

FIZZ EXPLOSION — GAS IN REACTION! (THE BAKING SODA & LEMON VOLCANO)

THE THREE FRIENDS AROUND US

Everything Is Made of Three Friends!

Everything around us is made of three friends: Solid, Liquid, and Gas. Each one looks and feels different — but they are all around us every day!

Solid: Ice cubes, spoons, and bowls — they hold their shape!

Liquid: Water and Nimbu Ras — they flow and pour!

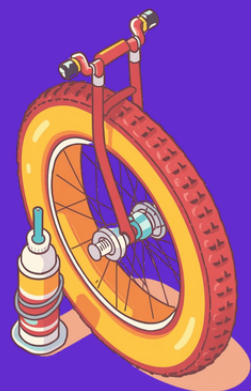

Gas: Fizz bubbles — like an invisible balloon puffer at the mela!

WHAT IS GAS?

Gas is All Around Us!

Gas is invisible but it takes up space and likes to move around. You cannot see it, but you can feel it! Think of air filling a bicycle tyre or balloons floating at a mela fair!

Gas is like an invisible balloon puffer — always moving and filling up space!

WHAT IS A CHEMICAL REACTION?

When Nimbu Ras (lemon juice) meets hot milk, something magical happens! The milk changes and becomes paneer and whey. This is called a chemical reaction — a special change that cannot be undone! Just like you cannot turn paneer back into milk, some changes are forever!

A chemical reaction creates something NEW — and it can never go back to what it was before!

PHHHSHHH! SOUND FAMILIAR?

Have you ever opened a chilled bottle of Limca or Thums Up? That big *Phhhshhhh!* sound and all those tickly, dancing bubbles rushing out — that is GAS escaping! The gas was hiding inside the drink, just waiting to burst free. The moment you open the cap, it zooms out in tiny bubbles — just like our fizz explosion with lemon and baking soda!

**Those tickly bubbles on
your nose? That is gas
saying Hello! 🫧**

THE MAGIC RECIPE — ACID + BASE = FIZZ!

Mix the Two and Watch the Magic!

Two special kitchen ingredients meet and throw a bubbly, fizzy dance party! Together, they make a brand new gas — Carbon Dioxide — that wants to escape and celebrate!

🍋 Lemon Juice (Nimbu Ras): The Sour Acid — tangy and zesty!

🥄 Baking Soda (Meetha Soda): The Soft Base — used in idlis and dhoklas!

🎉 When they meet: They throw a bubbly, soapy, fizzy dance party!

YOUR HOME LAB SETUP — STAY SAFE!

Gather your materials and get ready for the fizz experiment!
Always do this with a grown-up nearby!

🥣 Plastic bowl, small Katori & steel plate to catch spills.

🍋 1 fresh lemon & half spoon Meetha Soda (baking soda).

👨👩👧👦 Always do this with a grown-up nearby — Safety First!

FOLLOW THE STEPS!

Step 1: Set Up Your Base

Place your bowl right in the center of your tray.

Step 2: Scoop the Powder

Put 2 small scoops of white Meetha Soda into the bottom of your bowl.

Step 3: The Big Launch

Pour in your fresh lemon juice and watch your colorful foam volcano grow!

FUN FACT — MEETHA SODA IN YOUR KITCHEN!

Science is Already in Your Kitchen!

Meetha Soda helps make fluffy idlis, crispy bhaturas, and tasty dhoklas. It creates tiny gas bubbles that make the food soft and light — just like our fizz experiment!

**When you cook with your family,
you are a little scientist — just
like in our fizz experiment!**

QUICK QUIZ TIME!

Why does the mixture bubble up when lemon juice hits baking soda?
Choose the best answer below!

(A) The powder gets sleepy 🤤

(B) A new gas is born and wants to escape! 💧💧💧

(C) The water is boiling hot 🔥

THANK YOU & KEEP EXPERIMENTING!

See You Next Time, Junior Alchemist!

Thank you for joining us on this fizzy adventure!
Ask questions or share your fizz volcano pictures with your teacher or parents. Keep exploring the magic of science safely at home!

**You are a Fizz Sorcerer now
— keep experimenting!**
