

WHAT IS AI?

AI is Everywhere! All Around Us

AI is all around us! Look around and you will find smart helpers everywhere - when you ask Google Assistant a question, when Mummy orders yummy food on her phone, or when you watch your favourite cartoons on YouTube!

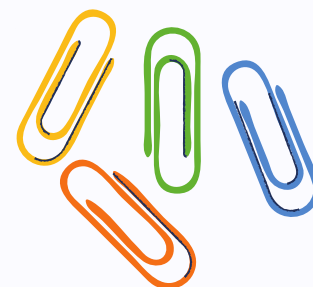

What is AI?

A Super-Smart Helper!

AI is a super-smart helper inside machines.
It can think, learn and decide because
humans teach it!

Just like your teacher helps you learn new
things, AI learns from people too!

AI is a Smart Helper

AI helps us every day in so many ways! It listens to what we say, shows us things we like, and makes our lives easier. Let's see some examples of AI helpers around us!

- ✔ Voice assistants like Alexa and Google Assistant answer our questions!
- ✔ Swiggy and Zomato suggest yummy food we might like!

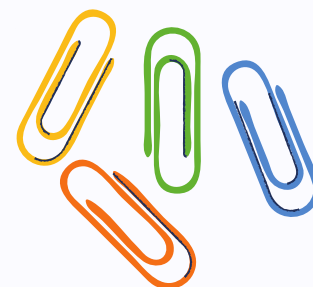

How Does AI Learn?

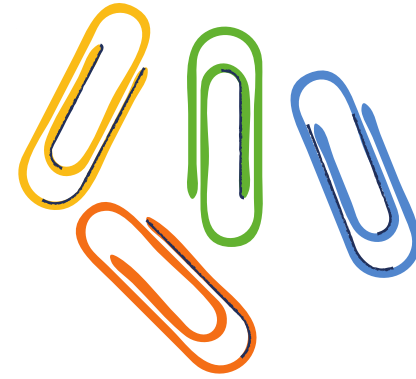

AI learns like you learn! When Mummy showed you many mangoes, you learned what a mango looks like.

AI also learns by looking at lots and lots of examples. The more it sees, the smarter it gets!

AI Learns from Examples

Face Unlock

Your phone learns your face! It sees many photos of you to unlock only for you.

Photo Groups

Google Photos groups all of Dadi's pictures together by learning her face!

Autocorrect

WhatsApp fixes your spelling mistakes because AI learned correct words!

AI Can See!

AI can look at pictures and understand what it sees, just like your eyes!

