

My Magical Water Cycle in a Bag! 🌞💧

Become a Window Scientist!

Hey Little Scientist! 🙌 Have you ever wondered where the big monsoon rain puddles go when they disappear? They don't just vanish—they go on a magical journey! Today, you are going to catch the water and make it **rain inside a real plastic bag** right on your window! 🎒

🧠 The 5 Magic Words to Know

1. Evaporation 🌞

Water gets warm from the sun and floats up into the sky like invisible steam! 2. Condensation ☁️

Warm water vapor cools down high up to make fluffy clouds or tiny water drops. 3. Precipitation 🌧️

Heavy raindrops falling back down from the sky as splashing rain! 4. Sun 🌞

The giant engine in the sky that warms up our water. 5. Cycle ↻️

A shape like a circle that goes round and round and never stops!

👯 The Water Cycle Dance! 👯

Do these moves with your friends to unlock the magic:

🙌 **EVAPORATION!** (Reach high up and wiggle your fingers like rising steam!)

☁️ **CONDENSATION!** (Bring your hands together over your head like a fluffy cloud!)

🌧️ **PRECIPITATION!** (Wiggle your fingers down fast like heavy falling rain!)

🎒 Your Science Pack Check-List

- ☐ 1 Clear Zip-Lock Bag (To see the magic happen!)
- ☐ Half a Cup of Water (100 ml) (Our mini ocean!)
- ☐ 1 or 2 Drops of Blue Food Color (To make it look like a real blue sea! 🌊)
- ☐ Strong Tape (To stick your bag to a bright, sunny window!)
- ☐ 1 Black Marker (To draw your beautiful sky!)

Let's Make Magic! (Step-by-Step)

Step 1 Color Your Sky!

Use your black marker to draw a happy, smiling **Sun** in the top corner, fluffy **clouds** in the middle, and wavy **ocean waves** at the very bottom of your bag!

Step 2 Fill Your Sea!

Carefully pour your half cup of water straight into the open bag. Try not to spill!

Step 3 Add the Magic Blue!

Squeeze 1 tiny drop of blue food color into the water. Swirl the bag gently. Look! You now have a bright blue ocean inside your bag! 🌊

Step 4 Lock it Tight!

Zip the bag completely closed from corner to corner. Ask your teacher or a partner to double check it so no water escapes! 🏠

Step 5 Window Magic!

Use strong tape to stick your beautiful bag up high onto a hot, sunny window. Now, let the warm Sun do its work!

★ Secret Scientist Discovery! ★

When you look closely later, you will see that while the water at the bottom is blue, the raindrops at the top are completely clear! That's because when water floats up, it leaves all dirt and color behind!

My Secret Science Log

When?	What does it look like?	What is happening?
Start (0 Min)	 Draw the quiet water	Water is sitting quietly in its blue sea.
Later (30 Min)	 Draw the fog & mist	Evaporation (Going Up!) & Condensation (Fog!)

When?	What does it look like?	What is happening?
End (60 Min)	 Draw the raindrops	Precipitation (Mini Window Rain! 🌧️)

🛑 Easy Rules for Little Scientists:

- Blue dye loves to stain clothes! Keep your bag over old newspapers when pouring.
- Make sure your zip-lock is locked like a fortress so your classroom books stay dry!
