
Curriculum Link	Multiplication readiness	Assessment	Observation + oral responses

■ Learning Objectives

Knowledge	Students will identify even numbers from 0 to 20.
Skills	Students will skip-count by 2s using physical stomping as a counting tool.
Understanding	Students will explain why skip counting by 2s always lands on even numbers.
Application	Students will apply counting-in-twos to real-life paired objects (chappals, eyes, idlis, bangles).
Engagement	Students will actively participate in call-and-response and partner counting activities.

■ Materials & Preparation

Materials Needed

- Times Table Stomp slide deck (14 slides)
- Projector or large display screen
- Floor space for stomping (push desks aside)
- Printed number line (0–20) taped on floor
- Stomp Star badges / stickers for celebration
- Optional: drum or clapping rhythm track

Advance Preparation

- Clear a 2m × 2m stomping zone in the classroom
- Tape the 0–20 number line on the floor
- Test slides and audio before class
- Write the Maths Stomp Pledge on the board
- Prepare Stomp Star badges for each child
- Print "Can You Guess?" worksheet (optional)

■ Lesson Timeline

Phase	Activity	Time	Slide(s)
Warm-Up	The Stomp Awakening – wake up feet, Stomp Roll Call	0:00–3:00	1–2
Concept Introduction	What Comes in Pairs? – body parts & everyday objects	3:00–7:00	3
Modelling	Skip Count in 2s – teacher demonstrates with stomps	7:00–9:00	4–5
Guided Practice	Join In Together – call & response, even numbers	9:00–12:00	6
Activity 1	The Idli Game – count idlis on plates by 2s	12:00–17:00	7
Activity 2	Can You Guess? – fill-in blanks, stomp the answer	17:00–20:00	8
Station Rotation	Stomp the Line / Counting Pairs / Stomp & Pass	20:00–25:00	9
Real-Life Links	Real Life Pairs – bicycles, friends, chappals, bangles	25:00–27:00	10
Cool Down	Slow stomp 0→20, discuss why we skip numbers	27:00–28:00	11
Celebration	The Maths Stomp Pledge + Stomp Star badges	28:00–30:00	12–15

■ Detailed Phase Breakdown

Phase 1 — Warm-Up: The Stomp Awakening (0:00–3:00)

Teacher Actions

- Greet students energetically: "Get ready — your feet are about to do MATHS!"
- Lead Stomp Roll Call: call each child's name, they STOMP STOMP and shout their name back.
- Do 8 counts of "shake your legs, wiggle your toes, get ready to move!"
- Introduce the concept: "Today we are going to count by TWOS using our feet!"

Differentiation: Seated students can pat thighs twice instead of stomping.

Student Actions

- Stand up and stomp twice when their name is called.
- Shake legs and wiggle toes to warm up.
- Listen and get excited for the maths movement session.

Teacher Tip: Keep energy HIGH. Use a loud voice and exaggerated stomps to model enthusiasm.

Phase 2 — Concept Introduction: What Comes in Pairs? (3:00–7:00)

Teacher Actions

- Display slide 3. Ask: "What things come in TWOS around us?"
- Point to each item (Eyes, Ears, Chappals, Hands) and lead the STOMP STOMP response.
- Chant: "STOMP STOMP — TWO! We all have 2 eyes to see!"
- Encourage students to think of more examples from their own lives.
- Bridge: "Every time we see a pair, we count TWO more — that's skip counting!"

Differentiation: Advanced: Ask "Can you think of something that comes in 3s? How is that different?"

Student Actions

- Call out examples of paired objects.
- Stomp twice and call out the item name.
- Connect the idea of "a pair" with the number 2.

Teacher Tip: Use chappals as a relatable Indian cultural hook — children will engage immediately.

Phase 3 — Teacher Models: Skip Counting in 2s (7:00–9:00)

Teacher Actions

- Display slide 4 (skip counting sequence 0–20).
- Model aloud: "2 (stomp)... 4 (stomp)... 6 (stomp)... 8 (stomp)... 10 (stomp)!"
- Point to the number line on the floor as you count.
- Emphasise: "Every stomp lands on an EVEN number!"
- Repeat twice — once at normal speed, once slowly.

Differentiation: Place TA or helper at the number line to physically point to each number jumped.

Student Actions

- Watch and listen carefully.
- Silently mouth the numbers along with the teacher.

Teacher Tip: Pause at 10 and ask "What comes next?" to check for prior knowledge.