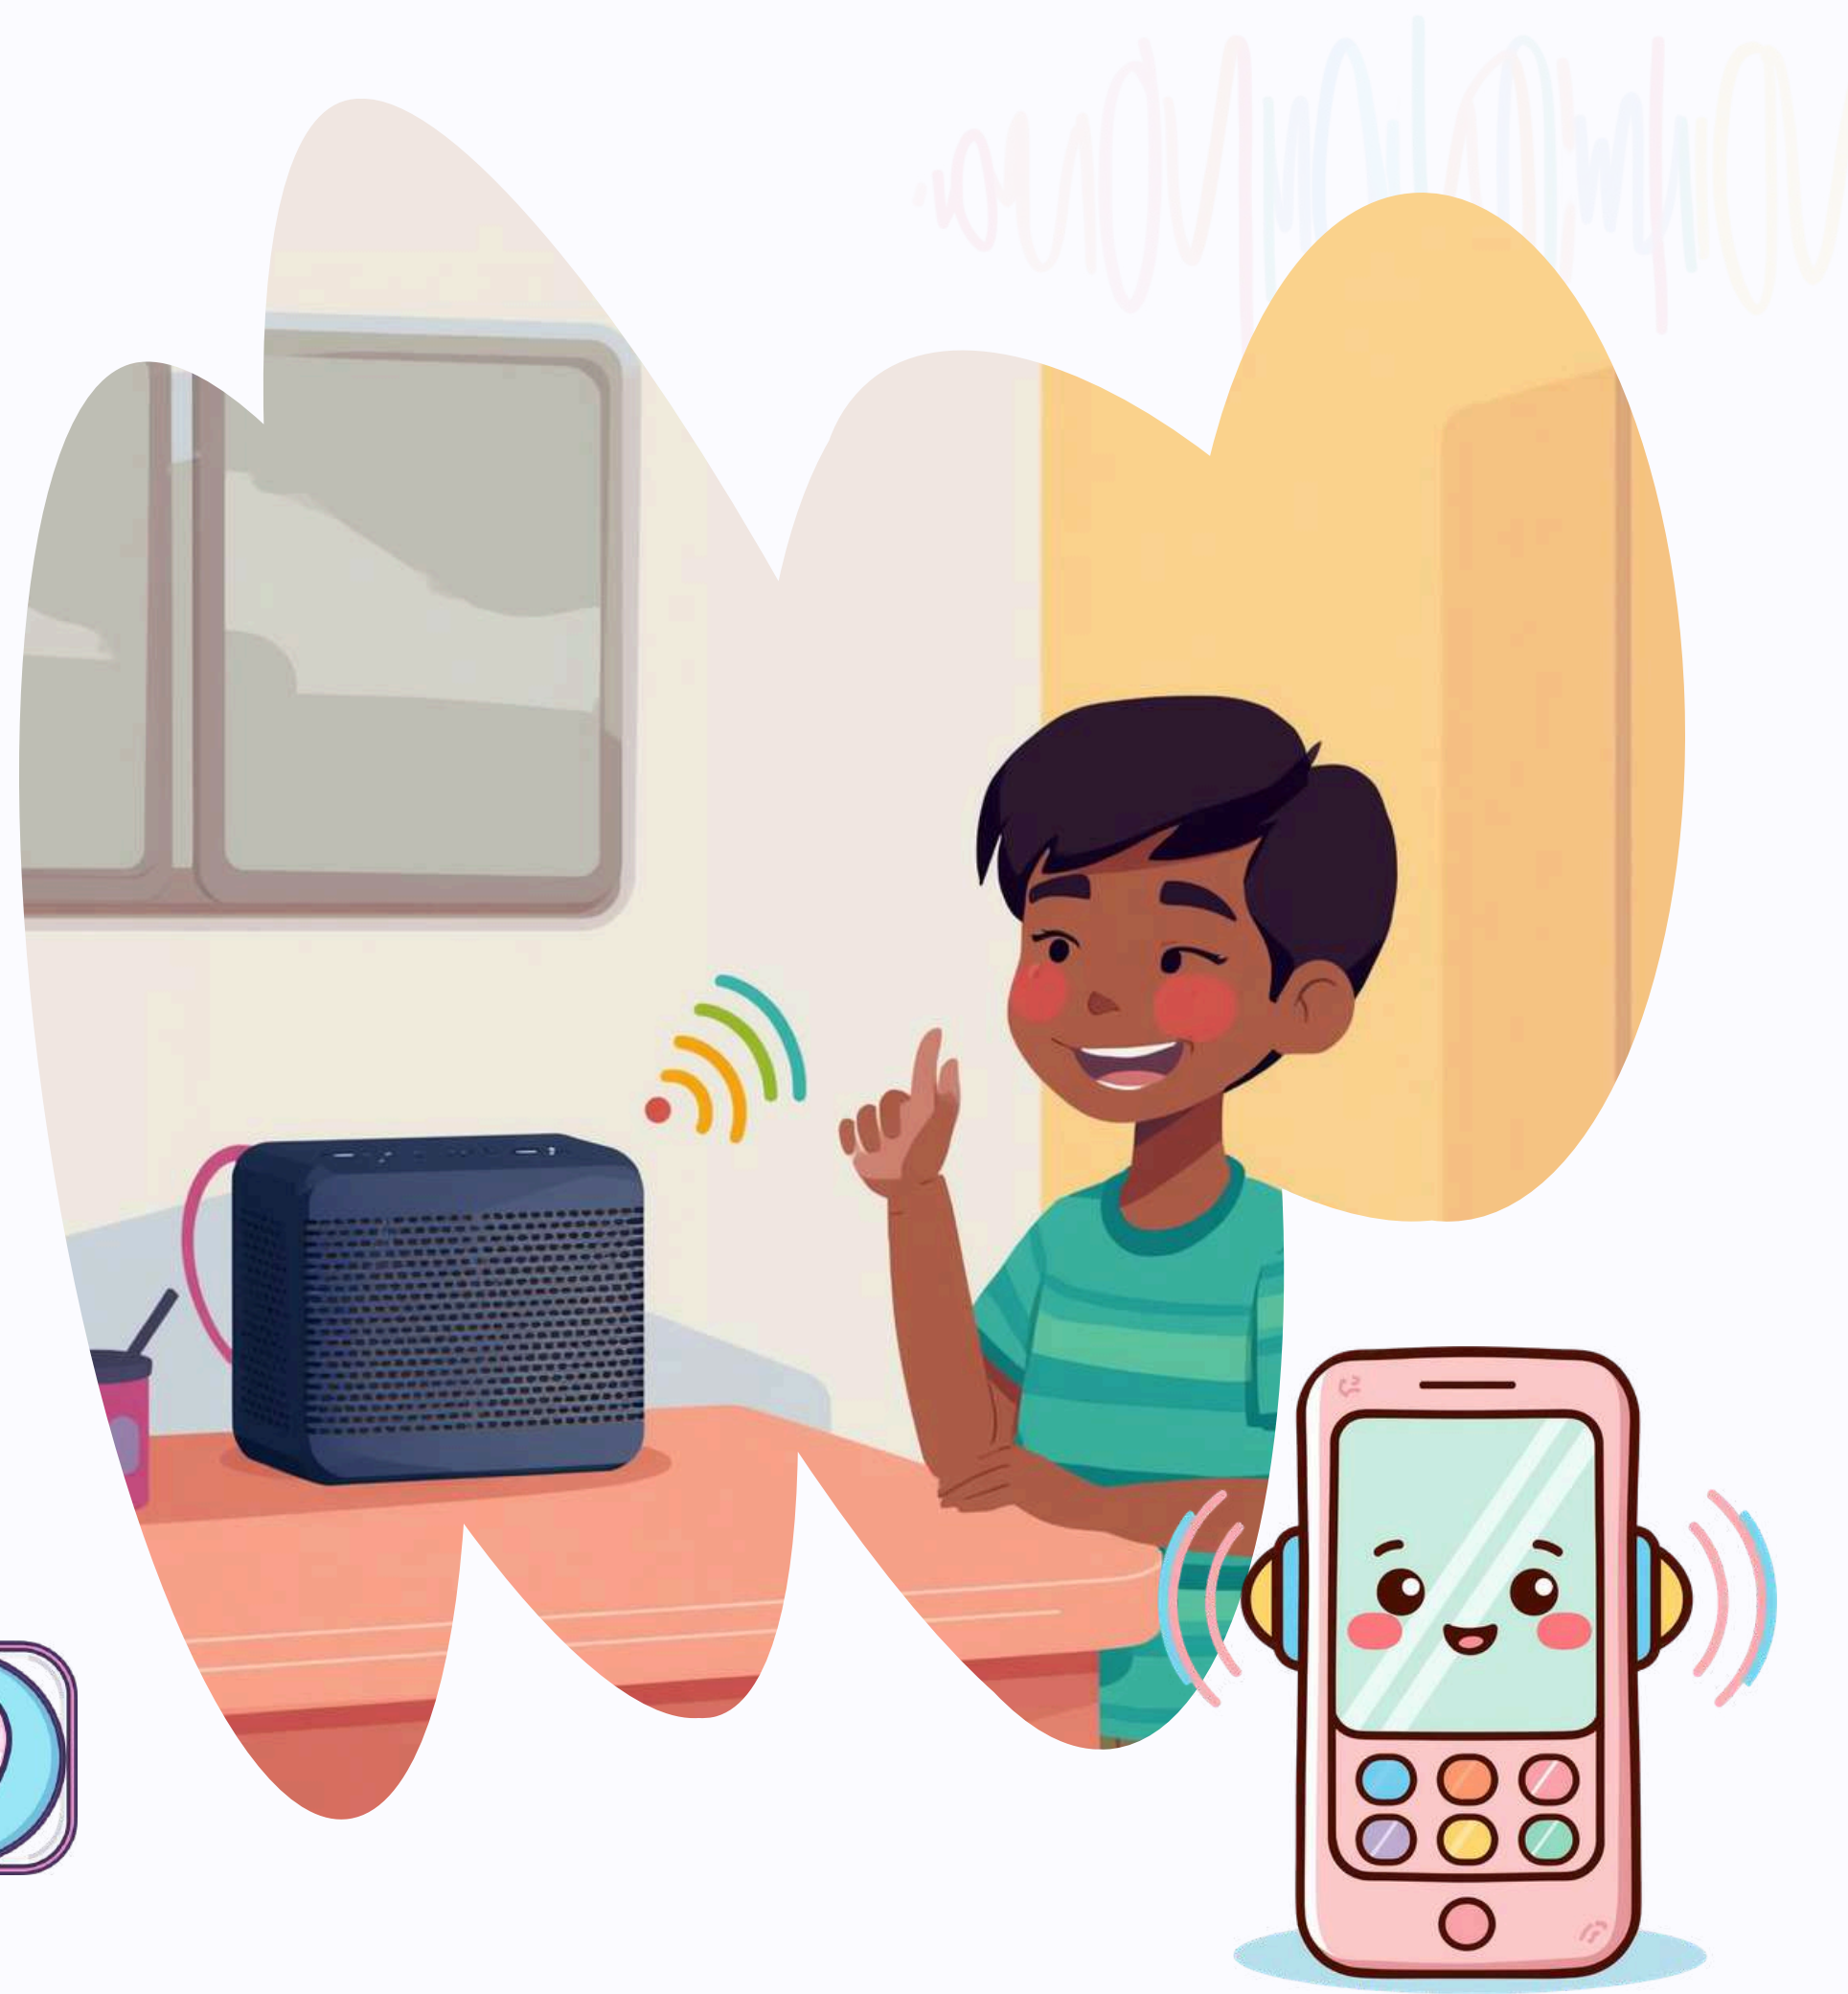

DigiYatra scans your face at airports. Smart TVs can see who is watching. AI helps find your family photos!

