

CHATBOT CONVERSATION — HOW DOES IT WORK?

A Fun Adventure with
Dev, Nia & Chiku

MEET DEV, NIA & CHIKU!

Namaste! Dev and Nia just found something amazing on their computer – a friendly chatbot named Chiku! Chiku can talk, answer questions, and even tell jokes!

Is Chiku alive? Or a magic genie inside the computer?

What do YOU think makes Chiku talk and reply?

WHAT IS A CHATBOT?

A chatbot is like a Kathputli puppet show at a mela. It talks and moves but cannot think on its own. A clever human wrote secret rules to make it work!

🎭 It talks, but follows secret rules!

📖 A human writes the Secret Rulebook.

🤖 [Chatbot] + [Secret Rulebook] = Magic!

THE MAGIC TIFFIN BOX!

Chatbots work just like a Magic Tiffin Box — each layer has a special job! Together, they help Chiku listen, think, and reply to you.

🍱 Top Tray = INPUT
You type a question to Chiku!

⚙️ Middle Layer = PROCESSING
Computer checks the secret rules!

🗨️ Bottom Bowl = OUTPUT
Chiku's friendly reply pops up!

➡️ The Flow:
Input → Processing → Output

INPUT LAYER – THE TOP SNACK TRAY

What is Input?

Input is what YOU type to Chiku!
Try typing: [Hello!], [How are you?],
or [Cricket]
Chiku listens for every word you
type!

A cartoon illustration of a young boy with dark skin and black hair, wearing a pink shirt, sitting at a desk. Above him is a large, light blue thought bubble. Inside the bubble, on the left, is the text 'Hello and Cricket' in a dark purple, rounded font. On the right side of the bubble is a grey rectangular tray filled with various colorful snacks, including fruit slices, pastries, and small cakes. The background is a vibrant purple with decorative elements: a white grid pattern in the top-left and bottom-right corners, a red swirl in the top-center, and a light blue cloud-like shape in the top-right.

**Hello and
Cricket**

PROCESSING LAYER

The Middle Rice Layer 🧠

Processing is like a robot brain checking secret match rules! If Chiku sees [Hello!], it searches the Secret Rulebook and sends back a friendly reply.

🔍 [Secret Match Rules] 🤖 [Robot Brain]

**Chiku scans your words
and finds the best match —
like a clever robot librarian!**

HUMAN FRIEND VS CHATBOT!

Are they the same? Let's find out! A human friend and a chatbot are very different. Can you spot the differences?

💡 Human Friend:
Listens with ears and hears
your voice.

🤖 Chatbot:
Reads typed words and
follows secret rules.

💬 Human Friend:
Thinks, feels, and can say
brand new things!

📖 Chatbot:
Can only say what it was
taught by humans!

THE SAMOSA SHOP COUNTER

How Chatbots Use Key Words

Say 'Samosa!' and uncle gives samosa. Say 'Jalebi!' and you get jalebi! Chatbots listen for special words to choose their answers.

HANDS-ON STUDIO SANDBOX ACTIVITY

Let's try talking to Chiku! Type words and watch what happens.

Step 1: Type [Hello] and watch Chiku's answer!

Step 2: Type [Festival] and see what Chiku says!

Step 3: Type [Cricket] and watch what Chiku says

OUTPUT LAYER – THE BOTTOM BOWL!

Chiku's Answer Pops Up!

Output is what Chiku sends back to you! When you type [Hello!], Chiku replies: "Namaste, friend!" The answer comes out like food from the bottom bowl of a Magic Tiffin Box!

**Chatbot Reply pops
up on your screen like
magic!**

THE BARFI TEST!

What if you say "Square Barfi sweet" to Chiku?

Chiku replies: "I am sorry, I do not understand!"

Chatbots only know what humans teach them. If no one taught Chiku about Barfi, Chiku gets confused!

[Does Not Understand] [Limited Knowledge]

Chatbots can only say what they are taught — nothing more!

INTERACTIVE POP QUIZ!

Test your Chatbot Smarts! Answer each question and earn a star. You can do it, young coder!

What does the input layer do?

Who writes Chiku's secret rules?

What happens if Chiku doesn't know a word?

QUICK REVIEW DISCOVERY MAP

For Parents & Guardians

Today your child learned about chatbots — friendly computer programs that talk to us! Here is a quick map of what was discovered in this session.

-  Chatbots are friendly computer programs — not alive, but very helpful!
-  They work like a Magic Tiffin Box: Input → Processing → Output
-  Chatbots follow secret match rules, just like a samosa shop uncle!
-  They can only say what humans have taught them — nothing more!

YOU DID IT, CODER!

Graduation Badge Unlocked!

- ✓ Clean up your workspace
- ✓ Share what you learned with family
- ✓ Keep exploring chatbots!
- 🏆 You earned the Junior AI Interaction Architect Badge!

Well done, young coder!
Keep exploring! ★