Phase 4 — Guided Practice: Join In Together (9:00–12:00)

Teacher Actions

- Display slide 6. Lead call-and-response:
- "Whisper 1... STOMP 2!" (whole class stomps together)
- "Whisper 3... STOMP 4!" — continue to 20.
- Praise enthusiastically: "Your feet are doing MATHS right now!"
- Repeat the full sequence twice, increasing pace the second time.

Differentiation: Struggling students: partner them with a stronger counter to whisper together.

Student Actions

- Whisper odd numbers quietly.
- STOMP and shout even numbers loudly.
- Keep rhythm with the class.

Teacher Tip: The contrast of whisper/stomp helps children internalise the even/odd distinction organically.

Phase 5 — Activity 1: The Idli Game (12:00–17:00)

Teacher Actions

- Display slide 7. Explain: "Amma has put 2 idlis on every plate."
- "Each time I show a new plate, STOMP and say the total!"
- Plate 1 → STOMP STOMP → "2 idlis!"
- Plate 2 → STOMP STOMP → "4 idlis!"
- Continue to Plate 4 (8 idlis total).
- Extension: "If Amma adds 5 plates, how many idlis altogether?"

Differentiation: Early finishers can draw their own plate sequence up to 10 plates.

Student Actions

- Stomp twice as each new plate appears.
- Call out the running total of idlis.
- Connect multiplication readiness: groups of 2.

Teacher Tip: Idlis are a familiar, culturally relevant object for Tamil Nadu children — maximises engagement.

Phase 6 — Activity 2: Can You Guess? (17:00–20:00)

Teacher Actions

- Display slide 8. Read each sequence aloud.
- "2... 4... 6... ____?" — pause, then say "STOMP the answer!"
- Students stomp 8 times and shout "EIGHT!"
- Repeat for "0... 2... 4... ____?" (answer: 6)
- Repeat for "6... 8... 10... ____?" (answer: 12)
- Ask: "How did you KNOW the next number?"

Differentiation: Challenge: "Can you make your OWN missing-number puzzle for a friend?"

Student Actions

- Identify the missing number in each sequence.
- Stomp the answer and verbalise it.
- Explain reasoning: "I added 2 each time."

Teacher Tip: This phase is a quick formative check — observe who hesitates for targeted support.

■ Station Rotation Activities (20:00–25:00)

Station	Activity Description	Learning Focus	Group Size
■ Stomp the Line	Jump along a 0–20 number line taped on the floor, stomping on every even number.	Kinaesthetic counting, number sense	4–6 students
■ Counting Pairs	Count chappals, bangles, and cycle-wheel pairs. Record in a tally chart.	Real-world application, data recording	3–4 students
■ Stomp & Pass	Partners alternate counting — one says "2", other says "4", first says "6" etc.	Oral fluency, turn-taking, social maths	2 students (pairs)

■ The Maths Stomp Pledge (28:00–30:00)

"We are MATHS STOMPERS! (stomp stomp)

We COUNT in TWOS! (stomp stomp)

Our feet do MATHS! (stomp stomp)

And so do YOU!" (stomp stomp)

Recite the pledge together three times — slow, normal speed, then FAST! Award Stomp Star badges after the third recitation.

■ Home Connection

Send Home Activities

- Count Your Chappals — when you take them off, STOMP STOMP and count by 2s!
- Count Your Idlis — count breakfast idlis by 2s every morning.
- Find Pairs at Home — eyes, ears, hands, shoes, socks.
- Teach the Pledge — show family the Maths Stomp Pledge!

Parent Note (share with families)

- Today we learned to skip count by 2s using stomping.
- Even numbers are: 0, 2, 4, 6, 8, 10, 12, 14, 16, 18, 20.
- You can support at home by counting paired objects together.
- Ask your child to teach you the Maths Stomp Pledge!

■ Assessment & Success Criteria

Criterion	Emerging	Developing	Achieved
Skip count by 2s	Needs prompting for most numbers	Can count to 10 with some support	Independently counts 0–20 by 2s

Identify even numbers	Cannot identify even numbers yet	Identifies some even numbers	Correctly identifies all even numbers 0–20
Apply to real objects	Cannot connect pairs to counting	Connects pairs with teacher support	Independently counts real-life pairs by 2s
Explain reasoning	Cannot explain why numbers jump	Says "we skip one" with prompting	Explains "we jump by 2s / it's always even"

Formative Assessment: Observe during call-and-response (Phase 4) and the "Can You Guess?" activity (Phase 6). Note any students who hesitate or miscall numbers for small-group follow-up.

■ Teacher Reflection Notes

What went well today?	_____
Which students need follow-up support?	_____
Which activities generated the most engagement?	_____
Adaptations to try next time:	_____