AI Can Hear! Voice Assistants Listen to Us!

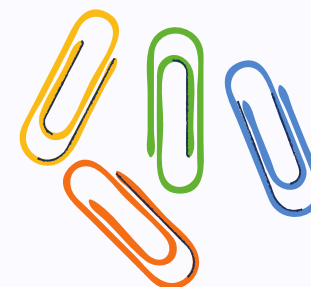

AI can listen to your voice and understand what you say! When you say "OK Google, play my favourite rhymes" - that's AI listening! Voice assistants on phones and smart speakers hear your words and help you find songs, answer questions, and even tell jokes!

AI Can Speak!

AI can talk back to us! When you say "Play Chhota Bheem" to your Smart TV, AI understands and plays it for you. Chatbots on bank websites answer your questions by typing back. AI uses its voice to help us every day!

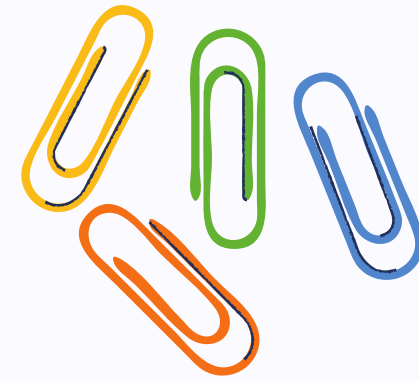

Who Makes AI?

Scientists and engineers build AI. They are very smart people who love to solve problems and help others!

AI does not eat or sleep, but it helps us solve big problems every day!

AI Helpers in India

Smart Traffic

Traffic lights change by counting cars and bikes on the road!

Weather Watch

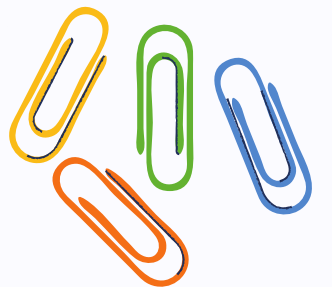

AI helps scientists predict floods and monsoon rains to keep us safe!

Doctor's Helper

AI helps doctors read X-rays and find sickness faster!

AI Around Us!

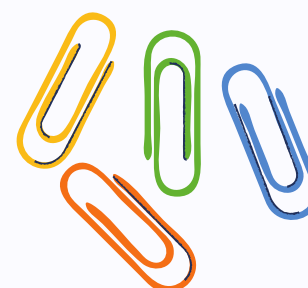

Story Time: Zara and the Lost Homework

Let's hear a story about Zara the Robot Owl
and her friends Meera and Arjun!

Get ready for an exciting adventure about
how AI helped solve a mystery!

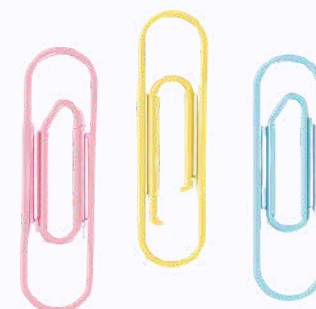

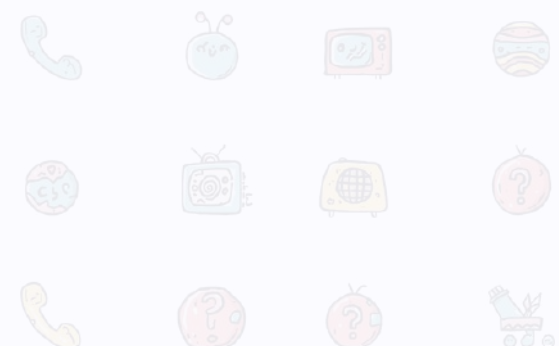

Quiz Time!

Are You an AI Detective?

Let's play a fun game! Look at different things and guess — does it use AI or not?

Think carefully about what you learned today!

- ✓ Which things use AI? Phone, TV, or a ball?
- ✓ Can you spot the smart helpers around you?

THANK YOU!

Every time you practice, you learn more!

Keep exploring and asking questions!
You're becoming smarter — just like AI!
