

What is Scratch?

Scratch helps us tell stories and make games by giving instructions to characters called sprites. It is a fun and easy coding tool made just for kids like you!

Meet the Sprites!

Sprites are the characters or objects you can make move and turn in Scratch. You can choose a sprite from the library — like a cat, ball, or butterfly — or even create your own!

The Move Block!

The Move block tells your sprite to walk forward a certain number of steps. Try "move 10 steps" — the bigger the number, the farther your sprite travels across the stage!

How Move Works

Change the number in the Move block to make your sprite go farther or shorter!

"More steps = bigger move!"

The Turn Blocks!

Turn blocks tell your sprite to spin left
or right by some degrees.

- ↻ turn clockwise 15 degrees
- ↺ turn counterclockwise 15 degrees

The bigger the number, the more your
sprite spins!

Clockwise vs Counterclockwise

Clockwise means turning RIGHT 🔄 Counterclockwise means turning LEFT 🔄
Watch how your sprite faces a different direction each way!

How Turn Works

Turn 15° = a small spin.
Turn 90° = a big quarter turn!
More degrees means a bigger turn. Try
both and see how your sprite faces a
different direction each time!

Combining Move & Turn!

First turn, then move — or move and then turn! Use both blocks together to make your sprite travel in exciting paths.
Try it: turn 90° then move 50 steps!

Let's Try a Simple Code!

Open Scratch on your
computer or tablet

01

Add the "move 20 steps" block

02

Add the "turn right 90 degrees"
block

03

Click the green flag to run your
code

04

Watch your sprite turn and
move!

05

Fun Practice Activities

Move Forward & Backward

Use the Move block to make your sprite walk forward, then change the steps to a negative number to go backward!

Draw a Square!

Move 50 steps, turn 90 degrees — repeat 4 times to make your sprite draw a perfect square on the stage!

Turn Left & Right

Try turning left and right by different degrees — use 15, 45, or 90 degrees and see how your sprite spins!

Mix & Experiment!

Combine Move and Turn blocks in any order you like. Experiment and have fun — there are no wrong answers!

Review: Move & Turn Blocks

Move Block

Tells your sprite to walk forward a certain number of steps!

Turn Clockwise

Spins your sprite to the right by a number of degrees.

Turn Counterclockwise

Spins your sprite to the left. Combine blocks to move around!

Coding Challenge!

Can you make your sprite move in a circle?

Try turning a little and moving a little — many times!

Hint: Use the Turn and Move blocks together to trace a circular path on the stage!

Tips for Scratch Success

Take Your Time

Drag blocks slowly and carefully. There is no rush — coding is about thinking and trying!

Experiment & Have Fun!

Change numbers in your blocks and see what your sprite does. Every try teaches you something new!

Use Small Steps & Turns

Try moving just 10 steps or turning only 15 degrees to see what happens on the stage.

Ask for Help

If you get stuck, ask a friend, your teacher, or a parent. Coders always help each other!

Keep Exploring Scratch!

Coding is like magic — the more you
practice, the better you get!
"Every coder starts with a single block."

Thank You!

Great job learning Scratch Move & Turn!

Thank you for learning Scratch Move & Turn with us!

Do you have any questions?

Remember:

Every coder starts with a single block!

Keep exploring, keep coding,
and have lots of fun! 🎉
